H. E. Flint of Springfield, Mass., representing John Fenderson & Co. Inc., whose mills are located at Sayabec, P. Q., was in Toronto recently, calling upon the trade.

Mrs. Manbert, wife of A. C. Manbert of the Canadian General Lumber Co., Toronto, and daughter, left recently for California, where they will spend several months.

E. E. Hill, for a number of years foreman of the R. Laidlaw Lumber Co., died recently at his home, 33 Prince Rupert Ave., Toronto, aged 52 years. The remains were taken to Thornbury, Ont., for interment.

Loren L. Brown, of Toronto, B. C. Lumber Commissioner, has been visiting several towns and cities in Western Ontario. The Department of Lands has provided him with a handsome new motor car for making calls.

William Robertson, of Victoria, former acting Lumber Commissioner for the East, but now of the Forest Branch of the Department of B. C. Lands, is spending a short time in Toronto and other cities on a visit.

G. W. Heard, one of the oldest citizens, died at his home recently in St. Thomas, Ont., aged seventy years, after an illness of a year. He had been engaged in the lumbering business all his life. He was born at Angus, Ont., moving to St. Thomas while still a youth.

H. F. Gurney, recently appointed H. M. Assistant Trade Commissioner for Ontario, has arrived from Britain and has taken charge of the Toronto office in the absence of F. W. Field, who has left on an official visit to the United Kingdom for the next five or six months.

Wm. S. Loggie, M. P., of Northumberland County, N. B., was in Toronto recently on business. He is president and managing-director of the W. S. Loggie Co., and resides in Chatham, N. B. His firm operate lumber mills at Inkerman in Gloucester County and Kouchibouguac, Kent County, and have timber limits in Gloucester.

Thomas Long passed away recently in Toronto in his 85th year. He was a remarkable business man and identified with many interests. Mr. Long was one of the pioneers in opening up communication with Lake Superior ports and actively concerned in the development of inland navigation. He was the founder and president for a number of years of the Collingwood Shipbuilding Company, and was also indentified with the lumbering interest a number of years ago.

The death occurred recently at Parry Sound of Mrs. Isabella Beatty, widow of "Governor" William Beatty, the founder of Parry Sound. "Governor" Beatty, as he was always called, represented Welland in the Ontario Legislature when John Sandfield Macdonald was Premier. He resided with his father and brother at Thorold until 1863, when the Beatty brothers purchased the mill and limits from J. & W. Gibson & Co., Willowdale, and Mr. Wm. Beatty, with his brother John, began the settlement of Parry Sound, John leaving later, but William made this his home and lived to see the fruit of his labors in a beautiful and growing town. Mrs. Beatty is survived by one son, W. J. Beatty, who took his father's place and has since carried on his extensive business, and three daughters.

Why the North is Discontented

"'No wonder there is a feeling among the people in the northern country that some step towards secession should be taken," remarked J. J. Carrick, of Port Arthur in an interview recently. "Due to the timber investigation and the inaction of the Department of Lands, Forests and Mines, no permits or timber leases are being issued in Northern Ontario, and consequently no men are going into the woods. About this time of the year there are usually 4,000 or 5,000 men in the bush taking out ties and pulpwood and carrying on other operations. At present, however, practically everything is at a standstill."

Many Lumbermen Elected in New Brunswick

(Continued from page 57)

John L. Peck is a director of the Albert Lumber Co., Hillsboro and a member of the Lewis Peck Co., general merchants. He is interested in lumbering, woodworking and mercantile interests as well as banking and was first returned to the Legislature in 1907.

James K. Pinder, who resides at Pinder, has long been associated with the lumber and milling business. He was first elected to the Legislative Assembly in 1892 and was returned three years later. He was unsuccessful in 1898. Ten years later he returned to public life and has been an active member of New Brunswick legislative circles.

George B. Jones, Opposition candidate in King's County, was elected as a new man in the political life of the province, and is largely interested in lumber operations.

B. Frank Smith is a successful lumberman and produce merchant who resides in East Florenceville. He was first made M.L.A. for Carleton County in 1915. Mr. Smith has enjoyed an unusually successful business career and is one of the best known members of the Legislature.

Pertinent Pointers for the Lumberman

Some dealers who would never take a nickel not belonging to them will cheerfully grab a cash account they are not entitled to.

To enlarge the State Forests of Pennsylvania as rapidly as possible so that eventually the 5,000,000 acres comprising the Pennsylvania Desert may be converted into profitable timber producing areas, is the policy of State Forester, Gifford Pinchot.

Every friend is one less enemy.

The education that stops is a poor thing.

The value of thought lies only in its accomplishment.

Learn to lose yourself in the business of the firm and your future is made.

When in the right you can afford to keep your temper and when in the wrong, you can't afford to lose it.

Some lumbermen who have been barely able to keep their heads above water are the longest in giving advise as to how a competitor should run his business. And the funny thing is they don't apply their own advice right at home. It reminds us of that old story about the mote and the beam.

The famous cedars of Lebanon were almost wholly destroyed during the world war, according to a writer in a San Francisco periodical. The trees date back to the earliest times. They were historic during the wars of Sennacherib, 608 years before Christ, as described in the psalms of David.

Skidway of rossed hard maple logs belonging to the Pearce Co., Marmora, Ont.

Miscellaneous

Auction Sale of Timber Licenses

UNDER AND BY VIRTUE of the powers contained in a certain hypothecation which will be produced at the time of sale, and under and by virtue of all other rights and powers thereunto enabling, there will be offered for sale by public auction on Saturday the 20th day of November(1920, at the hour of eleven o'clock in the forenoon by C. M. HENDERSON & CO., AUCTIONEERS, at their premises, 128 King Street East, in the City of Toronto, the following property, namely,—ALL THOSE CERTAIN LICENSES to cut timber in and upon certain portions of the Township of Proctor and on the North shore of Lake Huron, which licenses are known respectively as Numbers 90 and 91 of the Season 1920-21 and being Berth No. 142 in the said Township of Proctor and Berth No. 143 on the said North shore of Lake Huron, each parcel containing an area of thirty-six square miles more or less, as set forth and described in the said licenses, saving and excepting thereout all such lots or parcels as are thereby excepted.

The limits for which these licenses are held are said to be favorably situated and easy of access. It is reported that there are upon the limits fifteen million feet of Hemlock; four million feet of White Pine and ten million feet of hardwood, suitable for manufacture into lumber.

TERMS: Ten per cent. of the purchase money to be paid down at the time of sale and the balance to be paid within thirty days, without interest.

The licenses are offered for sale subject to all the conditions and regulations of the Department of Lands, Forests and Mines of Ontario affecting the same.

The licenses will be offered for sale in one parcel and subject to a reserved bid.

Further particulars, terms and conditions of sale will be made known at the time of sale or upon application to Messrs. Johnston, McKay, Dods & Grant, Traders Bank Building, Toronto, Solicitors for the vendors.

DATED at Toronto this 30th day of September, 1920. 20-22

Auction Sale of Timber Berths

The undersigned has received instructions to sell by public auction at Orillio on **Tuesday, November 23,** at 2 p.m., two excellent timber berths in the Township of Ballantyne, District of Nipissing.

These two berths comprise 26½ square miles. They are situated just east of South River and within six miles of Wasing Station on the Canada Atlantic Railway. Parts of the berths lie within the boundaries of Algonquin Park.

The pine on these limits was taken off years ago, but the other timber has never been touched. An estimate prepared for the Department of Lands, Forests & Mines places the amount of timber on these two berths as follows:—

Berth No. 2, Ballantyne

10,000 feet Pine
7,415,520 " Hemlock
8,533,500 " Birch
125,500 " Ash
748,000 " Soft Elm
18,000 " Basswood
215,000 Cords Chemical Wood
20,860 Telegraph Poles
60,000 Railway Ties
2,300 Cords Spruce.

Berth No. 4, Ballantyne

150,000 feet Pine
5,500,000 " Hemlock
13,500,000 " Birch
750,000 " Ash
600,000 " Soft Elm
125,000 " Basswood
130 Cords Chemical Wood
25,000 Telegraph Poles
100,000 Railway Ties
7,000 Cedar Telephone Poles

These figures are believed to be conservative.

Further particulars on application to

Geo. H. Clark
21-22 Orillia

Review of Current Trade Conditions

Ontario and the East

While conditions in the lumber arena are quiet at the present time and the majority of firms report little business doing, a number declare that trade is spotty and spasmodic. On the whole they have been enjoying a fair car sale each week, but, of course, the aggregate is not nearly as large as in normal times. There is a great deal of speculative discussion regarding prices, and the questions heard on all sides is will values rise, fall or become stabilized.

The lumber market at the present time is a declining one so far as quotations are concerned, and how low prices will go remains to be seen. There is a firm impression that they will never get down to anywhere near pre-war standards. Of course, last spring when the clamor for hardwoods of all kinds was most insistent, there was a great deal of jockeying and what one might almost term as curb-brokering in certain lines of hardwood than were in great demand. Wood- using industries were all rushed to the limit and were calling for supplies which, in many cases, owing to the shortage of stocks, could not be met. Not a few firms gave their buyers injunctions to procure the grades and quantities required irrespective of price, and an orgy of excitement and speculation set in. Then came a quieter period in the lumber line and the demand from the United States hardwood consuming centres fell off considerably. Furniture factories became quiet, the automobile business rapidly decreased, piano manufacturers were running on short time and even phonograph plants ceased to call for heavy supplies.

Speaking of the hardwood situation generally, a leading wholesale lumberman stated this week that the American yards in many instances were stocked to the limit, that there was little or no demand and would not likely be any until after the presidential elections or early in the year. So far as local requisitions are concerned, he said they are only about half of normal. In regard to diminishing values, he added that they would never return to 1914 basis, but that he expected the figures, which ruled in 1919 on northern hard and softwoods would, possibly, be reached in the near future. The old low levels would never be ushered in again for the simple reason that costs of production were bound to remain high, railway rates had ascended materially and general overhead and distribution expenses, while they might come down, would never get back to ante bellum days. Various views are heard with regard to the future. Some observers of the situation declare that, while prices may be shattered at the present time in hardwoods, they are bound to come back with a vengeance, and will go even higher than they did in the spring of 1920 when the increase ranged from 100% upwards to as high as 300% over the rates which prevailed in 1918 and the beginning of 1919.

In respect to the softwood market, conditions remain unchanged. There is not much shipping going on to the other side and the retail dealers are simply marking time until they get rid of some of their high-priced stocks. White pine is holding its own, but very few cars of B. C. forest products are being sold. The high freight rates which have not altogether been adjusted or absorbed by all the mills, are causing consumers to wait awhile. Then southern pine is being offered at ridiculously low prices; in fact, the country is being flooded with circulars making such quotations for all grades and sizes as were not dreamed of three months ago. With some American firms it appears to be a case of desiring to unload at any cost.

In this issue the "Canada Lumberman" presents opinions from representative manufacturers in various parts of eastern Canada, showing that the cut will be somewhat curtailed and quite a few firms will not get out as many logs as last year. While wages in the woods are stiff at the present time and in some instances fully $10.00 higher than last season, it is expected that there will be a recession before many weeks are over.

Owing to the fine fall weather a number of mills, which usually have closed down by this time, are still operating, but, generally speaking, the majority of the plants will finish cutting about the 10th or 15th of November. Much depends upon weather conditions. When the mills are closed down and the harvest hands return from the west, it is expected that there will be a surplus of woods labor. Exaggerated reports are heard respecting labor and camps, which cannot be verified. One is to the effect that a leading concern reduced the wages of its men from $70.00 to $50.00, and that they were glad to remain on at this figure, while another rumor is that some thirty camps had been closed in northern Ontario. While there may be a modicum of truth in these allegations, much is often gained or lost in the telling, and in quiet times the tendency is to paint the picture a little darker than it really is.

Eastern firms have received word from the Coast to the effect that the shingle situation is not at all active, and that a large number of mills had closed down. It was also stated that by the end of the month a big percentage of the sawmills would become inoperative owing to lack of business and that a majority of the logging camps would also be shut down.

In the yards around the mills stocks are not heavy, and as business is quiet and not many orders coming in, there is, declares a western authority, not much possibility of the plants opening up again until more business is in sight from the east and also the United States. The banks will not finance the mills to go on cutting and pile stock in the yards, so there is nothing for them to do but shut down. Under these conditions it may be expected that prices will not go lower as the orders that are likely to come in will take care of the mills that are operating. The tide-water mills here are very active at the present time owing to export business. The other mills that will continue to operate are those in the interior and on the island, who have their own timber and mills adjacent to same, and can obtain their logs cheaply.

United States

Business in the lumber line is very quiet at the present time and it is not expected there will be any activity until after the elections. Everybody is sitting tight and waiting the outcome of the great political struggle. Various opinions are expressed regarding the trend of lumber prices. Many think the bottom has been reached; others are confident that rates will go lower, while not a few assert that as soon as a sturdy demand sets in again, quotations will go higher than at any period since the war. There is a variety of views, and one may select from the multitude exactly what suits his or her own individual taste. The hope is not only expressed but also confidence that by the first of the year the requisitions for lumber will materially increase and prices advance. This optimistic prediction is based on radical curtailment in supply. The majority of the mills on the Coast have either shut down or radically reduced their output. Logs are very scarce and the limited available supply has been increased.

Commenting upon the general trend of things, a western contemporary says: "It is a very common thing these days to hear or read that the country is going through a period of liquidation and that when the process is completed the economic, industrial and business situation will improve. It has been pointed out by a well known lumberman, who is something of a student of such things, that "period of liquidation" is the new term for what formerly was called "panic," and he says that the present situation would be a real panic were it not for the steadying influence of our present banking system. So far as business is concerned, and the lumber business in particular, he says that the effect of this period of liquidation is much the same as was the effect of what we used to call a panic.

Be that as it may, it is certain that the country is passing through some sort of a period, which is not altogether satisfactory to anybody. In one large city, where there are probably more skilled mechanics than at other points, thousands of them are temporarily out of work because the industry in which they were employed is suffering from the period of liquidation. What is true of that city is more or less true of other cities.

But even the depression of the present cannot dim the hope that trade will be better before the end of the year. This hope is based on the known fact that construction work is needed and on the expectation that the banks will soon make it easier for builders to get money for legitimate enterprises.

If hardwood lumber prices were inordinately high last spring, they have now gone to the other extreme, and some of the offerings are made at prices below the cost of production. Not only are mills losing money at some of the prices at which stock is being offered and sold, but many a wholesaler is obliged to take less for his lumber than he paid for it. Of course, this is not true, either in the case of the mills or the wholesalers on all of the business done, but as a general thing the man who has a stock of hardwood lumber will be money ahead if he refuses to sell it at the current market. One consolation lies in the fact that the bottom has probably been reached

and if any demand makes its appearance there will be a reaction. Factory consumers are known to be low in supply of raw material. They are buying a little to keep them going on business on hand, of which there is not much . But with any increase in the demand for finished products they will be forced into the market. Stocks of hardwood lumber, both at northern and southern mills, are below normal, and many mills have announced a programme of curtailment until the market revives. This makes certain that the supply will be short if the demand approaches normal.

Great Britain

Owing to the acute industrial situation, the number of strikes, and general labor agitation which has been going on during the past few weeks, business is largely at a standstill and nothing new will likely develop for some time. The outlook is rather uncertain. Were it not for the labor troubles which constantly crop up, it is believed that business would speedily improve and that there would be a revival in demand. Prices have been holding fairly firm but there is little new in the general conditions.

Recent advices from Liverpool state that while the imports during the present season reckoned on the standard basis cannot approach in any way the aggregate of prewar days, still when present values are taken into consideration the story is one of a different nature. With values at their present enhanced figures and profits nowadays invariably beyond the meagre margin ruling prior to the war, most of the importers are quite content to handle hundreds of standards whereas previously any season's total yearly imports for the particular firms reached a total of many hundreds of standards.

Speaking of the freight outlook, the "Timber News" of London says:—It is very pleasing to learn of the reductions being made by a large number of shipowners. America seems to be setting the pace. She is evidently bent on securing as much business as possible for her new carriers, and in order to secure it is ready to make concessions in rates far greater than most people would have believed a few months ago. Many of the German shipping concerns are also amalgamating with a view, no doubt, to cutting rates. Shipowners in this country are therefore none too sanguine as regards the future. There is indeed a prospect of lower freight all round, which should mean not only cheaper wood, but also cheaper food and clothing. Shipowners are gradually coming down from their pedestals upon which they have stood far too long.

Questions in the British House of Commons recently elicited that fact that under the Housing Acts 10,042 houses had been constructed and 59,320 were now in course of construction.

Business in the timber trade has proved dull lately, transactions reported being few in number, and mostly of an unimportant nature. Buyers have shown a disposition to await developments in the coal situation before entering into further commitments, but even apart from the effect exercised by that unfortunate trouble, it has to be admitted that the tone of the market is not healthy. The stocks on hand are uncomfortably heavy and with the comparative lack of demand experienced of late values are displaying a sagging tendency. The weakness is so far confined to landed stocks,, shippers' quotations for forward delivery still being maintained on quite a steady basis, but that they will long remain so is a matter for doubt. The adverse rates of exchange are meantime serving to keep the cost of import high, but that is an influence which will not be maintained indefinitely, although it may be years yet before a state of actual normality is reached. Imports continue light, but generally are proving more than ample to meet existing requirements.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Ottawa Lumber Prices are Likely to Hold Firm

Firm prices, coupled with a slow demand and a poor outlook toward the labor end as to woods operations, marked the Ottawa lumber market during the closing period of October. Though prices kept up there was little or nothing in the market to justify the expectation expressed by some of the trade, that lumber would do a "come back" price before the year was out.

From all appearances from the Ottawa end of the market, the price of lumber is likely to hold firm until the early spring months. There are a variety of reasons and factors, best known to the lumbermen of the Ottawa Valley for such a statement. Nobody is going to throw any stock away, and unless they can clearly see where the replacement stock is coming from, (at the present a lot of them don't,) they are adopting the safety attitude of carrying over the stock on hand rather than dispose of it.

A wide variety of stories concerning the production output was talked of in the trade, but as a confidence must be respected, little if anything can be said at the present time. .

With the next month it would not be at all surprising to certain of the manufacturing trade if a unique and unlooked for surprise in regard to the woods labor situation was sprung. .

During September and October, the shortage of labor in the woods camps was generally admitted, and it was acknowledged by leading operators that the situation was the most serious ever experienced in the Ottawa Valley.

Without telling any tales out of school, the making of a first class battle, which if it materializes, will cost both sides heavily financially, is to be staged between the lumber and the pulpwood companies. .

According to one of the opinions given to the correspondent of the "Canada Lumberman," a large part of the present woods' labor shortage can be attributed to the high wages that is being offered by the pulpwood operators.

"If a woodsman can go into a camp and get from one hundred to one hundred and twenty-five dollars per month with board, from a pulp company, he can hardly be expected to work for a lumber firm at wages from sixty-five to eighty-five dollars per month. Pulpwood is now high on the market. Lumber is slow or at the best is only stationary and the outcome of this season's operations is uncertain," was the comment of one of the heads of the leading lumber operators in the Ottawa Valley.

Though orders were slow, there was, if anything, an increase in the number of inquiries to the trade for the better grades of white pine and the mill run grades. Quotations on spruce remained about the same as they were in the early part of September.

The transporation situation from the railway car end was good. The surplus of cars, if any, was brought about about by the decreased number of orders being placed and shipments going forward.

The export situation to England so far as local companies were concerned did not show much change. Trade in this direction was also slow, and it was rumored in the trade that there was a possibility of existing orders being cancelled.

The fall lumbering operations of the Ottawa sawmills and wood products plants, were a long way from being satisfactory, owing to low water stranding hundreds of logs on shallow shoals, and thus tending to keep down the supply of wood at the mill ponds.

Work and orders with the woodworking factories outside of a few orders for sash and door remained slow. Lath and shingle did not show any change in price and if anything the demand for these building and repair commodities dropped away. Mill and factory labor continued to remain plentiful. Several saw mills in the district closed down with a total cut, considerably below that of 1919.

Halifax Exporters Believe Co-operation is Needed

All through the past summer conditions have not been such as to excite any great degree of satisfaction to those engaged in the export deal trade. Early shipments to the British market met with ready sales at prices which left a fair margin of profit. The freight rate seemed firmly fixed at 300s., there was no great surplus of stock in the British Isles, and everytthing seemed to point to a satisfactory season's business.

Buyers on the other side put great hopes in the Government's building program to create and sustain a steady market for building material, but unfortunately this scheme early fell through, and was followed by other disturbing factors including industrial disturbances and financial troubles which were reflected in a weaker demand for our lumber and a reduced price for ordinary sizes. The demand for the wider sizes was still fairly good, but what at first was thought to be only a temporary lull in the market was later recognized to be of a more serious nature.

It is thought that when the steamship companies reduced their rate to 200s, the market would show some improvement, but the buyers on the other side seemed to think that this reduction was for their special benefit.

Some British merchants report that imports during the season have exceeded consumption to such an extent that the sur-

plus now on hand will be sufficient to meet the ordinary needs of the trade for some months to come, while others claim that the resumption of building operations which is thought to be near, will soon create an acute shortage of lumber.

As the great bulk of the sawn lumber produced in Nova Scotia and New Brunswick, particularly the spruce finds a market in the British Isles, shippers are carefully watching developments there in an effort to gauge the situation for the coming year. At the present time industry in these Provinces, that before the close of the present season, conditions may improve sufficiently to justify the views of the more optimistic.

The time seems to be ripe for some sort of an organization embracing the lumber exporters of Nova Scotia or preferably of Nova Scotia and New Brunswick as a protective measure. There are many matters affecting the trade in general that could be dealt with to the mutual advantage of all concerned by a representative union of shippers, without in any way interfering with the freedom of the individual members.

Co-operation is the order of the day, and the unsual conditions confronting the trade at this time seems to demand that some such action be taken. Sweden, one of our chief competitors has already organized an Exporters' Union, and there is a counter movement on foot now in England to form an Importers' Union, which is probably an outgrowth of the Associated Importers, Limited. In the face of these recent developments affecting the principal market for the lumber from the Maritime Provinces, it seems obvious that the best interests of the trade can only be served by concerted action on the part of those engaged in the export of deals from the lower ports to the British market.

The American market has been decidedly dull for some weeks past. This is the time of year when ordinary building sizes should be in fair demand, but although the quantity of stock in the hands of American buyers is reported light, there has not yet been any improvement noted from across the line. Some say the Presidential Elections have something to do with this state of affairs, while others claim that the action of the railways in adding a 40 per cent. increase to the freight rate has had a depressing affect on the trade.

The local demand at Halifax and other industrial centres in Nova Scotia has eased off considerably following the decline of building activities. Stocks in most of the yards are light, and prices are holding firm, with an upward tendency owing to the increased freight rate. In spite of an exceptionally active year in housebuilding, there is still a serious shortage of houses. A great deal of construction proposed for this year was abandoned owing to the difficulty of securing a sufficient supply of material. A recent report of the Housing Commission states that Halifax needs 1,000 new houses. This work will be carried on next season, so that the outlook for the coming year is quite encouraging.

It is a little early yet to say whether the production for 1921 will be up to the average or not. Many of the operators do not seem disposed to operate on a very large scale in view of present conditions while some state they will have only a fraction of their last year's cut. This decision is, no doubt, due to the greatly increased cost of production, and the narrow margin of profit in sight for the manufacturer at the present prevailing prices. As one operator put it. "While a man might have a little margin left over this year after paying business profits tax and sales tax, the chances are very small for the coming season with the greatly increased cost of railway transporation added."

Labor conditions are reported satisfactory, and if there is a fair amount of work available during the coming winter, wages will probably remain about stationary.

Export Market is Minus Quantity at St. John

The market as an exporting one is about dead at St. John, N.B. No shipping in any direction is taking place. No sales are being made except a few cars here and there, and if sales could be made, much lower prices for random would have to be accepted, and should the brokers accept these lower prices, they would be at a serious loss, as all the lumber at St. John was contracted for this spring and last winter at the very highest prices. Furthermore, should present American prices be accepted, it would be at a rate below present producing costs.

Not a contract has been made as yet for any winter sawn lumber. This, certainly, shows the condition of the market and the feeling of timidity among the buyers who have bought heavily and have their funds tied up. With the banks refusing to go on with any more advances, certainly it is a serious state of affairs, but if production is limited this coming year, it will be the very best thing that could happen to prevent a serious panic in the industry. No stumpage can be bought today at last year's prices, every holder asking $1.00 to $2.00 per M more for his or her stumpage, and as it is certainly coming to the end of our forest production, no one can blame them, for they shall finally get their price in the near future.

Stocks at St. John of deals and scantlings may be quite heavy by the end of November, but from that forward, they will begin to reduce, and if no cutting is done this winter, certainly prices will be steadied. The future holds no dark horizon for the lumber trade irrespective of what the bankers and laymen may think. Forests tell the tale no book or word can pen. Local factory conditions are still good, retail prices in spruce and pine still are maintained, and the only reductions are in B. C. products, which were abnormal compared with spruce and pine, and are slightly reduced.

Stocks of low-grade or refuse lumber are well reduced, and well sold up, and about the only shipments are in low-grade lumber.

No crews as yet are being sent to the woods. Wages are easier and men, who do not at once seek a winter's work, will be left without employment.

It is said that there will be a reduction of, at least, 800 million of sawn lumber in Maine and New Brunswick and Nova Scotia for 1921. This estimate is conservative, and unless buyers and the public in general get busy and buy for future needs, their costs will be felt to a large extent in the coming year.

Shipping Situation in Quebec is Slowing Down

There has been a slight reaction in the shipment of timber and deals from the port of Quebec to the United Kingdom within the last two weeks, notwithstanding, that the demand is still very much in abeyance. Three vessels have taken part cargo, the steamer Manchester Civilian, for Manchester; the steamer Venosia for London; and the Manchester Corporation for Manchester. There are still five sailings of the Canadian Pacific Ocean Service Lines, from Quebec to Liverpool, which will take on small parcels of sawn lumber for Liverpool, that will close the shipments for the season of 1920 in the St. Lawrence.

The scarcity of the demand for lumber both in the United Kingdom and the United States markets, together with the labor demand for higher wages, has so discouraged the manufacturing interests of the district of Quebec that several mill owners threatened to shut down their plants during the coming winter. This seemingly had the effect of bringing the jobbers to their senses, and it is now thought that the mills will continue to manufacture for next year's market.

The pulpwood industry in the meantime, is not worrying. There seems to be no let up in the demand, and the only thing that is bothering the dealers is the insufficiency of cars to transport the wood from Quebec to the mills in the United States. In the meantime, the continual increase in the price of wood is a source of anxiety to the American pulp and paper manufacturers and their clients in the newspaper business. It now costs from thirty-six dollars to thirty-seven dollars a cord for pulpwood shipped from the district of Quebec, before it is laid down at the American mills.

The St. Regis Pulp and Paper Co., of Carthage, near Watertown, N. Y., who are the owners of the Godbout and St. Simeon limits in the lower St. Lawrence, are about to open an office in Quebec, under the management of Mr. Charles G. Levy, son of Mr. John Levy of the well known Quebec firm of W. & J. Sharples, and it is said that the St. Regis Co. will build a mill to ross the pulpwood cut on their limits at Godbout, and bring the same up the river in barges to Quebec.

There are eight hundred and thirty pulp and paper mills in the United States, stretching from Maine to California, which goes to demonstrate the amount of wood that must be cut every year to keep these mills in operation. These include forty-five mills in Maine, one hundred and seventy-nine in the state of New York, thirty-five in New Hampshire, and thirty-eight in the state of Pennsylvania, that are depending in a large degree on the provinces of Quebec and Ontario for their supply of wood, and if the embargo on the export of wood from these provinces is adhered to, it would compel the mills in question to come to Canada and here manufacture their paper and pulp production.

The high cost of labor entailed in the cutting of lumber and pulpwood in the woods at present, is becoming a serious question, and unless the trade takes some means to curtail the prices paid, the demand of labor is likely to go even higher. It was pointed out by your correspondent in his last communication to the 'Canada Lumberman." that competition, caused by the demand for pulpwood, has become so keen, that the trade is obliged to pay abnormal prices for help, and the farmers in the province of Quebec attracted by these prices for their labor in the woods, are abandoning the farms.

Recently a Quebec pulpwood dealer who had forty cords of wood to be peeled lying by the side of the railway tracks of the Quebec & Lake St. John Railway, at St. Catherines, some eighteen miles from Quebec, that had to be peeled by a draw knife before shipment, contracted with several farmers of that place to peel the product for five dollars per cord which gave them about seven dollars and fifty cents per day in wages. When the job was finished, the dealer informed the

men that he had another lot of wood to peel. They refused to do the work unless the price was augmented by fifty per cent.

As already pointed out in the "Canada Lumberman," jobbers are paying farmers eight dollars per cord to cut pulpwood in the district of Quebec, and as two men can cut on an average of three cords per day it will be seen that each farmer is earning a wage of twelve dollars per day. But this is not the worst feature, the farmers are abandoning their land to earn this big money and if a stop is not put to the practice, agriculture is bound to deteriorate in the province.

Your correspondent, in the course of investigation into these matters, and the necessity of bringing foreign labor into the country to relieve a situation that would have the effect in having the farmers remain on their land and at the same time lessen the cost of production, and lighten the burden of manufacturer and consumer, approached the Hon. Mr. J. E. Caron, Minister of Agriculture for Quebec. Mr. Caron is a practical farmer and a man who takes a keen scientific interest in agriculture. He talked the matter over with your representative. Mr. Caron, who thoroughly understands the question of the farmer leaving his land, and his reluctance to till the soil when he is receiving such high wages for the cutting of pulpwood, says the question is a problem to which he is giving his careful consideration.

Mr. Caron remarked that the province of Quebec has and is still spending a large amount of money on scientific agriculture to keep the farmer upon the land. His department was using every effort to make farm life attractive. He was, however, against immigration of foreign labor to take the place of the farmer in the cutting of pulpwood in the woods. Mr. Caron used the argument that Canada was over-industrialized for the size of the population of the country. "These manufacturing interests," said Mr. Caron, "with their modern machinery, eight hour day work and high rate of wages paid for labor, not necessarily skilled in the main, was the cause of attracting the farmer from the land. The farmer has to work on his land from early morn until late in the evening, and when his work is finished he is without social diversion. The mill worker, on the contrary, puts in his eight per hour per day, his work is light and clean, and consequently he is not tired at the finish. In the evening he has his social attractions that make him a candidate for ever afterwards to partake of city life. This it must be admitted is the magnet that is drawing the farmer from the land and, if pulpwood has become a factor it is on account of the great demand of the newspaper publisher. Let the newspaper publisher curtail the size of his paper and the demand for pulpwood will decrease."

In regard to foreign labor in the woods, Mr. Caron said the farmer is best adapted for the cutting of pulpwood. He knows how to wield the axe and pick out the tree as well as to drive. Italian labor would not do for this work; he is a good railroad builder, but "in my opinion," said the minister, "would be lost in making pulpwood. The Belgian and French men are not emigrating from their respective countries to come to Canada. British immigrants are valueless for the reason that they will not assimilate with the French-Canadians. We have this experience in this province. I know of one hundred farms owned by English men in the province who desire to sell their properties in order that they may be enabled to go West. The English will not be ruled, and once the French-Canadian settles in their vicinity and becomes a majority, the English want to sell out and get away West."

With all due respect to Mr. Caron and his opinions in regard to immigration to the province of Quebec, his ideas on this head are scouted by men spoken to in the trade who say the argument of the minister is a camouflage to hide the real depth of the meaning that the French-Canadians do not desire either British or Italian labor to settle in the province, which they look forward to being absolutely a French-Canadian independent entity of the Dominion of Canada.

Good Demand for Cordwood and Ties

Cordwood at the present time is very scarce and practically impossible to obtain. One wholesale dealer in Toronto stated recently that he could find a market for several hundred cars if he could place his hand on the product. Beach and maple are required by fuel merchants owing to the shortage of coal and the prevailing price for hardwood is from $10 to $11, f.o.b. cars.

Two or three years ago every owner of a bush was advised to cut cordwood due to the famine in coal. This was done and before all the product was disposed of, the fuel situation improved with the result that nobody has been cutting cordwood to any great extent during the past year or two.

There is also a good demand for ties at the present time on the part of purchasers. Some railroad representatives are holding back thinking that ties, which have advanced from 15c to 30c a piece, will be purchased cheaper next year when labor is more reasonable in its demands and the cost of boarding men and getting out the timber has fallen. One leading railway tie company stated recently that they were taking no chances with the future but were buying all the sleepers that they possibly could and desired more. Although purchasing costs were high, still now is the season when sawn and pole ties are turned out in large quantities, and next April, May and June, when they are required, certain interests which are holding back, may not be able to obtain the same because cheap ties or even ties of any kind will not be available.

"We have every faith that, while the situation may be a little quiet at present, the demand for ties next spring is going to be particularly strong, and those concerns which are holding back, will find they will not be able to get supplies when they want them," declared one firm.

Marked Slump in September Building

September, normally the month for building recession, runs true to form this year, says the "American Contractor," with a definite slump in construction, according to building statistics from 203 cities. These reports give a total valuation of $101,834,729 for 38,383 permits issued, or an average valuation of $501,640 for September. This is considerably below the computed average monthly valuation per city for the first eight months of 1920, which is $696,920.

September showed gains in 71 cities over August and losses in 96, Los Angeles and Detroit making the largest gains. Chicago permits, which dropped in August from July, make another drop of more than $1,500,000 in September, and the Borough of Manhattan also shows a decided reduction.. Comparison of September activity for this year and for 1919 reveals a 40 per cent. recession for 1920. August showed a 32 per cent. recession over August, 1919. When it is considered that the estimated cost of practically any class of building is from one to three times what it was in 1913 and 1914, taking into account the lower purchasing power of the dollar, the September slump of this year is all the more marked. If volume of projected work were the basis of comparison rather than monetary value, the 1920 operations would drop below the average for each month since April when building permits reached the exceptional figure of $113,000,000.

With Lumber Retailers Lies the Control

Low stocks in the yards of the lumber retailers during the next few weeks may again invite a "runaway" market, such as prevailed during the latter part of 1919 and early weeks of 1920. The acute housing shortage demands building. And the demand will be met, sooner or later, say advices from Chicago.

The lumber production situation differs from that of a year ago. Unshipped stocks of most items are plentiful in the mill yards. If they continue to pile up, production will be still further curtailed or mills will close down. In such event, the supply of lumber will be less plentiful later in the season or next season when building activity renews the active demand for lumber for immediate delivery.

With the lumber retailers largely lies the control of the present situation. If their buying is steady and continuous, instead of intermittent and spasmodic; and if they keep their yards reasonably stocked up, they may avoid the repetition of the panicky conditions and erratic fluctuations which have characterized the lumber market during the past year and a half. At the same time they will have encouraged steady production enabling the mills to produce a larger supply at a lower cost per thousand feet.

The lumber producer can give best service with a reasonably steady demand and with a stable market. In the long run, erratic "boom" prices do not pay. The subsequent "famine" more than pays for the "feast."

Low Water Closes Ottawa Industries

Pulp, paper, newsprint and card board mills on the Ottawa and Hull side of the Ottawa River are at a standstill, due to the very low water level, and as a result approximately 800 men employed by the E. B. Eddy Co., Ltd., and J. R. Booth are idle. Mr. George Millen, president of the Eddy Co., said recently that the Ottawa River level is the lowest in his experience in the paper-making industry and unless there are heavy rain falls the conditions on the Chaudiere will become more acute.

At the Eddy plant the following mills have been closed down: Pulp, newsprint and "C" mill. At J. R. Booth's the pulp and board mills are inactive, and the daily production of newsprint has been reduced from 150 tons to approximately 50 tons. At the board mill the output has been reduced by two-thirds. The sulphite mills are operated spasmodically.

Budget of News Interesting to Lumbermen

New Concern Acquires Pembroke Lumber Co.

The first move on behalf of the big British interests, who have recently become very heavily financially interested in Canadian lumber, pulp and paper operations, and in connection with which there is still another gigantic merger under consideration, evidenced itself in the Ottawa Valley late in October, when the McGuire, Patterson, and Palmer Company of Canada, Limited, absorbed and took over all the properties previously belonging to the Pembroke Lumber Company. About 800 square miles of timber land and limits, together with the mill properties located at Pembroke, were taken over by the British interests.

A large splint manufacturing business, so it is stated, is to be started at Pembroke. The Canadian Company, it is also understood, has under contemplation the establishment of a large match factory. Mr. E. A. Dunlop was president of the Pembroke Lumber Co.

Knox Bros. Secure Plant at Quebec

Knox Bros., Limited, wholesale lumbermen of Montreal, have bought the Davie Shipbuilding plant No. 4 at St. Joseph de Levis, Que., for manufacturing purposes.

The Davie Shipbuilding plant No. 4 is located at the west side of the Orleans ferry landing, Quebec, and is distinct from the shipbuilding plant with the old and new dry docks and machine shops. This plant was established at the outbreak of the war to build submarine chasers, and later was utilized to build wooden steamships for the French Government.

Knox Bros. have, according to their announcement, purchased the property with the buildings thereon, and 85 x 500 feet, and when the installation of machinery is completed, will be able to resaw and dress twenty-five car loads of lumber per day. They are installing Yates fast feed machines, each machine to be driven by a separate motor.

The firm announce that the new place is now shown in the Railway Tariffs as a stop-off point for re-manufacturing in transit, and that the yard capacity will be about 15,000,000 feet, and the dry shed capacity about 1,000,000 feet.

The firm will commence operations immediately and will have a stock at their St. Joseph de Levis place very shortly of 5,000,000 feet of dry merchantable spruce and 4,000,000 feet of British Columbia fir timber.

New Veneer Mill Will Start Operations

The demand for rotary cut veneers in Canada is about to be solved—at least in part—by the establishment of an important new industry at Waterville, Que., where the old factory of Geo. Gale & Sons, Limited, has been taken over by the Waterville Veneer & Panel Company, Limited, by whom it is now being rebuilt and equipped with the most up-to-date machinery and appliances known to the trade.

The daily cutting capacity of the new mill will be a carload of veneer, and that of the plywood plant 20,000 feet.

The company owns large stumpage rights and is assured of a plentiful supply of veneer logs for at least twenty years. Operations are scheduled to commence early next year, and the company will shortly be in a position to take care of orders for forward delivery.

The new industry will be directed by Mr. H. Lefeber, formerly of Montreal, but now in residence at Waterville. Mr. Lefeber, who is widely known to the trade, is the vice-president and general manager of the Waterville Veneer and Panel Company, Limited.

New Company Given Wide Powers

Adams Cellboard Co., Limited, have been granted a charter with a capital stock of $400,000, and head office in Toronto, to develop water and electric power and to manufacture, sell and deal in wallpaper, lithography, engraving, bookbinding, envelope, paper bag and box-making, and generally to carry on business as manufacturers and dealers in paper made from any material, and to convert the same into paper, pulp, strawboard and other preparations. The company is also empowered to sell, buy and deal in wood and lumber of all kinds, and to make wooden boxes, barrels, cases, etc. Various other powers are conferred upon the organization such as the production of groundwood and chemical pulp. The new company will take over as a going concern the business and assets now conducted in Toronto under the style of the Adams Cellboard Co., Toronto.

Continental Lumber Co. is Rebuilding

Adjustment of the insurance losses, on the plant of the Continental Lumber Company at Charlo, N. B., destroyed by fire on September 24th, discloses the fact that the fire was the most costly from an insurance standpoint in New Brunswick in recent years. The total insurance carried was about $426,000 and in the adjustment which has just been completed the insurance loss was placed at approximately $365,000, or nearly eighty-six per cent. of the amount carried.

The approximate individual losses are as follows:

Continental Lumber Company on the plant and contents, other buildings and contents and lumber on the premises, $230,000, or about 94 per cent.

Goodday and Company, Ltd., Quebec, on lumber, $49,000, or about 75 per cent.

Montreal Lumber Company, Ltd., Montreal, on lumber $17,350, or about 76 per cent.

Brownlee and Company, Ltd., Glasgow, Scotland, on lumber, $68,500, or about 51 per cent.

The mill which was recently wiped out was one of the most up-to-date in the province, having been constructed in 1914 to replace one which was destroyed after having been struck by lightning. The owners have decided to rebuild immediately and already the foundations are being laid for a new mill.

Mr. Grainger Resigns as Chief Forester

M. A. Grainger, who for several years past has been in the service of the Provincial Lands Department of British Columbia, has resigned. Since 1915 he has been chief forester for the province, and has filled the position with energy and acceptance, introducing many progressive moves and working in harmony with the Minister of Lands.

Mr. Grainger was born in England and spent his boyhood in South Australia. Returning to England, he attended Cambridge University and in 1897 came to British Columbia. He had heard much of the gold to be secured in the Yukon, and the stories of fabulous wealth in that northern region fascinated him. He came out of that country broke and beat it, he says, to a logging camp where he lost his heart to the lumber industry. Since then he has been closely identified with wood products and has done his best to improve the efficiency of the forest service of the Pacific Coast and the progress of the timber industry. During the past summer he was the representative of British Columbia at the Imperial Forestry Conference held in Great Britain.

Mr. Grainger, who has many friends in forestry ranks in all parts of Canada, served with distinction during the South African war as a trooper in the Roberts Horse, and won the King's medal and six bars. In 1911 he entered the B. C. service as associate forester in charge of records. Mr. Grainger wields a facile pen and wrote "The Woodmen of the West" some years ago, while he has contributed occasional articles to the press.

Thousand Feet of Lumber in Flagpole

Granville Street and Broadway, Vancouver, were recently given a glimpse of the great flagpole donated to Prince of Wales School by the Canadian Robert Dollar Company. The big stick was taken through Vancouver on ten wheels, drawn by a powerful motor truck.

The stick, a beautifully straight piece of Douglas fir, was cut on the Port Moody limits of the Dollar Company, and towed by their tugboat to the B. C. Marine, where the latter company's crane swung it up to the cartage people. The pole is a carefully selected bit of clear slim fir. It is 18 inches through the butt, 13 inches at the top, and 104 feet long. It contains approximately a thousand feet of lumber.

Lenine, chief murderer of the Soviet, says that "discipline" is the secret of Soviet success. That also was the secret by which the Czar held office. The only difference seems to be that Lenine gives them less to eat, treats them rougher, and kills more of them.

EDGINGS

Ontario

The planing and finishing mill of the Pigeon River Lumber Company, Port Arthur, was destroyed by fire recently. The loss is upward of $100,000. The lumber yards were saved.

Best Boxes, Limited, Ottawa, Ont., were recently incorporated to acquire all interests of "Boxes, Limited," and to manufacture and deal in all kinds of wood products. Capital, $250,000.

The name of "Ditchburn Pleasure Boats, Limited," Port Carling, has been changed to "Ditchburn Boats, Limited," and the capital stock of the company increased from $100,000 to $150,000.

The rossing plant of W. L. and J. C. Hunter, at Pembroke, Ont., was recently destroyed by fire. The plant was used for basking spruce pulpwood logs. The loss is $3,000, partly covered by insurance.

John D. McInnes, Smith's Falls, Ont., has bought 800 acres of standing timber and is about to cut it and erect a sawmill. He also runs a sash, door and blind factory, which is very busy at the present time.

A charter has been granted to the Canadian Timber Co., Limited, Toronto, with a capital of $1,000,000, to carry on the business of lumbermen, timbermen and sawmillers, and to buy, sell and deal in wood, timber limits, etc.

The saw mill at Birdsall's Landing, known as Barnet's Mill, was completely destroyed by fire recently. Several customers are said to have lost heavily, one losing 15,000 shingles. The mill is a total loss and the cause of the fire is unknown.

The Industrial Planning Corporation, Limited, has been granted a charter to carry on the business of general consulting and structural engineers, and to design, instal, equip, alter, etc., building structures, plants and machinery of all kinds. The capital stock is $20,000, and head office is in Toronto.

The Canadian Edison Phonographs have been granted a provincial charter with headquarters in St. Thomas, and a capital stock of $500,000, to manufacture, buy, sell and deal in phonographs and other allied lines. Among the incoorporators are Thomas Alva Edison, Chas. Edison, Stephen B. Mambert, Harry S. Miller and Wm. Maxwell, manufacturers, all of Orange, N. J.

The Canadian Forestry Association, on its railway exhibition car, was recently at Penetanguishene. The car was visited by a large number of people and the variety and representative character of the display made through the foresight of the Canadian Forestry Association, was much enjoyed. The C. Beck Mfg. Co. of Penetang, was instrumental in having the car visit that town.

The new pulp and paper plant which E. W. Backus will erect at Kenora, will have a capacity of 200 tons a day, which will later be increased to 500 tons. It is understood that 1,000 men will be employed as soon as construction is well under way. The company will also erect a sawmill, employing 400 men, and build a railway 150 ft. long, the whole ultimately representing an investment of $30,000,000.

The Curtiss seaplane, driven by a 350 horse-power Liberty engine, which was placed at North Bay by the Canada Air Board, recently, as a standby for Lieut.-Col. Leckie's coast-to-coast trip, has since been used by the Department of Conservation in making surveys and taking photographs of the forests within a radius of 40 or 50 miles from North Bay. Major Edgecombe of the Forestry Department, with Capt. McKeown, pilot, has been engaged for some days on this work.

Kratz & Hall Lumber Co. was incorporated some time ago to carry on a lumber business and is at the present time located at Craighurst, Ont. The principal stockholders are J. H. Kratz of Vineland, and J. H. Hall of Waterloo. The former has been in the portable sawmill business for a number of years, and the latter in the wholesale lumber line for a considerable period. The present holdings of the company consist of 300 acres of mixed timber, principally hardwood. They have a large portable mill, located in the woods, which they expect to operate continually. They have already started sawing dimension stock and have orders on hand to keep the mill running for some time.

Eastern Canada

Wm. Robichaud, Sheila, N.B., is building a new sawmill at Sheila in Gloucester County.

R. A. Jodrey and C. H. Wright of Wolfville, N. S., are erecting a pulp plant at White Rock Mills, King's County, N. S.

The Montreal Lumber Co., Limited, Montreal, has been authorized by supplementary letters to increase their capital stock from $100,000 to the sum of $250,000.

The Frontier Lumber Company, Limited, has been authorized by supplementary letters patent to increase their capital stock from $50,000 to the sum of $100,000.

Dryden Paper Co., Limited, Montreal, Que., were recently granted a federal charter to manufacture and generally deal in lumber, timber and pulp products. Capital, $500,000.

In Quebec there are about 90 million acres of merchantable saw-timber, containing about 160 billion feet board measure of saw-lumber. A little more than one-half the cut is spruce.

The Continental Lumber Co., of which Hon. Wm. Currie is manager, will rebuild their mill at River Charlo, N.B., which was recently destroyed by fire. The new mill will be erected by day labor and will cost $25,000.

F. C. Kenney, of Glassville, N.B., who, since his return from overseas, has been employed as a timber cruiser in the New Brunswick forest service.

was drowned recently. His canoe upset while he was hunting, and as he could not swim he was unable to save himself.

Ira Sessenwein, Limited, Montreal, were recently granted a federal charter to carry on a general lumber business, manufacturing and dealing in all kinds of forest products. Capital, $30,000. P. Bercovitch, K. C., and Ernest Lafontaine, both of Montreal, are two of the incorporators.

M. J. J. O'Sullivan, for about six years in the Engineering Department of the Laurentide Company, at Grand Mere, P.Q., resigned recently and has moved to Montreal. Mr. O'Sullivan left the Laurentide Company to accept a position as chief engineer with the Three Rivers Pulp & Paper Co., which will build a 100-ton plant at Three Rivers.

The Gaspereaux River Light, Power & Heat Co. of Wolfville, N.S., was recently incorporated. The company intend to erect a pulp mill to produce 2500 tons a year. At present the Wolfville Electric Light Commission is being supplied with power and light by the Gaspereaux Company, of which C. H. Wright is president and R. A. Jodrey secretary-treasurer.

R. C. Benson Co. Ltd., of Bear River, N.S., who were incorporated in June of this year, are erecting a new mill at Bear River, N. S., for shipbuilding and repairs. The company, at some future date, propose to manufacture lumber, shingles, sheathing, and laths, and to instal machinery for a grist mill. They own timber limits of 500 acres, situated within 4 miles of the mill.

The Redden Woodworking Co. of Kentville, N. S., who were incorporated early in the year with a capital stock of $120,000, have purchased the mill formerly owned by the Nova Scotia Carriage Co., Limited, Kentville, and are now manufacturing lumber, builders' finish, furniture and cabinet work. The company's lumber mills are located at Forrest Home, N.S., and the office and factory on Cornwallis St., Kentville. The president and managing-director of the company is A. P. Redden, C. R. Redden is vice-president, and P. M. Caldwell, secretary-treasurer.

Western Canada

The Imperial Lumber Company, Edmonton, Alta., were recently granted a charter of incorporation with a capital of $500,000.

James McDonald, one of the best-known citizens of Cranbrook, B.C., died recently. Prior to his death he was employed by the Crow's Nest Pass Railway Co. He leaves a wife and daughter.

A fully-equipped first aid dressing station has been installed by the Shawnigan Lake Lumber Company at its Shawnigan Lake Mill. A trained first aid expert has been placed in charge.

The Beaver Creek Lumber Company, which operates a mill north of Alberni, Vancouver Island, recently completed the manufacture of 1,000 fish boxes for the Wallace Fisheries Ltd. The company's operations are very active just now.

Probably with a view of converting the timber to hard cash, the municipal council of Edmonds, B.C., decided to compile a list of all timber-lands on the property of the corporation and to engage an expert timber cruiser to make a valuation.

Hillcrest Lumber Company, Ltd., near Duncan, Vancouver Island, is shipping an average of thirty cars of lumber a month, mainly to the east and to the prairies. A new high lead logging rig has been put in the woods and a conveyor in the mill.

The Kootenay Pulp and Paper Co., capital $500,000, has been granted papers of incorporation. The directorate consists of Nelson business and professional men, and the company proposes to erect a pulp and paper mill on Grohman Creek, near Nelson.

An addition to the industrial life of Stave Falls, B.C., was added recently when the new shingle mill of the Ruskin Operations Company commenced operating. This is the first of two mills which this company intends to operate, the other to be located at Ruskin.

The Vancouver Cedar Mills, which are located at Roche Point, Burrard Inlet, B. C., recently resumed operations after being shut down for some time. The mills manufacture hemlock and cedar, and "Big Chief" shingles and are a subsidiary of the Vancouver Lumber Co.

The Kootenay Pulp & Paper Co., with a capital stock of $500,000, has been granted a charter of incorporation. Several business and professional men of Nelson constitute the directorate, and the company propose to erect a pulp and paper mills on Grohman Creek, near Nelson.

The civic authorities of Port Alberni recently discussed with the Gilroy McKay Lumber Company what they considered the danger of the company's operations. They feared that sparks from the Company's mills might start serious fires. The matter was adjusted satisfactorily, the company agreeing fo take certain precautions.

The motorship Coolcha, Captain Stoehr, was in Vancouver loading lumber for the west coast of South America. The ship is being handled by Balfour, Guthrie Company for the Cholberg interests, who own her. A total of 450,000 feet of lumber was taken on to complete, a portion of the cargo having been shipped at Port Blakeley.

An order for 1,200 bushmen for The Pas Lumber Company was received by the employment division of the Bureau of Labor and Industries, Regina, recently. Another order was received from the Adams River Lumber Company, of British Columbia. These are the first considerable orders for lumberjacks to be received by the bureau this season. The employment division anticipates no difficulty in filling these and other orders for bushmen as soon as threshing in the province is completed. It sent over 5,000 men into the bush last year.

Even rural municipalities are being stirred up by the ratepayers—who are also voters—over the question of cinders and smoke from saw and shingle mills. Surrey council, whose district is south of the Fraser River opposite New Westminster, had under discussion recently the question of a shingle mill in the little village of Cloverdale. Letters from housewives asserted that even screens did not keep out the cinders and dust from the new Smith & Hutton shingle mill. The members of the council agreed that it was likely residents might be inconvenienced by such an industry erected in the village, but they took no action.

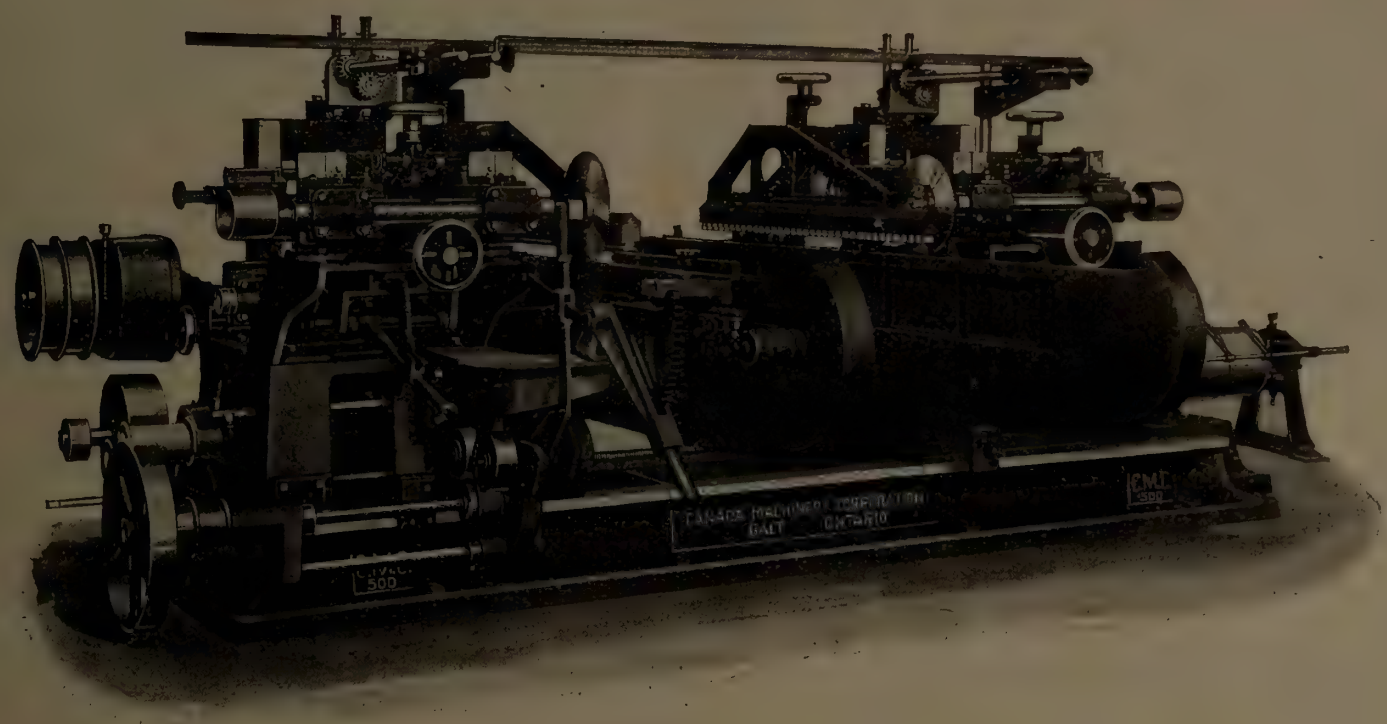
Double End Tenoner

MADE IN CANADA. UNEQUALLED ABROAD



EXTRAVAGANT CLAIMS.

We do not believe in making extravagant claims for our machines; all we have to say for our No. 500 DOUBLE END TENONER is that it is the ***best*** Double End Tenoner on the market, and that we are anxious to show all parties interested that our statement is correct.

Our machine is strong and rigid in its construction insuring accuracy. All controls are grouped in such a manner as to be conveniently and instantly effective, and its ample belt power gives great production. All drives are independent of one another.

FIRE BRICK AND CLAY

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel," "St. Marys," "Keystone" and "M.D. Elk"

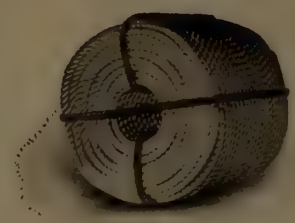
Your Transmission Problems Solved

Consider these facts:
"Lion Brand" Cordage is produced from the best selected, highest grade hemp —in a plant where the strictest conditions prevail —by workmen who "know how". It has grown in favor with the lumbermen for ninety-five years—



a striking example of its worth. So that when we say that "Lion Brand" is the Cordage for you, we do so because past performance warrants it.
If you will write us telling your requirements we will immediately send you full particulars.

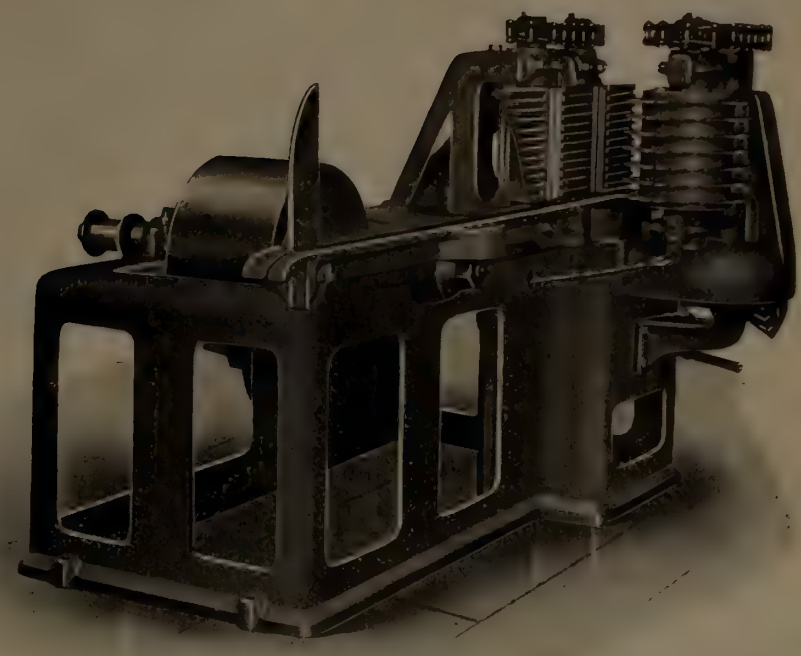
"HAMILTON" CIRCULAR RE-SAWS

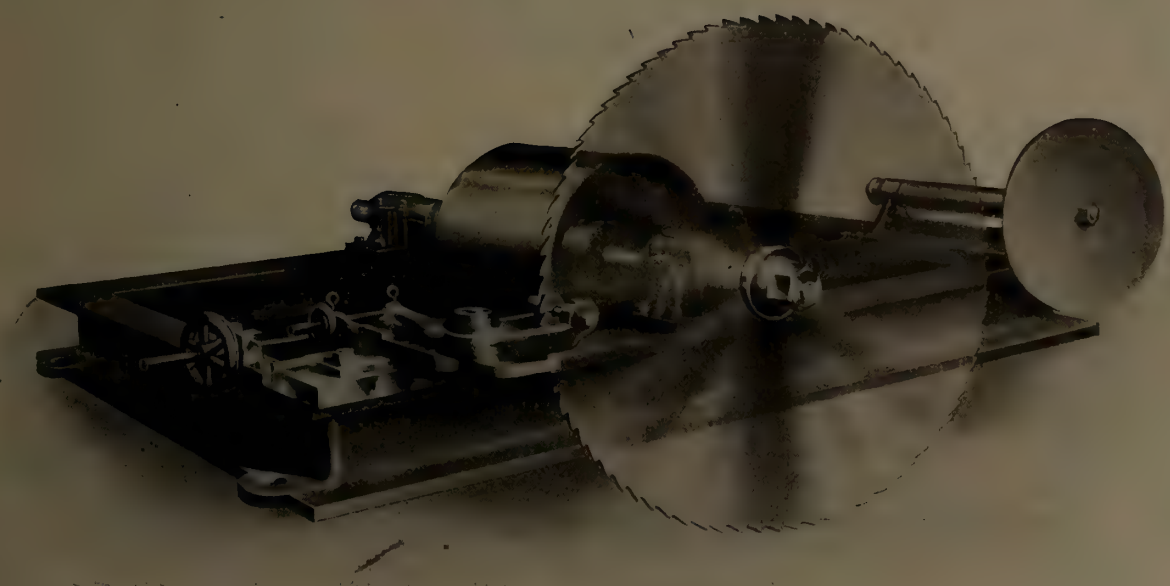


Here is a strong, rigid, well designed machine, specially gotten up for resawing slabs. The feed rolls are carried on a sliding frame that is easily adjustable to cut lumber any desired thickness. The binding or press roll is 13 in. diam., fitted with saw discs and power driven. The saw used is 42 in. diam., driving pulley 18 in. diam. x 12 in. face. Cut shows Left Hand Machine.

We also make this machine with wooden frame, having the mandrel and saw carried on an adjustable sliding frame.

Descriptive circular sent upon request.

"HAMILTON" HUSK FRAMES



Made in different sizes to suit all requirements. Frames are all of cast-iron, of heavy section throughout, planed on top and bottom, with mandrel boxes lined with high grade babbitt. Mandrels are exceptionally large, of forged steel with forged collar, and the guide is the famous Parkhurst steel saw guide with steel splitter.

We manufacture a complete line of up-to-date Sawmill Machinery for either Band or Circular Mills.

The Marsh Logging Machines Do The Work

This is not a theory—it is a positive fact

This photo shows one of our little Gasoline Skidders and Loaders in actual use in Ontario timber. It will be seen that this machine is all we claim for it, **light, compact, easy to move about,** yet **powerful enough for the work.**

Perhaps you have had the idea that the "High Lead" system of skidding is useful only in the tall timbers of the Pacific Coast, where it is possible to get a spar tree as high as 200 feet or more. But this photo shows the "High-Lead" system in actual use with a spar tree of only 25 or 30 feet in height. From this spar tree the hooks are carried out by one man to the log, which may be 200 or 300 feet distant, or even farther away. The hooks are then made fast in the end of the log or logs, if two or more small ones are to be brought in. The Gasoline Skidder then hauls the log in to the spar tree, the forward end of the log being kept off the ground by the pull of the cable. The man usually walks alongside to assist in clearing obstructions. At the spar tree the hooks are changed to the centre of the log, which is then lifted clear of the ground and loaded on the skidway.

This machine does the work of several men, and at much less cost.

Marsh Engineering Works, Limited Established 1846 **Belleville, Ont.**

When You Overhaul Your Mill

THERE are wet places in every saw and pulp mill where nothing but the highest class belting can "make good." It is for these wet places that we recommend what most mill-men swear by—our

"ACME WATERPROOF" BELT

This belt is especially made for a rough and trying service. It has less stretch than any other belt by 15 to 25 per cent.
When you are overhauling try a Goodhue "Acme Waterproof" belt. Other Goodhue belts are "Extra" and "Standard."

Prices and Particulars on Request.

Engineers in Every Industrial Country Endorse Goodyear Belting

INDUSTRY of other countries approves the economical and satisfactory power transmission which Goodyear Belting is rendering daily throughout Canada.

In the factories and mines of South Africa, the workshops of India and the Orient, the mines of Australia; in industries throughout the world, Goodyear Belting is daily solving power problems. Every obstacle overcome teaches us something more about the efficient specification of the proper belt for each drive Men all over the world who have problems similar to yours will now contribute their experience to the fund of knowledge possessed by the Goodyear belting man who calls on you.

To meet the conditions of this world-wide trade, it has been necessary to change some of the brand names of Goodyear Belts.

For instance, Goodyear Extra Power is now Goodyear Klingtite Belt.

But the change is in name only. Goodyear Klingtite Belt is the old Extra Power in every particular.

Any Goodyear branch will send a man who has studied power transmission problem solved by the use of Goodyear Belting the world over—who will br ng this knowledge to bear in solving yours.

No obligation. Phone, wire or write the nearest branch

ATKINS STERLING QUALITY SAWS

Smithing, Hammering and Blocking Saws

No mill saw could do the work expected of it until it goes through the *Smithing, Hammering and Blocking* processes. Smithing removes the lumps in the plate as seen under a straight edge, Hammering equalizes the strain in the plate, and Blocking provides the tension for the speed the saw is to run. These operations are performed in the Atkins factories under the supervision of experts—men long in the service—men who know; that's why *Atkins Saws* have built a reputation for quality.

Ask for our 264 page book on Saws and Tools

The Algoma Range

A Steel Range for Camp use. Built especially for this purpose. It possesses features that are attractive in usefulness but not in beauty. A blunt, hardy Range with a wonderful record for Service.

The Algoma is built in three sizes—each one has the three necessities,—

(1) An Oven of ample capacity;
(2) A cooking surface, open and capacious;
(3) A Firebox, big yet economical.

The Body and Oven are made of Steel that will last. Each piece of steel is solidly rivetted to the other. Great care is exercised to ensure the complete rigidity of the entire construction.

The cooking surface is cast-iron, solid and thick; therefore the heat barely affects it. There are a variety of sections.

The Firebox is lined with weighty pieces of cast-iron. Strenuous usage may wear these linings away—when this happens, replacement is easy and the Firebox is made as good as new.

The Gates are the duplex pattern—two bars, each heavy and perfectly made. Simply operated with one shaker bar.

The Camp Comfort

A heater that radiates direct heat from the body when burning wod. Simple, effective and efficient. The body is filled with wood and paper the light applied and the heater is operating.

The Lumberman's comfort in cold days and nights. Heat radiates in all directions from the round steel body. In the coolest weather the atmosphere around the Heater is comfortably warm.

The "Camp Comfort" is built of well tested materials that can withstand rough usage. The two ends are heavy cast-iron and the door is so large that huge chunks of wood can be fed to the Heater with ease.

The body sits on four cast-iron legs which fit into rigid cleats. Side or top shelves are supplied and are very convenient for temporary use in keeping foodstuffs and liquids at a high temperature.

The "Camp Comfort" is a Camp Heater. It is simply made. It produces the required results—See it.

McCLARY'S ability to make "Good Stoves and Cooking Utensils" is recognized by all users. Seventy-three years solid experience in the manufacture of Stoves gives us the machinery and skilled man power to produce highly specialized articles. These two Stoves are good samples of our best Foundry productions.

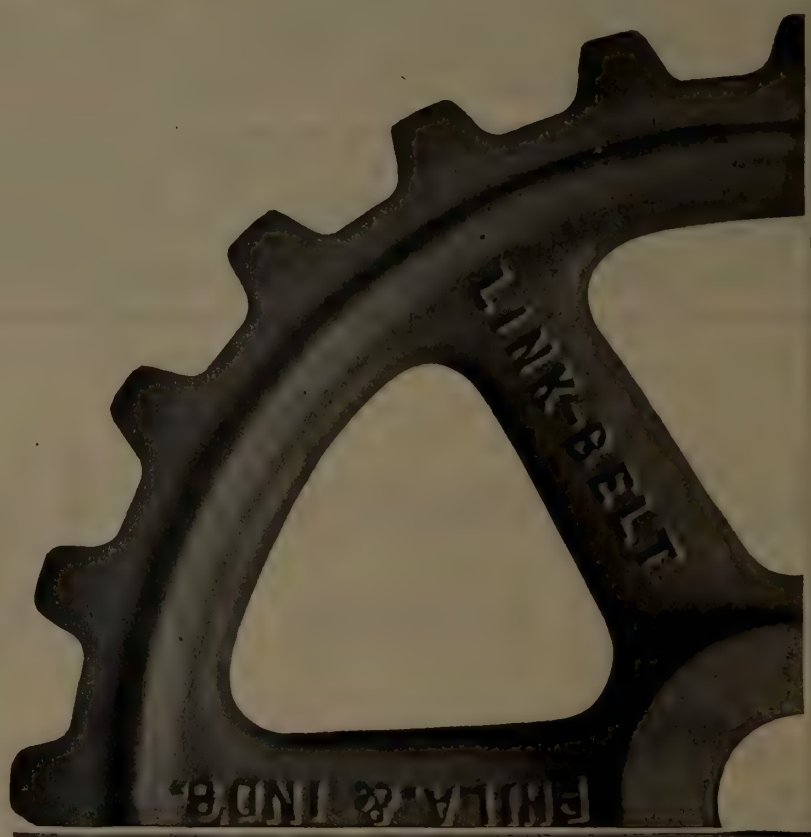
≻FLINT-RIM≺ SPROCKET WHEELS FOR DURABILITY

The life of the chain is prolonged because the wheels do not rapidly wear away from the proper pitch diameter.



≻FLINT-RIM≺ wheels have by years of service under the most trying conditions, fully demonstrated that they are the best wheels ever offered for durability and satisfactory operation.

The reason for this great success is that the ≻FLINT-RIM≺ wheels have smooth, hard bearing surfaces for contact with the links, and are carefully fitted for the chains, thus giving an ideal condition to start with, and maintaining it so persistently that both the wheels and chain are practically insured against undue wear.

The material increase in the efficient life of the installation, eliminates the expense of frequent renewals, and greatly reduces the ultimate cost.

A Harness That Will Stand the Grind

A harness that will stand the strenuous grind of the bush and lumber camps must be of the most sturdy nature. For such work there is no harness made that excels the famous "Carson Quality" Michigan Lumber and Skidding Harness.

It is made of the best quality oak tanned leather—by the best Canadian workmen.

You will make no mistake in equipping your outfit with "Carson Quality" harness and horse equipment.. Let us send you full particulars.

DISSTON

HIGH-GRADE CROSS-CUT SAWS

You will soon find evidence of the superior quality of the Disston-Made steel used in Disston Cross Cut Saws.

You can file the teeth to a keen, fine cutting edge and they will hold the edge given them.

That is because of the flawless material and the exclusive Disston processes used in hardening and tempering the saw.

You will notice that Disston Cross Cut users when speaking of the easy and fast cutting they have done, will usually also mention the way Disston Saws take and hold a good cutting edge.

Sturtevant
PUTS AIR TO WORK

Where are the Shavings?

You can see no shavings or dust in this photo. This floor was not specially "swept up" for the occasion, but shows the actual condition of a plant where the Sturtevant System is installed.

Examine these illustrations carefully.

They are typical interiors of large planing mills; with one exception.

There is **something lacking.**

Where are the shavings?

You will note an entire absence of shavings, litter, and sawdust, because these have all been spirited away by the

Sturtevant
(TRADE MARK)
Planing Mill Exhausters

There is no possible chance for an accumulation of litter of any kind around machines that are equipped with the Sturtevant Exhausters.

Shavings and dust are seized the instant they form, and are borne away with lightning speed to an outside disposal point.

—"ask of the Winds"

It is the powerful current of air of the Sturtevant Planing Mill System that removes the greatest fire risk from the plant.

Interior of a Canadian Planing Mill

No dust can accumulate to blind, or fill the lungs of the workmen—hence greater production.

The installation of the

Sturtevant
(REG. U. S. PAT. OFF.)

Planing Mill System

removes the ever-present menace of dust explosion and fire.

The Sturtevant System is now in use in a large number of Planing Mills in Canada, giving the utmost satisfaction to the mill-owners.

Write for our bulletin No. 261.C. which contains complete details.

Mr. Engineer,

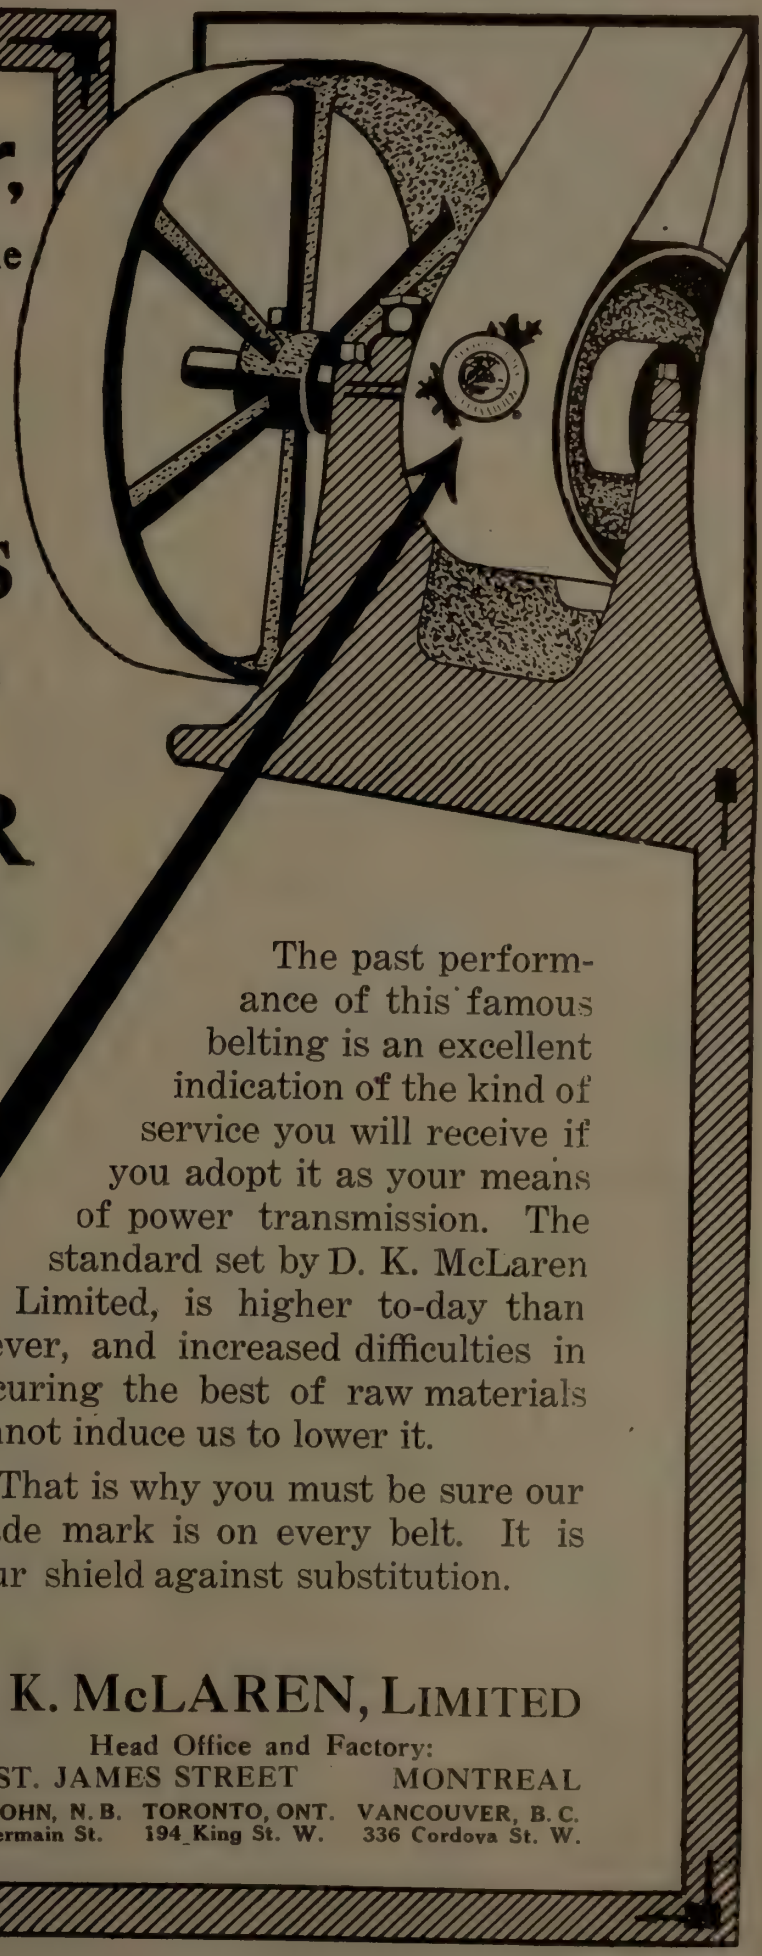
Are YOU Particular about the BELTING You Buy?

If so, look into the PAST RECORD of

D. K. McLAREN'S

Genuine British Oak-Tanned

LEATHER BELTING



— the belting that spells uninterrupted service and low transmission costs.

The past performance of this famous belting is an excellent indication of the kind of service you will receive if you adopt it as your means of power transmission. The standard set by D. K. McLaren Limited, is higher to-day than ever, and increased difficulties in securing the best of raw materials cannot induce us to lower it.

That is why you must be sure our trade mark is on every belt. It is your shield against substitution.

Get The Best

Getting the best is real economy when it comes to towing equipment.

Getting the "Corbet" for instance means a reduction in the size of your crew—means no lost tows—means more work done—and—remember this—it saves its cost in three seasons.

Let us tell you how.

The Ideal Edger for Light Mills

Specifications

Our new Double Edger is built on entirely new lines, and possesses many features that commend it to mill men. The saving in material alone will soon pay for the machine. The output of a mill with this machine can be increased by one-third. It is best adapted for medium-sized or portable mills that cut from 5,000 to 25,000 feet of lumber per day.

SAWS—This Edger is fitted with either two or three saws as required. The saws are 16 in. in diameter, and 10 in. gauge. The greatest distance between saws is:—Two saw machines, 24 in.; three saw machine, 20 in., the least distance between saws, 2 in.

DRIVE PULLEY—The Drive Pulley is 9 in. x 9 in., affording a good belt grip, and is supported by an outside bearing.

SAW ARBOR—The Saw Arbor is made of 2½ in. steel, and has very wide bearings.

Rubber Goods FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P.M.S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

Waterous Boilers

Are Best for Sawmill Use

To get the full steam value out of the fuel you burn install Waterous Return Tubular Boilers. It will pay you for these reasons:—

They are economical of fuel. They carry plenty of steam in reserve for use in emergencies. They can be used with hard and dirty water. They are easily cleaned and readily taken care of.

Furthermore, We Design and supply the fittings for various styles of boiler settings that are suited to best handle the fuels used in the sawmill, giving great efficiency and perfect combustion.

We build and carry in stocks Return Tubular Boilers up to 72" x 18 ft. If we cannot supply you at once from our yards we can turn out your order in reasonable time. Ask us for prices on the next boiler you buy.

BOILERS IN STOCK

1—54 x 14—Horizontal
1—54 x 14— "
2—60 x 14— "
4—60 x 16— "

Mill Owners

Whether you contemplate building new or repairing the old mill, it would pay you to investigate the merits of our Friction Feed Works which overcomes the trouble experienced with the ordinary friction.

While it possesses the speed and power of the steam feed, it can be operated by anyone without danger of accident.

We are now building this machine in two sizes and can supply you with a size that will meet your requirements.

When writing for particulars, state capacity of mill and weight of carriage.

THE MACLEAN MACHINE WORKS, Campbell's Bay, Que.

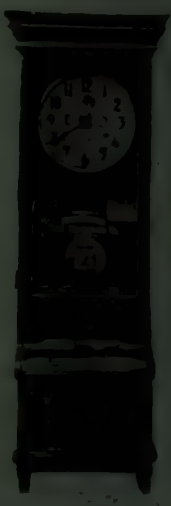
Not altogether what we say, but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

West & Peachey - Simcoe, Ont.

How One Mill Owner Solved the Lost Time Problem



Thomas Bradley, of the Bradley Lumber Co., Ltd., was not getting the maximum amount of work from the sixty odd men in his employ. Furthermore, there had been serious disputes over the time question which had threatened to disrupt his entire plant.

That men were arriving on their jobs five and ten minutes late he had positive proof. That it was confined to the minority he also knew, but the fact remained—these "drones" were causing much discontent—that something had to be done, and quickly.

That was a year ago. Today Thomas Bradley has one of the smoothest working mills in the industry. Co-operation, efficiency, greater output work hand in hand. And if you were to ask him the reason, he would take you into the front entrance to his mill and point to a small cabinet with a clock on the front of it. It would be an INTERNATIONAL TIME RECORDER.

EDDY'S—The One Piece Fire Pail

A Pail without a hoop, seam or joint. Made all in one piece—light as wood and durable as steel. Impervious alike to water and acid.

A Pail that is always ready when the call comes, always in its rack or on its hook—its rounded bottom prevents it being placed in forgotten corners.

Ask your dealer to show you an Eddy Fire Pail.

The E. B. EDDY COMPANY, Limited, Hull, Canada

Monarch NEVERSLIP Tractors

To Pull 'Round Turns In Pathless Woods

Ability to take sharp turns in winding roads makes the Monarch Tractor particularly suited to the requirements of lumbering. The Monarch turns in its own length.

It lays its own track as it goes—broad manganese steel chain traction belts—that gives it firm footing on any surface.

In deep sand, over bogs, on snow and ice, its weight is distributed as though borne on a platform.

And these broad treads, grip the ground over an immense surface.

The Monarch is economical to operate, for its fuel is coal oil, but gasoline may be used if desired.

A winch used to replace the regular power belt pulley enables the Monarch to be equipped as a travelling power crane, which in loading, snaking and other similar work effects numerous savings in operating costs.

Have you ever tried Fesserton?

When you're not getting just the right grade of lumber your business demands; when you're not receiving quite the sort of service you feel entitled to; or when you would like to give your customers a little better value, but can't; its a good plan to try Fesserton.

We're not able to work wonders, but if there's something really good stirring in the lumber world you may be sure Fesserton knows about it, and may be able to give you the benefit of it, too.

How to Reduce Costs of Building

Buy our "Utility" grades of Siding (made in Sitka Pine or Fir), and Flooring (Fir only). They effect a 20% saving. They satisfy the contractor because no extra labor cost is necessary and consumers appreciate the receipt of **maximum value for their dollar.** If you have not used "Utility" grades, write us —no others produce them.

Electricity in Your Mill

Is your electric lighting equipment giving you every possible satisfaction? Perhaps you have had trouble with that motor running your trim saw or the grinder? We have known of cases where a steam mill was wasting power by producing electricity by out-of-date methods.

If you have any electrical difficulties that you would like expert advice on—write our editor a line. He will be glad to help you. Perhaps he can help you twice a month through our columns. It is only $2.00 a year of 24 issues.

Why Not Let Us Look After Your Pork and Beef Supplies ?

You will be well satisfied with the service and quality we can give you on your camp requirements. We have always made a specialty of serving the Lumber trade, consequently are confident we can serve you well:

Try some of these "Quality" Lines.

Fresh or Frozen Beef.	Pickles in bulk or glass.
Mess Pork.	Catsup in bulk or glass.
Barrelled Beef.	Mince Meat.
Barrelled Pork.	White Beans.
Long Clear.	"Peerless" Shortening.

Let us quote you on your Winter Requirements of Fresh and Frozen Beef

Write us or wire at our expense.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Vol. 40 — Toronto, November 15th, 1920 — No. 22

Guilty—or Not Guilty?

Amid the charges and counter-charges, thrust and parry characterizing the Ontario Crown Lands investigation, now in progress for many months, order is, at last, emerging from chaos. In plain terms, the commissioners are getting down to definite results and giving explicit evidence that they intend to carry the job through to its logical and legitimate conclusion. A few heads may fall by the wayside, some who have taken false oaths may suffer, and still others, who have not been honest in their remittances, may be compelled to settle in full of account. If these and other equally tangible effects follow, no fair-minded man should have any fault to find with the work and worth of the commission, which is now apparently "getting somewhere."

Of the scope and comprehensiveness of the commission's undertaking, public appreciation will be largely based and directed by conclusions. Results are beginning to manifest themselves in the fact that one lumberman has already handed in a cheque for $13,000, representing the value of the difference between the overrun shown on his books and what the Government accountants had decided was a legitimate overrun for a mill of its size. Civil action, on an interim report of the commission, has been entered against another firm.

With respect to cullers, appointed by the Government, their false returns, loose methods, political pull and duality of service—working for both the Crown Lands Department and some of the lumber firms—it is time that the probe reached those who have been wilfully dishonest and negligent. If criminal proceedings are instituted, the upholders of a sound, businesslike administration of any department will give the Ontario Government credit for bringing about a much-needed reform. In the Lands and Forests branch there is no room for perjury or fraud, either on the part of the casual culler or the influential lumberman.

One or two cases of a contagious disease do not necessarily imply that the whole community is infected but, as communicable outbreaks will bear watching and should be isolated for the physical welfare of the community, so, too, if there are any lumbermen who have been deliberately deceptive and have taken from public domain that which rightly belongs to the people of the province, there should be no turning aside on the part of the judicial commission or the authorities until the work is completed.

There is no doubt that the evidence so far presented has brought to light the need of a change in methods which too long have prevailed in the Crown Lands Department. A more rigid, energetic and capable service is required for the handling of the timber wealth and revenues of the province.

One sees little justification for the permit system, which has flourished at different times. It would seem that a concrete result has already been brought about by the investigation, and that is, the Government is advertising several small lots of timber limits for sale by public tender, which in former days would have been disposed of by permits. Public offering appears to be the only fair and equitable basis of handling the timber resources of Ontario and keeping them entirely separate from politics and political friendships or associations.

There never was a judicial inquiry involving the administration of political bodies in any department but what a hue and cry was raised relating to alleged injustice, favoritism, prejudice, suppression, partiality, closure, autocracy and all the other epithets hurled so indiscriminately in parliamentary debate and party conflict. The motto at the present time, so far as the timber investigation is concerned, should be "hewing to the line and letting the chips fall where they will."

One unfortunate feature is that the daily press is playing up the evidence in a most sensational way and leaving the inference that all lumbermen are either millionaires, enemies of the public domain, profiteers or plunderers. This is so manifestly unjust and partisan that no refutation is necessary. The "Canada Lumberman" believes the vast majority of the operators in the province are upright, straightforward men, and if there have been shortcomings in the matter of returns, no small portion is due to the unbusinesslike system which has prevailed in the department for the last quarter of a century and grown stereotyped and shopworn.

This is the day of new methods, changed procedure and greater service. It is up to the department to keep step with the fresh order of things and, in inaugurating any policy that has for its object, reform, economy and efficiency in the fullest measure, the heartiest support will be extended.

No one, who is guilty, should be spared. Those, who possess a clean record and have pursued a clear course, need have no fear. Those, who are convicted of fraud, perjury or forgery, should pay the full penalty. No honest lumberman can do business in a fair, square, above-board manner and compete with one who is fraudulent or crooked and shown a reckless disregard and selfish contempt, not only of the public interests, but of timber waste and other abuses.

There are periods, of course, when lumber manufacturers and timber owners make more money than they require at that immediate time; but there are other times when they have been forced to sell their product at prices that allowed nothing at all on investment or cost of production, and they have taken their losses without cavil. On the average, taking the good years with the bad, they have not made any more money than they could have in any other legitimate line, with the same energy and ability and on far less capital, vexation and worry. Laws made to protect limits, collect revenues and renew timber growth, must take into account the fact that there is a mutual interest on the part of lumberman and all other citizens, for where one interest is detrimentally affected, the other suffers as well.

Niagara District Retailers Believe in Unity

Initial Steps Taken in Organizing Another Branch of O.R.L.D.A.—President Reid Outlines the Benefit of the Get-Together Movement of Dealers

K. J. Shirton, Dunnville, Ont.

Organization is the watchward in industrial and mercantile ranks, business men today recognize the benefits of co-operation and the necessity, in view of the changing conditions through which all branches of activity are passing, of rendering better service and employing the most efficient business methods.

In accordance with this spirit, and the progress of the times, the retail lumber dealers of the Niagara District felt that they should come together and form themselves into a local body or branch, the same as has been done in six or seven other districts of the province of Ontario, all of which form a part of the Ontario Retail Lumber Dealers' Association. Among the most active workers in the movement were K. J. Shirton of Dunnville, O. L. Rice of Welland and Fred Barraclough of Cayuga.

The date selected for the first meeting was November 1st and the invitations were sent to the retail lumbermen in Beamsville, Cayuga, Caledonia, Dunnville, Grimsby, Hagersville, Selkirk, Simcoe, Thorold, Waterdown, Welland, Bridgeburg, Niagara Falls, Jordan Harbour, St. Anns, St. Catharines, St. Williams and other places. Owing to the unfavorable weather the rain falling steadily the greater part of the day and the utterly impassable condition of many roads, which prevented the dealers in the adjoining towns from motoring over to Dunnville, the attendance was not large but was representative.

Among those present outside the district were, John B. Reid, president of the Ontario Retail Lumber Dealers' Association, Toronto, Horace Boultbee, secretary of the O.R.L.D.A., Toronto, J. B. Mackenzie, Georgetown, secretary of the Orangeville District, and G. B. VanBlaricom, editor of the "Canada Lumberman," Toronto. The visitors were accorded a warm welcome by Mr. Shirton and shown about the town, which is a busy progressive community of 3,500 people, located on the Grand River near where it empties into Lake Erie. The meeting was held in the rooms of the Dunnville Club and proved to be both interesting and enlivening.

K. J. Shirton of Dunnville, presided, and in his opening remarks, expressed regret at the unpropitious weather which had prevented a number of those, who intended being present, from motoring over. For some time he has felt the need of a district organization, such as was proposd, and in speaking to a number of fellow-dealers, they had also endorsed the project. Mr. Shirton was confident that everything would go along successfully as soon as matters got well under way. He was glad to welcome the visitors to Dunnville and do anything he could to make their stay pleasant. He then called upon Mr. John B. Reid, of Toronto, president of the Ontario Retail Lumber Dealers' Association to address the meeting.

The Value of District Bodies.

Mr. Reid expressed his pleasure at being present, and stated that they should not be in anyway discouraged by a small attendance at the outset. He recalled the fact that when the first organization meeting of the Ontario Retail Lumber Dealers' Association was held, there were only twenty present, and now the membership was 181 and growing rapidly. He believed that the district organization would come along much better as soon as it began to operate. Continuing, Mr. Reid said: "Ours is now a good, live organization, and I have not the slightest doubt but that the same condition will work out with you here. I must confess that two or three years ago I was not in favor of a provincial organization of retailers. I remember the fate of the first gathering held some years ago. It lasted over the initial banquet, when all the members talked over what they were going to do during the coming year, and from that day to this I have never heard from one of them. I was so discouraged that I vowed I would never have anything to do with another such a body, but finally I was persuaded to take an interest in the work and to try it again. I am very glad that I did so, for everything has gone ahead splendidly and unitedly in not only the organization in Toronto but throughout the province. The movement has spread and resulted in great benefit to the retailers in the community in which they live, not only from a dollars and cents point of view but in prestige and standing which the dealer enjoys today.

"How was a retail lumberman looked upon in the past?" asked Mr. Reid. "Any fellow, who erected a fence and put in a small stock and sold it out again was called a retail lumberman. Today the retail lumbermen are an important and influential body of men, controlling as much capital as a lot of wholesalers who figure in the public eye as somebody. Retailers are now commencing to realize that they, too, are a body of some weight and can dictate a definite policy to those who call themselves wholesalers. There are, in my mind, two important interests in the lumber industry,—the man who manufactures the material and the fellow who distributes it. These are the chief ends of the business. Our object in this Association is to become men of worth and usefulness and to get together those engaged in the same line and sit down and teach them sound business principles and just how the lumber industry should be conducted. There are many men who are operating today on too low a cost; they do not have any conception of what it costs them to do business. It has been demonstrated that the retailer should get on the average of 33 1/3 per cent. profit on the invoice price of his goods or what they cost him on the track in his town. It would not be possible, of course, to get this profit on hemlock and some of the lower ends of lumber but on the higher grades, and manufactured articles there should be a corresponding advance so that on the average from 30 per cent. to 33 per cent. should be the profit in order to cover the expense of doing business and yield a retailer a fair return. Mr. Reid strongly opposed any such shortsighted and suicidal procedure as is now and then followed by a few dealers of selling lumber at $1.00 or $1.50 advance per M. and imagining that money was being made. He advised dealers not to be in the class of men who never took a holiday. No man ever absented himself from his business for a few days but what on his return he was the better for the outing. In the O.R.L.D.A. organization the members had been benefiting themselves, not only financially but morally, physically and in every way.

Some of the Matters Taken Up.

Turning his attention to the Toronto Retail Lumberman's Association, Mr. Reid devoted some time to an exposition of the aims and objects of that body and how getting together had improved the status of retailers, not only individually but collectively. Men, who hod done nothing but scrap for years, were now on a friendly, frank basis and he rejoiced to see the spirit of goodwill which prevailed. One of the greatest regrets of each member was that such an institution was not started twenty or twenty-five years ago. Mr. Reid said that the comradeship and co-operation held sway among men and it was evidenced in their business relations, giving a square deal for a square dollar. Some men have sought to heap up riches and pile up money. They had spent all their days in the selfish pursuit of trying to make an extra dollar and that was about all they got out of life. They seemed to forget that there were no pockets in a shroud and the only tribute paid to them, when they passed away, was "Well, old . . . . is gone. He made a lot of money but he was never any use and did no good to himself or anybody else."

"You who belong to the O.R.L.D.A. will never discover better associates; in fact, you will never find in any place better men than those engaged in the same line of business as you are. In the Toronto Association there are no grouchers or kickers; one fellow is not trying to deceive or to get ahead of the other all the while, but is endeavoring to help him along," added the speaker.

At the regular meetings in Toronto business conditions were discussed, stocks on hand, collections whether it was advisable to buy at the present time or defer purchasing, etc. Thus the consensus of opinion of twenty or thirty men was obtained, which was a fairly accurate guide to go by. At present the retail lumber merchants in Toronto were buying very little.

Trade Relations and Order Forms.

The Chairman of the Ontario Retail Lumber Dealers' Association referred to the good work done by the Trade Relations Committee settling amicably several differences between producers and distri-

butors, and gave several instances of how litigation had been avoided and a friendly understanding between firms preserved.

Mr. Reid thought that at the next annual meeting of the Association it would be well to appoint permanent members to the trade Relations and Arbitration Committee with fees attached for the performance of certain services, so that when disputes or claims came up for adjudication, as they frequently did, the members of the committee should not be called upon to adjust every issue, big and little without some compensation for their time and services.

The next matter referred to was a universal order form, which the Association was preparing to have adopted. It's use would result in eliminating disputes and cancellations. In the matter of violating contracts there were offenders on both sides, both in the retail and wholesale ranks. A clause would be inserted stating that until the order was confirmed by the manufacturing or wholesale firm, the retailer had the same length of time to cancel. In the past too many orders had been taken by travellers and others, subject to confirmation by the firm, and on the latter being offered a dollar or two per M. more by someone else, the order had been cancelled. In the meantime the retailer had been tied up, and the same privilege should be extended to the buyer as to the seller. If the latter got a dollar more, he would say the stock was already disposed of, and the retailer suffered. The retail lumberman should now have the right of buying for a dollar, less, until such times as the order was O.K'd. from head office. It was a poor rule that would not work both ways.

There were shyster wholesalers as well as shyster retailers and also a lot of brokers and peddlers going around seeking to find out what one man wanted and the other man had, and make a profit out of both. If a uniform contract form was in vogue, it would result in obviating many misunderstandings, broken promises and delayed confirmations of order.

"If you want to do a fair and straight business, remember, there is no flexibility in honesty." He believed that many a retailer, who did not need stock, was often persuaded to place an order by some clever smooth salesman who was paid a big salary and was magnetic, enthusiastic and too anxious to load up a dealer. Mr. Reid believed that such a man was in the end doing his house a lot of harm and possibly piling up bad debts for the future. Under the present system a retail lumber merchant, who signed an order, could not cancel, no matter how much pressure had been brought upon him to buy and to get away from that kind of thing, the uniform order form was drafted and he believed the retailers should write their own orders.

The new order blank would work out to equal advantage to both buyers and sellers and give the dealers, as already stated, the same length of time to cancel as the seller took to have the sale confirmed. It would also exclude a large number of those who were not accredited representatives of any house but were chasing up and down finding what one fellow wants and other fellow has.

In closing, Mr. Reid said the larger an Association got, the more powerful it became. There had been some talk about uniform grading rules as a lot of stuff had frequently been worked off on the retailer which should never have been there. The one safeguard against being imposed upon was to know the mill you get the stock from and the way it is put up. The chief trouble arose from mills and wholesalers trying to put over on the purchaser something he did not buy. If the material received was not up to the standard in grade, measurement, etc., the dealer has the right, according to the conditions set forth in the new order form, to dispose of that which is up to the mark and fully meets requirements, and lay aside at the owner's risk, that portion which is disputed or not up to specifications. The Trade Relations Committee could be called in to adjust matters, in the event of an understanding not being reached by the parties themselves. Mr. Reid said there were other important points which he would like to cover but they could be taken up at a later date.

How To Keep Up The Interest.

J. B. Mackenzie of Georgetown, who is secretary of the Orangeville district, was asked by the Chairman to outline the plans by which the interest in the work of his district had been developed to such an extent. Mr. Mackenzie stated that the first thing he would lay emphasis upon, would be the social side. "In organizing a district you get acquainted," he added, "with those in the same line of business in your own neighborhood and you develop a feeling of mutual acquaintance and interest which really sticks." The second thought he would impress was that the district association was not created with any thought or idea of regulating or controlling prices of lumber in any way, whatever. Such a policy would be selfish and narrow minded and an organization based upon this foundation would soon totter and fall. Co-operation was the principal object for as Emerson had once said: "The value of any man is his ability to co-operate with and use the ideas of the other fellow."

Mr. Mackenzie believed in putting a personal question to each man at the district gathering and getting his views; then such a man feels that he is one of the organization. "Our next meeting, of the district which I represent" continued Mr. Mackenzie "will be held in Orangeville on Wednesday, December 1st. In sending out notices to the members I intend to put one or two direct questions, and also to call up "the boys" by phone a day or two before the date. One query will be "what do you think the attitude of the public will be next spring regarding the buying of lumber? As dealers we have got to do some thinking with respect to the way the puublic is going to view matters this coming spring, exercise judgment on what we buy during the next three or four months and govern our purchases accordingly.

Another question will be, how each dealer keeps track of his orders and handles his accounts. We desire all the latest pointers in business methods that we can secure. If we are going to make our individual business a success we do not want to build it too much around ourselves. If we do not get out once in a while and rub shoulders with and meet the other fellow, we reap but little benefit and are apt to become narrow and selfish in our methods. We must co-operate one with the other. Our interests are mutual and if the market price for lumber goes down we will have to be more careful and discriminating in buying and the way we do business, and give the public better service. New conditions are coming to the front in our line all the while and we must be prepared to meet them. There are the new sales tax, the increase in freight rates and other problems, which are worthy of our best attention."

Another Gathering at Niagara Falls.

After some further remarks by Mr. Boultbee, secretary of the O.R.L.D.A., O. L. Rice of Welland, Fred Barraclough of Cayuga and others, it was decided that the election of officers should be postponed until an evening meeting could be called in Niagara Falls, Ont., when a banquet will be held and the work of definite organization proceeded with.

A committee of Messrs. Shirton, Rice and Barraclough will interview James Harriman of Niagara Falls, an enthusiastic member of the O.R.L.D.A. and make arrangements at an early date for the carrying-out of such a function as proposed. It was felt by all present that Niagara Falls would be a central point for the next district gathering and everything that will tend to make the event an outstanding success will be vigorously under taken.

Would Start Demonstration Wood Lots

There is every likelihood that several townships will take advantage of the Provincial Government's plan to co-operate in the very valuable work of reforestation. Hon. Manning Doherty has issued a letter to that effect, the letter being addressed to the townships through agricultural representatives. In it the minister says: It is the desire of the Government that the reforestation of waste lands be encouraged as generally and as rapidly as possible. In every township there are acres of land which are used for absolutely no purpose. but which would, with attention, produce a crop of timber in a comparatively few years and fully repay the effort and expenditure devoted to the matter. The department is co-operating with the forestry branch of the department of lands and forests in this matter.

To bring this subject prominently to the attention of the people the Government would like to see a demonstration plot established in each township and to this end desires the co-operation of the township councils. If the township council will purchase an area suitable for this purpose on a well travelled road and have it properly fenced, the Government will undertake to supply and plant trees to reforest such area and look after it in the early years of growth. Such an area of land should not be less than five acres or more than ten acres.

It is my desire that you should bring this proposition to the attention of the township councils in your county. I would suggest that you write a letter to the reeve of each township outlining the proposition and that you endeavor to see the reeve of each township personally and discuss the matter with him or as far as possible attend the meeting of the township council at which the proposition is discussed. Please assure the council that your services are at their disposal in the selection of land for the purpose as it will, of course, be expected that you will give the matter your supervision in any townships in which such demonstration wood lots are established.

It should be possible to have a large number of these demonstration wood lots started next spring and applications should be received before December 31st. It should be clearly understood that all such demonstration plots will be vested in the township and any profit which may ultimately accrue will go to the township. The expense involved in the part of any township council is small and I feel that the result in awakening a greater interest in this most important problem would inaugurate a movement which would be of great value to the permanent development of this province.

Do you Know What your Lumber Really Costs?

Learing How to Make Fair Intelligent Price and Sticking to it is Vital to the Success and Expansion of Retail Lumber Business in These Days

What are Your Costs, Mr. Dealer?

Figures recently recieved by the New York State Association Cost Accounting Bureau show that the cost of doing a lumber business varies from $11.80 per M to $16.85 per M feet of lumber handled. Members of the Bureau are in position to secure valuable comparative data as to the handling costs on material. Do you know what your costs are?

The waiters were busily engaged in clearing the table and the hum of conversation was mingled with the clatter of dishes and silver. The occasion was the quarterly meeting of the District Lumber Association which had opened up with a feed and talk feast. The conversation had ranged all the way from the scant dressing of lumber to the best kind of motor trucks for delivery. Just now the topic of interest was that old familiar subject, "What does it cost to do business?" says the "Lumber Co-operator."

"Now we calculate that we have our figures about right," reflected Dwight Jones, as he carefully balanced a taper of long white ash on the end of his cigar. "I am well acquainted with the manager of Raymond & Company, who tells me that their cost of doing business is 22 per cent. In my opinion Raymond & Company have it about right and I notice that this seems to be the general idea of dealers that I have talked with at the convention. We take off our annual statement at the end of the year and it has always tallied pretty close with this figure so that we feel we are safe in allowing 22 per cent for the cost of doing business."

"You're right," drawled Sam Joseph as he pushed a chair back from the table and began to rock back and forth. "I can't see what the use is of spending all this time talking about the cost of doing business when we know what it is every year. If we need any extra pointers we can get them out of the trade journals and there is no sense in keeping a fancy set of books and going to a lot of extra work to get figures that won't do anyone any good."

Guessing Leads to Ruination.

"That's where you're wrong," broke in Stanley Perkins, "you cannot really know what it costs you to put material through your yard unless you keep the proper records. This idea that you can figure costs and make prices by guess and by golly, has been the ruination of the lumber and building material business. Everyone of you know that you handle a lot of business that you don't make a cent on. You do it because Jim Ford, your customer, tells you that he can buy Shiplap and those Roofers for fifty cents or a dollar less from your competitor. Time and again you have figured that if your competitor can sell this stuff for a little less, that you can too. Those of you who are here have got away with it, but I wonder if you have forgotten already about Wright & Company and Henry Jervis. They went to the wall and I am ready to bet dollars to doughnuts that it was because they didn't know how to make a fair intelligence price and stick to it. They didn't know what they were doing and they allowed their price to be set by their competitor who also didn't know, but who made them think he did. I am here to tell you that the only safe and sure path for the lumber dealer today is to really know what it costs him to do business. And he is not going to know this unless he has the proper system for ascertaining it."

"When you can show me by the actual experience of men who have tried this thing out, then I am ready to listen to your argument about cost methods," said Sam Joseph. "I think we have had entirely too much theory and not enough honest to goodness facts. You have to show me by producing some brass tacks."

Just then the door opened and in stepped Walker Smith, a tall well built, clean shaven man, with black hair and brown eyes which twinkled as he answered the greeting of those about the table. "Say Walker, here is one for you," exclaimed Stanley Perkins before he could sit down. "We are having an argument here and we want you to give us a little cold turkey talk."

"What about?" queried Smith as he fumbled for the pen knife on the end of his watch chain.

"We want to know what you have to say about the cost of doing business and whether it is worth while to install the Association Cost Accounting System. These fellows here want to be fair I know. You are the man to give us just the information. "Well Gentlemen, I will tell you what we are looking for, for I understand that over in your county the dealers have been talking costs and that you have had the system working in your plant for the last year."

Smith pulled out his watch and slowly put it back in his vest pocket. "Just why I had the system installed and what benefit we get from it."

Was Disgusted With The Returns.

"My brother and I have been in the lumber business for the past ten years, as several of you know. We did our business on the same lines as many other dealers, in a sort of hap-hazard way. We closed our books at the end of each year to find out what we had made or lost in the course of the last twelve months and we had some lean years too as I believe you will recall. Finally, two years ago, I took over my brother's interest, as he was disgusted with the returns from his investments and decided to go into the automobile business. I had heard of a method of finding the cost of operating expense so that you would have the information each month as you went along, instead of at the year. I determined to find out if any such method could be applied to my business. My bookkeeper was keeping my accounts all right. Books were always in balance. Yet they didn't give me the information I wanted. I called in a firm of expert accountants. They did me some good, but even their methods didn't satisfy me. One day it dawned upon me that what I needed was an expert accountant who knew my business and so I called on the Retail Lumber Dealers' Association. They found a man for me who came out and in two weeks he had my business systematized, and the office force handled the work the same as if working on the old plan. There was no radical change for this expert used practically all of the forms that I had before. He talked this over with me as he went along so that I understood perfectly myself.

It was mainly a matter of distribution of Purchases, Expenses, and Revenues by which I now get every month the items involved in running my business.

I know what it costs me to unload and pile in the shed, and to warehouse a M feet of lumber.

I know what it costs to sell that M feet and what it costs to deliver it.

I have those figures on my desk at the time I need it, which is when the material is sold.

Then I add a fair profit and when I can't get costs out of my material, I let the other fellow have the business. This cost information applies in detail to my coal business, and also to my mason supplies and farm produce.

I get the correct cost on my planing mill, on paints, on roofing, and on the hardware department.

I had to hire one extra clerk to handle the detail but the knowledge which I have had of my business has enabled me to get a profit on each and every item. I haven't been running some of the departments of the business at a loss as I did before. The personal satisfaction of having this cost information available every month is worth to me ten times the cost of maintaining the system, let alone the saving of real money by not taking on business at a loss."

Convince Customers of Fair Dealing.

"There are times when customers complain of high prices. Everyone of you I venture has had that experience. I have more than once taken a customer who has imagined himself the victim of misplaced confidence into my office and figured out the cost from my books and convinced him that I have dealt fairly with him. In all cases these customers paid their accounts and continue to buy from our firm. Why? Because I have been able to show them the facts as I know them, not simply tell them that such and such is the case and that they must pay it. I want to say that the installation of my system of cost accounting was the best investment that I have made since I took over the entire business."

"Furthermore, I believe that I have helped others because I knew my costs. I have not cut prices at times when I could have taken nice orders, for I know that if I did I would lose money. That is my story and you fellows who are letting the trade play you against your neighs just take this tip from me. Get the Association to send a man to your plant and have him put in a cost system now—right now. Then keep it as it should be kept—up to the minute and you won't have to worry about gray hairs cropping out over night."

Will the Wages of Lumberjacks Take Drop?

Operators in Many Parts of Canada Looking For Decreased Cost of Operation —Cut in East Will be Greatly Reduced—Men are Still Inefficient

There was presented in the last issue of the "Canada Lumberman" reports from different lumber companies in various parts of eastern Canada, regarding the labor situation, the cost of supplies and the extent of woods operations which will be carried on during the coming season as compared with similar work a year ago.

These reports were most interesting and instructive. Since the last issue, additional replies have come to hand which will shed further light on the much-discussed topic of next season's output.

The Cleveland-Sarnia Saw Mills of Sarnia, say: "This is the first year we have operated any camps. Up to this year we had exhausted our timber supply and during this summer we purchased a large tract of timber on the Spanish River and are preparing to operate this coming winter. We hope to get in two camps or possibly three. We find that wages are running from $70,00 to $85.00 per month, which we understand is $10.00 to $15.00 per month higher than they were a year ago. We also find that labor is very scarce, and supplies high with the exception of oats and potatoes which are reasonable in price compared to what they have been. As to our stock of lumber at Sarnia, we will go into the winter with the smallest stock that we have ever had. We will only have about 60 per cent. of what we had a year ago. We expect to have a full year cut of logs for our mill fo rthe season 1921.."

Will Operate Four Camps.

Robinson, Wright & Co., of Shulee, N.S.: "We are operating four camps and may increase the number later. We find labor fairly plentiful but wages in this district are averaging about $5.00 per month more than last. This increase, of course, is caused by the high cost of living. Operating expenses in general will be more than those of 1919-1920. Owing to our early sales, our lumber is well cleaned up. A considerable area was burned in Cumberland county last summer which accounts for greater activity in that particular section."

Men Are Coming In More Freely.

The Schroeder Mills & Timber Company, Pakesley Station, Ont.—"We have our usual number of camps, viz., seven open since September 1st, but we are still short a couple of hundred men although they are coming in more freely now. Wages are higher than last year but provisions are slightly lower. Hay is higher and oats lower —so that taking it on the whole, we expect the cost will be higher than last year. The weather has been exceptionally fine for bush work, a little on the hot side but not much rain to bother. Our mill is still running and we expect that it will continue to run until the freeze-up. The deer slayers are very much in evidence these days, but don't help the logging much. Something should be done to prevent them hunting or shooting with high-powered rifles in the vicinity of the logging operations, as they are a menace to human life. Some take a crack at a horse now and then.

"We will probably carry over a couple of million feet of logs this winter. We hear that some of the operators on the north shore are retrenching. One firm has let its men all out. We are working away as usual and have bought two carloads of horses already, and as men come along, we will get more. We have 75 teams in now. We are thinking of trying a caterpillar tractor to draw logs with this winter on one of our long roads."

Lessened Output in the East.

Chas. T. White & Son, Sussex, N. B.—We expect to produce about one-third the lumber we got out last year, and we think the general idea in this locality is about one-half.

Stanley Douglass, Ltd., Fredericton, N.B.—We think there will be not more than one-half as many logs cut in this section during the coming winter as was the case last season. This is owing to the high cost of labor and supplies, shortage of cars and the uncertainty of the market. Speaking for ourselves, we are not getting out any logs for our Stanley mill and only a small cut for the mill at Devon. We have no camps of our own but have contracted for about three million feet. The larger part of our summer's cut is still in the yards, and although cars are becoming more plentiful orders at decent prices are hard to get. It seems to us the only safe policy is to curtail production and wait for better market and decline in operating costs.

Looks For Good White Pine Demand.

An Eastern Ontario firm say.—Our operations in the woods are about 75 per cent. of what they were last season and we find labor still very difficult to get for the woods and efficiency has not increased. This, with the fact that wages this year have jumped 20 per cent., will make logs cut much higher than last season even allowing for slight drop in provisions and horse feed. As regards mill stocks, we are going into the winter with less than 50 per cent. of what we had this time last year and owing to the short supply of white pine, we expect a good demand for it should develop with the turn of the year.

Costs Will Be Higher This Year.

The Bishop Lumber Co., Nesterville, Ont.—We are operating this year only five camps, while last year we operated eight. The labor supply until recently we have found, has been very lacking; also the class of men have been of a poor type for woods work. However, during the last month we are finding that there is a greater number of idle men on the market and that the disposition toward work is more willing than it has been for some time in the past. Owing to the scarcity of labor in the early fall and the increase in wages over last year, it is our belief that lumber operations this year will exceed in cost those of the past year.

Believe That Wages Will Decrease.

The Muskoka Wood Manufacturing Co., Huntsville, Ont.—We expect ourselves to take out a normal stock this winter; but our understanding is that, owing to prevailing conditions there will not be as many camps in during this winter. Up to now, we have not had much change in our wage rate, but are finding labor in the camps more plentiful every day, and expect a noticeable decrease in camp wages during the winter. The drop in the price of oats and some other lines, will help a little in the cost of taking stuff out, but there has not been up to the present any great advance in the efficiency of men at the work in the bush; that would be the greatest aid to lower costs.

Producing Costs Are Excessive.

Austin & Nicholson, Chapleau, Ont.—Our woods operations this year are about normal with this exception, we are operating log camps instead of tie camps, the intention being to saw the ties. We are carrying on, as we are doing, only because we have fixed contracts for railway ties. We are operating on a speculative market such as lumber necessarily is and with labor conditions and supply costs as they are today, we would follow the example of a large number of other people and curtail our output materially. Not because the lumber is not required but because operating conditions have become so difficult and expensive that the production costs are abnormal. The labor market never was so uncertain. There seems to be plenty of men but they are more unsettled than ever, with efficiency constantly being reduced. Our stocks are lower than have been at this season in any year for the past five or six.

Three Men to Do Work of Two.

The St. Maurice Paper Co., Montreal.—We have about the same number of camps in the woods this year, but we have a good many more jobbers than we had last year. This has been a fine fall to cut and skid logs and we expect our jobbers will fill their contracts. The labor market is the highest we have ever experienced and for efficiency, it takes about three men to do what two would do ten years ago. Our operating expenses are high but our lumber stocks are much lower than we have had for some years.

Men Are Becoming More Efficient.

McLachlin Bros., Arnprior, Ont.—We are operating the same number of camps this year as last, that is, twelve in all, and we hope to start two more within the next month. We find that while bush men were scarce a month ago, the supply is increasing, and they are much more efficient than last year. Wages are $10.00 higher than they were in 1919-20. Regarding the stock of lumber on hand, it is considerably smaller than last year and is the smallest stock we have had on hand for many years.

Are Not Operating Any Camps.

The Devon Lumber Co., of Sherbrooke, Que.—We are not operating camps this season. We found it particularly difficult to keep sufficient men in the mill during the last week of sawing. In fact, at one stage of the game we had to close down one side on this account. We are carrying over a slightly larger stock of lumber than we did a year ago.

O'Brien, Limited, South Nelson, N.B.—We are curtailing as much as possible. We have not any of our own camps in and do not

intend to have any. This is the situation all over the river. Some firms are getting out a third, and others not even that much. We are putting in several dressing machines, and they will to a certain extent take the place of our regular lumber business. At present we are operating a four foot "Moreau" barker, using the small logs for this purpose, and taking the larger logs to the sawmill. We find that this works out very well. We are running this equipment night and day, and getting about 50 to 60 cords. We propose shipping this wood by vessel or cars, as we have facilities both ways.

A. J. Murphy, Latchford, Ont.—We are operating quite strong this season. Wages are higher than last year and good men are scarce. Everything has gone up above the prices which prevailed a year ago and operations for the winter of 1920-21 will cost twenty per cent. more than those of 1918-1919. There will be a good cut of pulpwood in this district but not as much lumber as last season.

Keewatin Co. Will Operate More Mills.

The Keewatin Lumber Co., of Kenora, Ont., are operating six camps this winter, and it is their intention to put in four more, making ten in all. More than 600 men will be employed getting out logs for next summer's cut. Word received from Port Arthur announced that it is the intention of the company to operate the old R. P. L. Company's mill in the south ward of the town, according to the arrangement made between Mr. E. W. Backus and the corporation of Kenora. It will, therefore, be necessary to get out a larger quantity of logs this winter than usual in order to supply the additional mill. There will be lots of employment in the woods around Kenora.

Heavy Seed Year For White Spruce

The Commission of Conservation has received reports from a number of points in Ontario, Quebec and New Brunswick indicating that this is an exceptionally heavy seed year for white spruce in eastern Canada. There promises to be a good yield of white pine seed as well. Last year there was practically no spruce seed in eastern Canada. Heavy seed years for spruce and pine usually occur only every fourth year, therefore those who wish to collect the seed should take advantage of the abundant crop this year.

White spruce seed ripens in September, and the cones should be collected just before they open. If picked too early, the seeds will be immature, and if left till the cones open, the seeds will have dropped out.

The increasing attention being given to reforestation has developed a large home market for tree seeds. In addition to the various governmental and commercial nurseries, several of the pulp companies, including the Laurentide, Abitibi, Spanish River and Riordon have nurseries. There are also good markets in the United States and Great Britain for Canadian tree seeds. Heretofore, the nurseries on this continent have had to depend largely on European seed, owing to the limited amount of native seed collected. The European seed has not been entirely satisfactory for our climate and hardy native stock is preferred when obtainable.

Cutting Out Guess Work in Costs

Know your costs of doing business. It is most important and vital to success. More lumber retailers go down and under probably from not knowing their costs and getting an adequate profit on their merchandise than any other. The day of guess work is over and the words "around" or "about" or "in the neighborhood of" should find no place in the policy and management of any retail lumber enterprise today when trade is quiet and competition keen. When figuring the cost of stock the retailer should see that everything is included. Chief among them are the following items of overhead which must be added to the invoice delivered cost of the material itself: Interest on loans and investments; rental of property — where interest is not charged; taxes, water rates, advertising, insurance, travelling, office and stable expenses, labor and salaries of all descriptions, depreciation on buildings, machinery, horses, equipment, etc., and two per cent. for bad accounts.

When a dealer has figured out all of these items and added them to the delivered cost of the material he is in possession of the necessary information upon which to estimate his selling price.

The selling price should be made up of three elements: (1) delivered cost of material; (2) overhead cost; (3) profit. It follows that the most logical manner in which to deal with the question is to estimate how much of the selling cost is to be apportioned to each of its elements. Suppose, for the sake of illustration, that a dealer decides that 10 per cent. of the selling price should be profit. It follows that 90 per cent. of the selling price will represent the delivered cost plus the overhead cost. The delivered cost is a known quantity. The overhead will be the difference, the two elements, of course, being figured as percentages of the selling price. Experience has shown that the overhead cost in Ontario varies considerably in different yards, but that it is not safe to figure below about twenty-four per cent. of the selling price.

Assuming, for an example, that twenty-four per cent. fits the case, it is clear that 24 per cent. plus 10 per cent. of the selling price will represent the overhead and the profit. The delivered cost will then be 66 per cent. of the selling price. In other words, if the delivered cost under such conditions is multiplied by 100 and the result divided by 66, a selling price will be reached which will cover an overhead cost of 24 per cent. and a profit of ten per cent.

There is plenty of chance for going in this matter of estimating the selling price. Many a man simply adds a percentage to the delivered cost and thinks that he must be making money. The following table should be studied. It is based on the supposition that the overhead amounts to 24 per cent. of the annual gross sales.

Herron Company Have Model Camps

R. B. Herron of R. B. Herron & Co., Tionaga, Ont., says they are carrying two operations at present on the line of the Canadian National Railways. One operation is at mileage 125, where thirty-five men are employed and the output is about thirty thousand feet. The other operation is at mileage 122 where about fifteen men are engaged, with a daily production of fifteen thousand feet. R. B. Herron & Co. have at both points a high standard of sanitary camp. The camps have single beds of iron with iron springs in both camps and hot and cold shower baths in each. The wages paid to ordinary laborers is $4.50 to $3.00 per day, without board. Board is furnished

Major R. B. Herron, Tionaga, Ont.

at the rate of $1.25 per day. The men work ten hours a day and appear to be generally satisfied. Notwithstanding this, from April 1st to Sept. 30th the firm had 1,155 men on their pay roll. This indicates the unrest of labor and oftentimes there were as many laborers leaving work as were prepared to go to work.

There is no organization among the workers, but the O. B. U. would occasionally send men in who came for the ostensible purpose of creating trouble. One of these representatives reported to the Ontario Government that the camps were unsanitary. The Government inspector was sent up and examined minutely the sanitary arrangements at both mills and reported to Mr. Herron personally that the conditions were above the standard laid down by the provincial authorities.

In the engagement of labor Herron & Co. do not rely upon commission labor agents to procure help for them. They have their own agents and in all cases pay the railroad fare of the men brought in. In many cases the men did not stay long enough to work out the cost of transportation.

Pioneer Lumber Days in Rice Lake District

Forest Products Built Up Many Communities—Romance of Early Operations when Emoluments from the Timber Trade were Ridiculously Small

By F. H. Dobbin, Peterboro, Ont.

In a large measure we are all vitally interested in the past history of the lumber industry which holds second place in the activities of Canadian manufacture. When we look at what has been and what we can now see, we may infer how far along the road we have travelled and how far we have yet to go. Until the inevitable takes place—extinction of limits and paucity of returns, inability to market from points once so accessible, the gradual dwindling of what once supplied opportunity and manufacturing profit.

We have it on authority that the membership of a church changes in fifteen years, and that of a business community in twenty. True a few survive, but enough only to leaven the day of opportunity. And so in the lumber business. Men have come and gone, used up the facilities leaving others to step in and make the best of what is left. All this forms a reason for placing before the readers of the "Canada Lumberman" some account of the industry as it started, developed and rose to commercial distinction in the Midland District of Ontario, in the years that have gone.

In the early allocation of boundaries to groups of lands in Upper Canada the section, roughly speaking, from west of Kingston to near Toronto was known as the Newscastle District. Afterwards subdivided, the section parallel with the shore of Lake Ontario, but inland, was named the Colborne District, and for many years was so represented in the Upper Canada House of Assembly. Out of this allocation was afterwards carved the land now comprised in the counties of Northumberland and Durham, Peterborough, Victoria, and the counties east and west. The county of Haliburton was a later creation, being taken out of the lands at one time under control of the Canada Company, that great adjunct to early colonization and settlement.

It is principally with the territory of the counties of Peterborough and Victoria we have to deal. It is true that the county of Hastings furnished opportunity for the lumberman, and was exploited by the Gilmours and other organizations. But it is of Peterborough county that we wish to write. The lumbering activities within its borders supply quite enough for comment to any reasonable extent and compas. Here wer located immense tracts of wooded lands awaiting the coming in of the lumberman and his hordes.

Included in the county of Peterborough were the townships of South and North Monaghan and Otonabee, all bordering on Rice Lake or the river Otonabee. There were also other municipalities as far north as Chandos and Ansthruther, quite near to the height-of-land that presently descends to the Ottawa. There was a sweep from Smith township on the West to Belmont and Metheun on the East, together with other well wooded lands within the borders; especially well adapted to operations of getting out timber and stock for lumber because of the numerous lakes and streams that supplied easy and convenient means of transportation for the stock in the rough.

Waiting for Means of Transportation.

While forest lands are still in the foreground one conspicuous and salient feature of the landscape of the year 1838, and for many years afterward, is gone, that of the seemingly inexhaustible stand of pine that towered above the general forest surrounding. It was waiting, at the time indicated, for some means of transportation of the sawn product to market, other than by the tedious and expensive hauling by teams and waggons to the lake front. To meet this demand the one insistent appeal of the district, Peterborough to the south, was for railroad communicaction. In the issue of the Peterborough "Despatch" newspaper, of July 29th, 1847 the editor makes comment as follows:

> "To send out merchandise or products of the soil from 25 to 30 shillings per ton is paid, as freight. For nearly two weeks we have been unable to get even a trunk conveyed to Port Hope or to Cobourg. The journey to Lake Ontario, of thirty miles, now occupies ten hours. Articles such as salt, plaster, etc., are in a great measure shut out from us by the expense of freight. The sawmills of our neighborhood can cut 60,000 ft. per day, but are often in a great measure idle for want of access to market for lumber, owing to the expense of transit."

And, in further illustration of the intensity of the situation, it is stated that in Peterborough, without a railroad in any part of the county, wheat was worth only 37 cents per bushel, and about 50 cents at Port Hope. On March 1848, and with the prospective completion of the Grand Trunk Railway, along the lake shore. "The Front" as it was termed, the "Despatch" states that prices immediately advanced for wheat to 3s 9d, oats from 9d to 19d per bushel, and hay from 27s to 42s per ton. These advances were based only on the prospect of easier access to market. How vitally the deprivation affected the lumber business can be judged.

In 1848 a charter was obtained to construct a railroad from Port Hope to Peterborough and over ten thousand pounds subscribed. The project was eventually dropped, to be followed in 1852-3, by a company, which secured an Act to construct a road from Cobourg to Peterborough, and on Chemong Lake, with the object of securing the freighting of lumber from the mills at Bobcaygeon and at points on the lakes adjoining. In the fall of 1854 the line was opened for traffic, to Peterborough, and at once the impetus to trade was apparent.

The lumber trade increased immensely, and where before the export of sawn products (by means of the river to Harwood, a point on Rice Lake and by teaming to Cobourg, the nearest lake shipping port) had not exceeded between three and four million feet per annum, it, at once increased to about twenty millions, and in future years exceeded by double the output as stated. Use was made of the railroad bridge across the waters of Rice Lake, which was at the best a precarious means of gaining the south shore. However it effected a purpose.

A few years afterwards, when the line to Port Hope was opened, the lumber trade found its own and the extent of the export was at once reflected in the increase of population in and about the town. A census taken in the spring of 1852 showed that the resident population living about the mills and outside the actual limits of the town, that there would be much under 5000.

Real Money Was Made by Dealer.

It is true that the flood of money coming into the district was the financial salvation of the country tributary to the demand, but it came in at too high a price. To the men engaged in operating the cost for the use of money was high and expensive. Large sums were looked up and at excessive rates of interest. And when cut, dried and marketed either to Quebec for the English trade or to Albany for the American jobbing houses, the real money made was not by the man who manufactured the lumber but by the dealer who merchandized it. England had not, to any extent, begun to build ships of iron. The needs of the Western and flat lands States had denuded the forests of New England and Canada was to be exploited for the commercial benefit of all and sundry.

Briefly, the lumber business in the Colbourne District began in the early forties, and reached its highest point about the year 1868. From that time onward the output declined except from parts of the

Rolling the snow makes the ice freeze thicker to carry log dumps. Scene in the woods operations of C. N. Railways at Foleyet, Ont.

county especially favored with limits in a somewhat virgin state. From the first the district was specially favored in that there was abundance of water available for operations. The lakes to the North and streams contributary facilitated operations much more than in other localities. The river Otonabee, also known in sections as the Trent, descends from the height of land to Lake Ontario with a fall of nearly 600 feet. The floating of logs and timber was all in a downhill movement. The succession of seasons favored the business.

Those operating set up camps, more or less permanent in the heart of the limits. Roads were broken and supplies were brought in. Felling the trees, cutting into log lengths, hauling, or "cadging" as it was termed, to the banks of the numerous streams and watercourses and shores of the many lakes went on during the winter. When snows melted in the spring and streams were in excess of water the logs were dumped into the current and floated to the lakes, where, formed into "booms," they were guided through connecting waters to Bobcaygeon, to Lakefield or where the mill was situated. Logs for manufacture below Clear Lake were set loose to float down the Otonabee. The "drive" as the group of men housed on a floating camp was termed followed the rush of logs as hurried forward by the current.

Weeks, indeed often months, of incessant and watery labor were required, the work being carried on principally by crews of men recruited from Lower Canada and known as "pea-soups," from their accredited fondness for that form of diet. These appeared in the early spring and went away when their special duty had been accomplished. An experienced, daring and reckless set of men they were, inured to privation and outdoor life. They were arrayed in strange apparel, rather grotesque, prone to consumption of liquor, fond of fighting and contemptuous of the dweller in the towns and villages. It was from this experienced class of men that Lord Wolseley recruited his crews of voyages to man and handle the boats on that famous expedition up the Nile to the relief of General Gordon.

Square Timber and Sawn Lumber.

The trade divided itself into two main products, those of square timber and sawn lumber.: In the preparation of the square timber the best and finest trees were selected, for square timber had as its destination in the English market. The trees were felled with care to avoid breakages, for a pine of eighty feet high coming down like a gigantic flail had to be guided clear of rocks and boulders or its commercial value would be discounted. Cut to from forty to fifty foot lengths the shaft of the tree was squared and lined out to largest dimension. Few trees under twenty-four inches in diameter were used, lesser diameters working up better into sawn lumber. Having been hewn, pointed at each end and bored they were drawn to the ice and formed into rafts of about thirty feet in width, all tied together with flexible saplings, which were used instead of ropes. With four sweeps or cars, at each end the float was ready to undertake the voyage to the south so soon as the ice released its burden.

Just as the sailor assumes the risk of the sea the raftsmen took the dangers of the river passage. All the power dams were constructed with sluices especially prepared to allow of passage of the rafts with the most powerful part of the water directed to the opening. From Lakefield to Nassau, on the river, was an exciting passage. With a fall in the bed of the river of not less than 180 feet in ten miles to Peterborough, there was some current. The river was diversified with numerous twists and bends and, with the enormous amount of water set free by the spring flood, the trip was one of large excitement and real danger. Many of the men perished, being flooded right off the rafts despite life ropes to hang on to. Cribs made up of hardwoods, such as elm and oak were especially hazardous for being less buoyant than pine they were always more or less submerged in the rolling torrents at the foot of the slides and hard to handle. Such timber was despatched early in the spring to avoid being water-logged. Myriads of hardwood logs lie at the bottom of the sheltered bays along the lakes and river.

Venturesome souls, those of great daring and high of aqueous purpose, would tie themselves to any of the dams, of which there were many, along the river and as the crib started on its plunge down the slide they would jump on and secure passage as a stowaway. Such contributions to the passenger list were always hailed by the crew with threats and curse. The crew had quite enough on its hands without attending to the safety of some dry goods clerk, local baker or barber. The trip was more dangerous than riding an airplane, which avocation presenting large opportunity to rise in the world, is extremely impetuous in the way of coming down again.

After a spell of rest, moored in the Little Lake, the cribs floated for twenty miles down the placid surface of the Otonabee to Rice Lake and another twenty miles by aid of a tow, the length of the lake to Hastings, for further passage down the Trent river to Trenton, on Lake Ontario. Thence in bulk or dismantled, they were sent to Montreal or Quebec for export. Large quantities were forwarded from Lakefield, Hasings, Campbellford and other points along rail route, and also by a short rail line to Cobourg and loaded on lake boats for Montreal. Special sticks were carefully handled to be used as masts. The expense called for on removal and the excessive length all militated against development, as the profit for reasons stated, was limited.

When Lumber Sold at Six Dollars.

Viewed in the light of present day prices the emoluments from the timber and lumber trade seem ridiculously small. Loaded on cars sawn lumber averaged about $6.00 per thousand feet, board measure. It is true that the right to cut on the limits cost only a nominal sum, and rated by labor costs of to-day manufacturing costs were not large. The trade raised the Midland District from the position of having a restricted industry to comparative affluence. Especially was benefit seen in the rural and back-country districts. At once there came into operation an almost unlimited market for the settler's produce. Hay, oats ad horse fodder was bought from him almost at his door. He was also enabled to sell his services and his team to the highest bidder. His winter instead of being one of inactivity brought to him steady employment. For over twenty-five years he had his hands quite full of business.

The township of Monmouth, Cavendish and Galway as well as several farther north and afterwards brought into civic government as a part of the county of Haliburton, were prolific in standing timber suitable for the manufacture of sawn lumber. Logs, that now appear on the waters of the lakes and rivers, were disdained as too small to make use of. Railroad ties, for instance, were in moderate demand only. Shingles, where manufactured were cut from logs culled from the drives as not suitable for boards manufacture. Vast quantities of slabs resulted from the slicing of logs down to the standard width for export lumber. The "Yankes Gangs" were in large measure responsible for wastage. Thirteen and sixteen feet in length and width of ten and twelve inches were accepted as standards and esteemed for hauling, shipping and for ship tonnage. Such lumber piled closely and evenly on the deck of a schooner or a sea carriage vessel would not readily shift.

It is a truism of our economic life, that abundance of any product or material makes for waste. This was evident on one particular of the lumber business in the early years. It may now be noted as an illustration of how far our necessities have driven us to economize.

How Abundance Made for Waste.

During the fall season of 1919 plain sawn lath sold for as high as $24.00 per thousand. In 1855 it sold as low as 2.25 per thousand, and about that date was the beginning of the use of refuse to make laths. Previously the old form of "split lath" was the standard. The builder would select clear boards, sixteen inches or more in width and half an inch in thickness. Placing the board on the turf and using an axe he would split the board at irregular intervals, for a part of the length of the board. Repeating the strokes presently the board was splintered for its length and width, and when nailed on the studding and stretched, exposed the interstices that grasped and held the mortar when applied. Supremely wasteful, but lumber was a drug on the market.

A comparative statement of exports from the district in the year 1855 mentions that 4188 bundles of lath were sent out. It was apparently received with large favor, fo the following year (1856) 24,556 bundles were supplied. Curiously, the demand dropped off, for 1857 shows that only 16,548 bundles were called for.

Reference has been made to the impetus given to the lumber export trade as soon as the railroad was available. Previous to 1855 the output forwarded did not exceed four million feet, in 1855 it was 11,142,479 ft. all forwarded by the Cobourg and Peterborough line. The freight costs for a haulage of 30 miles was $1.35 per thousand feet. A further statement shows that the freight on 881 tons of merchandise was at the rate of $3.54 per ton, while flour was hauled for 23 cents per barrel. Firewood found passage at $1.00 per cord, and was handled twice.

It should be considered that in noting the quantities of lumber exported, that the facilities for manufacture were such as might be termed home-made, with the exception of saws. Mill buildings, flumes, wheels, penstocks, gangs and gates, carriages for logs, saw-tables were all made on the spot by the local millwrights. Marked improvement did not appear for nearly ten years after cutting began to be general along the lakes and river. These facts will be related in another article, referring to mills, places, facilities and daily and weekly output.

Erecting Pulp Plant at Wolfville

The Gaspereau River Light, Heat & Power Co., of which C. H. Wright is president and R. A. Jodrey secretary, are building a small plant at Wolfville, N.S., for making groundwood pulp, and are installing a 30-inch grinder with a capacity of 8 to 10 tons of dry pulp daily. It is expected that the mill will begin operations early next year and will employ about 25 hands.

Retail Lumbermen Fight Mail Order Firms

Appoint Mill Committee to Combat Catalogue Houses and Show Up Their Deficiency in Service, Delay in Deliveries and Alleged Cheap Prices

A. R. Sanders, St. Thomas, Ont.
President S. W. O. R. L. D. A.

Lumber conditions and the market situation, trade outlook and the building prospects for 1921 were animatedly debated at a well-attended meeting of the Southwestern Ontario Retail Lumber Dealers' Association at Chatham, Ont., on Monday, October 8th. The sessions were held in the Chamber of Commerce rooms and were profitable, pleasant and interesting. Many topics were taken up and lively discussions entered into. Action was taken to combat the propaganda of certain mail order houses who are flooding western Ontario with literature, to the effect that they can supply doors, sash, moulding, frames, etc., at bargain prices. It was shown conclusively that in many cases these goods did not come up to representations, that there were delays in delivery, misapprehension as to grades and finish and other shortcomings. A mill committee was appointed by the S. W. R. L. D. A. to prepare a list of prices on similar lines, showing that the retail lumbermen can furnish goods of better quality and workmanship than these catalogue houses, and customers have the benefit of a local service and seeing exactly what they get before purchasing. This committee of Messrs. Bogart, Wallace, Scofield and Russell will get to work at once and will present a report that will be sent to all the members of the Southwestern Association who are determined to leave no stone unturned in protecting their interests against unfair and unscrupulous competition.

The visitors were hospitably entertained by the Chatham lumber dealers to a motor drive and to a chicken dinner at the Hotel Sanita and a hearty vote of thanks was moved by President A. R. Sanders, of St. Thomas, to the Chatham men for their generous consideration, to which W. A. Hadley, of Chatham, briefly responded.

Among those who attended the gathering was J. B. Reid, of Toronto, president of the Ontario Retail Lumber Dealers' Association. Mr. Horace Boultbee, secretary of the association, was also invited to come, but on account of being away on a hunting expedition, was unable to be present. Mr. Reid delivered two stirring addresses, in which he told of what the Ontario Association was doing and pointed out some issues which would be discussed at the next annual meeting in Toronto.

President Sanders stated that the lumber business had reached a crucial stage and he would like to see a general discussion on conditions present and prospective. Personally, he had not run across anyone who could tell, with any degree of accuracy, how things were going to shape up. The prospects were rather uncertain as much depended upon the building situation and the demand which would set in after the new year. Anyone who would load up with stock now was, in his opinion, taking a gambling chance pure and simple if they purchased in quantities beyond their immediate requirements.

Ceases Selling to Farmers' Clubs.

A letter was read from the secretary of the Ontario Retail Lumber Dealers' Association, stating that the John M. Diver Lumber Co. of Chatham, which had been selling to Farmers' Clubs, had decided to discontinue the practice and dispose of forest products through legitimate channels. This announcement was received with much satisfaction, and Secretary Boultbee asked that the representatives of the J. M. Diver Co. be given a friendly reception when calling upon the trade in view of the stand which the firm had just taken.

Mr. Russell of Walkerville, dealt briefly with the effects yellow pine, B. C. fir and B. C. cedar would have on eastern hemlock. He said that yellow pine was being offered all the way from $35.00 to $42.00 per M feet, delivered in his district, with half the business tax paid. The only addition that would have to be made to the prices would be the exchange, as settlement had to be made in New York funds. He thought that it was advisable to buy at these prices, which would only last a short time and were not likely to prevail again. Many southern mills had closed down and a number of the smaller men were trying to unload. Railway equipment was low and the transportation companies had started to buy, having held off until after the presidential election. It was a healthy sign when railway companies began purchasing, as it generally meant good business. The time to look out was when they were not in the market for any requirements.

The discussion was continued along allied lines, and Mr. J. B. Reid, in the course of his remarks, thought it advisable for the retailers to get rid of their high-priced lumber if they could replace it at present values. They would thus be making the difference between what they sold at and what they bought for. Different opinions were expressed regarding the prospects of building for next year, the output of the mills, the cost of production, and it was the general opinion that purchasing any commodity today at a less figure than in many instances it cost to produce it, was not a bad gamble.

Wages at Many Places Go Down.

Mr. Scofield stated that he had advices from leading authorities in the United States that, while no changes in the situation over there might be expected for six months at least, yet it was generally conceded that 1921 was going to be a banner year in structural operations. The automobile industry had gone flat and was pretty well stocked up with lumber; furniture factories and musical instrument makers were also quiet and this had greatly reduced the demand for hardwoods and created a depression in wages. One member stated that in a large concern in Flint, Michigan, some workmen who were earning from $8 to $16 a day, until recently, were now glad to get their jobs back at 42½c an hour. Many other concerns were also reducing wages and the men were accepting the same without demurring.

President Sanders stated that in 203 cities in the United States building operations had fallen off during September, some 40 per cent., as compared with a year ago, and he was informed that unless the building laws in many populous places were amended, things in the construction line were going to be rather quiet. All the big fellows in the lumber arena were holding on to their stock but many a little fellow had to turn it over at the present time because he could not afford to retain it and pocket a loss. Men, who had money today, were not locking it up in lumber stocks.

Express Sympathy With Mr. Ludlam.

A resolution was passed, expressing sympathy with Mr. A. Ludlam, of Leamington, one of the oldest and honored members of the association, who has been ill for a long time. The secretary was instructed to send him some flowers and expression of hope for his recovery.

Mr. Hadley brought up the matter of the organization known as the "Hoo-Hoo," which has for its motto, "Health, Happiness and Long Life." During the war the work of this social organization among lumbermen had been intefered with but now it was coming back stronger than ever. H. R. Isherwood, of St. Louis, secretary-treasurer, would shortly visit Ontario and other parts of Canada, to establish branches. Mr. Hadley endorsed the work of the Hoo-Hoo.

A resolution was also passed endorsing the work of the Board of Arbitration as composed in the Trade Relations Committee of the O. R. L. D. A., and this question will be further dealt with at the annual meeting of the provincial association in February next.

A hearty vote of thanks was also tendered President Reid for coming such a long distance to attend the gathering. It was the feeling of the members that more frequent sessions should be held, one at least every two months.

Fishing Club for the Retailers.

Mr. Reid introduced the matter of forming a Lumbermen's Fishing Club and having headquarters on the French River. He spoke of the delight which "the boys" had experienced on their annual trip to Lake Nipissing last summer and the splendid fishing in the French waters. He thought that a club could be formed, a charter taken out and many a dealer spend a few weeks profitably with his family as a permanent summer clubhouse amid ideal environs. Mr. Reid said that he merely introduced the matter for an expression of opinion.

The sentiment seemed favorable and the matter will be further dealt with at the annual meeting of the O. R. L. D. A.

The afternoon session was a very breezy one. W. A. Hadley spoke ably and well on "How Can We Improve Our Association," while Mr. Scofield gave a short talk on "Millwork and Its Cost." Mr. McEachern led off in a discussion on "Can We Get Too Chummy With Wholesalers." This brought up various other matters, all of which will be referred to at greater length in the next issue of the "Canada Lumberman."

The Gathering Was Representative.

A. R. Sanders, president of the Southwestern Ontario Retail Lumber Dealers' Association, presided, and those who signed the register were: B. F. Clarke, Glencoe, secretary; W. A. Taylor, Ridgetown; Neil Watson, Mull; G. D. McPherson, Merlin; C. M. Smith, Aylmer; George H. Belton, London; Allan McPherson, Glencoe; John C. Wallace, London; George N. Kernohan, London; W. H. Longfield, Mount Brydges; E. C. Russell, Walkerville; J. C. Scofield, Windsor; C. S. Hadley, Chatham; M. R. Bogart, Chatham; D. J. McEachern, Alvinston; F. H. Laird, Dresden; J. McKinnon, Sarnia; L. H. Richards, Sarnia; P. G. Piggott, Chatham; L. Dagneau, Chatham; C. H. Belton, Sarnia; H. S. Ludlam, Leamington; S. C. Hadley, Chatham; W. A. Hadley, Chatham; T. C. Warwick, Blenheim; S. L. Goatbe, Comber; John B. Reid, Toronto; G. B. VanBlaricom, "Canada Lumberman," Toronto.

Budget of Briefs from Busy East

The S. S. Erginus sailed from Alma, N.B., recently carrying about two million feet of deals, which were shipped by C. T. White & Son. It was the last vessel to load there this season for overseas, but about two million feet of lumber will be shipped to St. John by schooners and scows.

The operations of the E. Burtt Lumber Company, of Burtt's Corner, N.B., will be confined largely to getting out pulp wood. The company cut eight million feet of logs last winter and will carry over two million feet. They plan to get out during the coming season about eight thousand cords of pulp wood.

At the Crown Lands Office in Fredericton recently three lots of vacant Crown lands were offered for sale and bid in at the upset prices as follows: 92 acres, Lot A, Victoria settlement, Carleton county, to Russell R. Rose, upset price $3 per acre; 17 acres, Lot 1, in the Ranger Settlement, Victoria county, to Archibald L. Monteith, at the upset price $2 per acre; 200 acres lots 62 and 60, west of Baker Lake, Madawaska county, to Joseph David, upset price $2 per acre.

R. B. Smith, M. P. P., for Sunbury county, N.B., had a narrow escape from death recently at the Valley River Lumber Company's mill at Oromocto, of which he is manager. The accident happened while Mr. Smith was superintending the work in the mill. In passing a revolving shaft his attention was taken for a moment and before he realized the danger the lower part of his woolen sweater was caught by the rapidly moving belt. Although knocked off his feet by the sudden impact he did not lose his presence of mind but braced himself for the tug-of-war. A less robust man would have been instantly whirled to his death. By exerting his full strength he succeeded in bringing the pulley to a stop, but he was unable to hold it. His clothing was stripped from his body and torn to shreds, but was the means of saving his life

The St. John River Log Driving Company closed its season on the St. John River a few days ago when rafting on the Douglas Boom was ended. For some days crews of the company will be engaged taking in booms and other gear and stowing them for the winter. The date of closing is about the average for recent years, but under the system of rafting at both the Douglas and Mitchell booms the season frequently closed in September with the logs all rafted. The quantity of lumber rafted by the company in 1920 is upwards of forty million feet, but exact figures are not yet available. It is about the average quantity for the past few years. Five million feet of lumber will be carried over at the Douglas boom until the season of 1921. The heavy rains of September brought much lumber into the boom, which otherwise would not have been secured. It also brought enormous masses of driftwood and other debris, which is held in the boom with the lumber. This makes it difficult to estimate the exact amount of lumber there. It is believed that there will be a great rush of driftwood in the spring.

The quantity of lumber to be cut in the New Brunswick woods during the coming winter will be less than fifty per cent. of this season's output, according to some of the leading lumbermen. On the north shore reductions will be even greater and the curtailment will amount to little more than a third of this year's amount. The principal reason for curtailment is said to be due to the labor situation, which, it is contended, makes it impossible to operate profitably. The Stetson, Cutler Company, which includes the Shives Company on the Restigouche and a number of minor subsidiaries, plan on reducing their cut from seventy to not more than twenty-five million feet and other American-controlled companies are said to be doing likewise. The Miramichi Lumber Company will reduce their cut more than one-half, most of their operation this year being on their free hold land; while the Dalhousie Lumber Company, which is controlled by the International Paper Company, will not have any camps this winter, and will only handle six million feet, which they are obliged to take under an existing contract. The Nashwaak Pulp and Paper Company are said to have paid as high as $90 to $95 for men to work on their operations this season and are said to have acquired all the labor necessary. Other lumber companies engaging men are said to have made $70 to $75 the maximum figures they will pay and in view of the outlook and the curtailed cut declare they will not be justified in paying more.

A Progressive Lumberman Legislator

Geo. Jones, M.L.A. Apohaqui, N.B.

George Jones, who was recently re-elected as an Opposition supporter in Kings County, N. B., has been a member of the Legislature for that constituency for the past twelve years. He was first chosen to represent the riding in 1908 and again in 1912 and 1917, and states he has always been a supporter of the Conservative party.

Mr. Jones is the founder of the mercantile business carried on by Jones Bros., who have been engaged in logging and manufacturing lumber for the past twenty-three years. They cut from 3,000,000 feet to 7,000,000 feet yearly in spruce, pine, hemlock, and hardwoods. All the limits of the firm are freehold, as there are no Crown lands around Apohaqui. Mr. Jones is president of the St. John Daily Standard and a director of the Bayside Lumber Co., Bayside, Halifax County, N.S., and has always taken a deep interest in anything pertaining to the welfare and advancement of the lumber industry.

In the last issue of the "Canada Lumberman" it was stated that John A. Young of Taymouth, N.B., who was successful in the recent provincial contest in York, was a Government candidate. It appears that Mr. Young was re-elected as an Opposition supporter and has always been such.

More Views on Shingle Selling

In discussing the packing and sale of red cedar shingles, C. M. Smith, of Aylmer, Ont., says: "Our customers prefer shingles packed in four bunches to the M and they do not care for the pack four bunches to the square."

L. H. Martyn & Co., of London, Ont., remark: "We have sold nothing else this year but the square unit and have had no trouble whatever and we have just ordered another car of the same. We certainly would not care to change back again as we find that the average purchaser will inevitably compare the price of a M. shingle against a square of another roofing to the disadvantage of the shingle. This, of course, can be explained away, but life is too short to waste time instructing some people. We will be glad if all the mills adopt the square unit for next year."

An Expert in His Vocation

Henning J. A. Helin, general superintendent of the Whalen Pulp & Paper Mills, Limited, has lived in Canada for the past eight years. He enjoyed a thorough technical and well-rounded experience in the pulp mills of Sweden before coming to the Dominion, and is one of the recognized national authorities in the production of chemical pulp.

Mr. Helin was born in 1879 and educated at the Technical College of Norrkoping, Sweden. For some years he was technical manager and director of the Wayagamack Pulp & Paper Co. of Three Rivers, but of late years has been associated with the Whalen Pulp & Paper Mills in British Columbia. Mr. Helin is vice-president of the Swedish Association of Canada and vice-president of Fibre-making Processes, Inc., of Chicago.

Lumber and the Cost of Building?

Asked his reason for putting off building a home of his own, the average man will reply "Lumber costs too much." He does not consider any other items entering into the construction of the house. He isn't in a position to know probably, that the items of carpenter and mason work, for instance, cost almost as much as the lumber. He hasn't been shown the distribution of cost on the average sized house, and he actually asserts that the cost of lumber prices, sometimes even—strange as it may seem—on a house built of

The lumber dealer can readily learn, upon looking over brick or other material, says the Long-Bell Bulletin.

prices on jobs he has sold, that the lumber bill represents only a comparatively small per cent of the total cost of a house.

A responsible architect recently was talking to a friend on this subject.

"Do you realize that the bill for lumber for a twelve thousand dollar house represents only nineteen per cent of the total cost?" he asked. "I have just completed building a house of this cost and have gone over the figures. I believe, in houses of this sort, that the lumber will average from eighteen to twenty per cent of the total amount spent.

The per cent cost of lumber in a house will vary of course with local conditions. The cost of labor is a large item that changes with every locality.

This is the opinion of this architect, and the figures he states probably represent an average estimate of the cost of lumber for houses of this type.

Knows Little About the Items.

The average man who proposes to build a home usually knows very little about the items necessary for building his home. When he thinks of building he immediately thinks of lumber and recalls all that his acquaintances have told him of the enormous increase over pre-war prices. He does not think in connection with the building of his own home of the increased cost of labor; of the advance in cement and other building materials; of the increased cost of plumbing, heating plants, electric wiring and fixtures, hardware, guttering and tin work. He is presented with an estimate of the entire cost of the house, a large part of which he blames on advanced prices in lumber.

Of course it costs more to build now than it did ten or twenty years ago. Aside from the advances that were made in every commodity, including farm products and manufactured articles, the man who builds the unpretentious home in these days, demands a great deal more in his house than was formerly necessary. It used to be that the cost of coal oil lamps, tin bath tubs, stoves for heating, and equipment for cooking were not included with, nor charged against the cost of the house. These were items purchased separately and considered as moving personal property rather than fixtures of the home.

What an Estimate Includes.

In these days it must be remembered an estimate of building a house usually includes the cost of the heating plant, the plumbing, the electric wiring and fixtures, a bath room fitted with fixtures as expensive as living room furniture. The average man even demands more in the exterior appearance and the interior furnishings of his house than used to be the case—a development that makes homes more worth while and yet furnishes one of the real reasons for the increased cost of living. A square type, plain finished house with old style roof has seldom been considered by a man planning to build a home of his own. Many home builders have found reasons for admiring an improved type of house, with cut-up and getting as far away as possiple from straight lines and square finish. The demand for houses of this type materially increases the cost of the building.

The man who proposes to build—particularly if he has been led to believe that any decrease in the price of lumber will reduce to a great extnt the cost of building—is entitled to know the facts. He should be told that a reduction in building costs of any appreciable extent is not dependent so much on the reduction in lumber prices as it is on the decreased cost of labor, hardware, plumbing, heating and lighting fixtures and other miscellaneous items. That is—every item entering into its construction, amounting to some eighty per cent outside of the cost of the lumber, must decrease proportionately to lumber before building costs are anywhere near what was considered normal before the war. No man knows when labor and these other building materials will return to normal conditions or whether, in fact, they ever will return to it.

Put the facts regarding the distribution of home building costs squarely up to the man who is intending to build at some future date. Let him see where the big items of expense must go. Let his judge whether he wishes to wait for all these miscellaneous prices, including labor, to come down. Let him be assured that the price of lumber is not responsible for the high cost of building, and what is more, that any significant change that might be made in the price of lumber would make only an insignificant reduction in the entire cost of his home.

One Great and Enduring Thing!

A philospher recently said that we are living in a brutal, materialistic age, giving more reality to stupid, physical things, than to God-like, enduring ideas; that are building 40-storey office structures, but writing no Hamlets; riding in aeroplanes, but writing no Illiads.

To a considerable extent and from many viewpoints, the gentleman was right. But there is one particular way in which he was wrong.

There is one particular direction in which the thinkers and workers of this age have progressed further than in any previous age or generation, and that particular direction is one that means more for mankind in general than either Hamlets or Illiads—beautiful and enduring though they are —can possibly mean.

That direction, is the science of Home Building.

In the old days when this world was young, mighty men of mighty ideas constructed the Pyramids of Egypt—the Parthenon at Athens; and to this day men marvel at the wonders that they wrought.

But the people that built those wonders of the world—skilled builders, as all generations since have proclaimed them to be—lived in shelter that no self-respecting bulldog of this day and generation would care to call his own.

Homer wrote his Illiad and his Odyssey, and sent these priceless literary pearls down to us through the ages, and we almost worship at the shrine of his genius.

But Homer never knew the real comforts of home. For in those days of inspired ideas of one kind, the home making idea was lacking.

Shakespeare gave us his wondrous writings and his shrine grows brighter every day as we laud his genius.

But Bill never looked through a clear pane of window glass in his life; never dreamed of the conveniences of a modern bathroom; slept on a spring mattress; never dreamed of a built-in book-case; never saw a glazed sun parlor; or a cool-air sleeping porch; and what he didn't know about steam heat, and refrigeration, and kitchen sinks, and running water on tap, and ventilating windows, and all the other comforts of home, would fill a bigger book than any he ever wrote.

For we, of this generation, have done and are continuing to do one great and enduring thing; we have learned the science of practical, attractive, convenient, comfortable, modern home building.

People can be no better than the homes they live in. Cities can be no better than the average of their homes.

Pride of home ownership is one of the strongest of all civilizing influences, and if you can make the people love their home, you have saved that people from the blight of Bolshevism.

As home builders of the nation, using their utmost ingenuity to help their people to have better homes, the lumber industry has a marvelous future.

They are engaged in making the most beautiful and enduring of all dreams come true.

They are tapping the infinite and translating into terms of human thought and the finished product is spelled—home.

For of all our civilizing influences, it is homes that shall longest and strongest endure.—Gulf Coast Lumberman.

Toronto Company Wins Siding Case

The complaint of the R. Laidlaw Lumber Co., Toronto, that the C.P.R. exact the team track interswitching toll of two cents per hundred pounds on cars unloaded by them on a private siding of the Toronto Power Co. at North Toronto, was recently heard before the Board of Railway Commissioners at a sitting in Toronto and judgment at the time was reserved. Decision was given a few days ago in favor of the Laidlaw Co.

It appears that the latter take delivery of lumber consigned to its Spadina yard on the siding in question, which is used as a team track, but the C.P.R. has been charging the lumber company with interswitching toll on traffic ex connecting lines. One of the principal questions, decided in this issue, was whether deliveries made by the railway company to the complainants should be construed to be deliveries upon a team track or upon a private siding.

In delivering judgment the Board of Railway Commissioners say in part: The circumstances do not permit of the conclusion that we are asked by the railway company to make, viz; that a private siding may, under one set of circumstances, retain its rights and privileges as such to service by the railway and in another set of circumstances, may lose them and may become as to tolls etc., only a track team. The team tracks of a railway are part of its terminal facilities to provide for its own traffic, and because the railway is entitled to receive a fair return for the upkeep of its terminals and the use of its property, it is allowed, by the Interswitching Order, to charge two cents per 100 pounds on freight there delivered because use is made of that part of the terminal facilities.

In the case of deliveries made upon private sidings, the terminal facilities referred to, are not used and, therefore, if we were asked to regard the spirit of the relative rates, the railway should not be entitled to make a charge as for use of terminal facilities, where none are used.

To adopt the railway's argument would mean that private sidings, as in this case—may, in certain events, be made use of by the rail-i.e. sidings built on private lands, and at the expense of the owner—way as terminal facilities, and the service there upon or thereto, charged for accordingly, which, in our view, is contrary to the spirit, if not to the letter, of interswitching principles. The private siding is, therefore, made to contribute to the upkeep of the railway's terminals, which involves conditions entirely unsupportable. The service was to a siding off the railway's property privately-owned, distinct from terminal facilities of the railway and, in every other respect, a private siding. It would seem that the rates of one cent or two cents for interswitching service to private siding or to track respectively attach as a result of the service to the one or the other and are not dependent on the conditions of such service, nor in the case of private sidings upon those rights of owner, inter parties, and railway and their assigns respectively, incident to such private sidings which the railway company asks the Board, in this case, to consider and determine as a basis of decision of the dispute involved.

Without reference to the rights of the parties respectively as to the user of the siding in question, and which are beside the direct issue involved, we are of the opinion that, as to all cars consigned to complainants (R. Laidlaw Lumber Co.) by the railway company on the private siding in question, the provisions of General Order, No. 252, clause 5 apply, and that the circumstances do not justify the railway company in charging more for that service than is permitted by that order for service to private sidings. Any charges in excess of those authorized paid to the railway by the complainants, the railway company will be permitted to refund.

Some Facts on the Lumber Situation

By K. M. Brown, Toronto, Ont.

The market is quiet, very quiet. No one denies this. The retail trade is holding off, as prices sag, waiting for "the bottom." There is manifested everywhere a lack of confidence in the stability of the present market, caused primarily by the Mental Attitude of the people toward all commodity prices. We believe that we can qualify that statement by giving you in the following paragraphs honest facts concerning the physical conditions surrounding the industry.

To begin with, the whole nation is hungry for shelter. There is therefore a potential demand in the country which must sometime materialize in a tremendous demand for building material.

Secondly, crops have been abundant, which means that the consuming public have the necessary funds available with which to build. Building credits must loosen as the harvest cash finds its way to the banks. The inability to finance building operations was a primary factor during the past season, but this factor will be largely eliminated during the coming year.

Again, stocks on hand at the coast mills are only 60 per cent.. of that normally carried. What does this mean to you? It indicates clearly that a sudden rush for stock would send prices upwards. Yet that is just what you are heading for. By refusing to buy your present legitimate requirements you are collectively storing up a demand which will stiffen the market fast when it does come. We don't want that, nor do you.

By placing your legitimate needs to-day, you would enable the mills to continue operating so that fair stocks would be available when spring trade opens and your requirements could be taken care of at level prices. As it stands to-day, many mills have closed down and many more are running only half time. When conditions arrive at a point where business is suspended, the bottom has just about been reached.

Have confidence in your market. There are one hundred reasons for it to every one against it.

Talk confidence to your trade. Arm yourself with facts and dispute the assertion that the high prices of lumber is curtailing building. Bring those facts before the consuming public. Show them how the total cost of a building is distributed. Show them the proportion of that cost which can be attributed to the lumber entering into the construction and the proportion assigned to brick, cement, fixtures and other commodities as well as to labor in excavation and construction. Predicted on cost, you are handling a commodity which is as cheap as any on the market today and cheaper than most. If you can prove this to the public you have overcome their mental attitude and you are on the road to brisk business.

The welfare of the manufacturer and the retailer are inextricably interwoven. Both desire a steady market. You can help secure this by making normal purchases at the present time. Selling at prices which are below the cost of production and runaway markets are equally damaging. The issue is squarely up to you. How will you meet it?

A Prescription

If you are poor—work.

If you are rich—continue to work.

If you are burdened with seemingly unfair responsibilities—Work.

If you are happy—keep right on working. Idleness gives room for doubts and fears.

If disappointments come—work.

If sorrow overwhelms you and loved ones seem not true—work.

When faith falters and reason fails—just work.

When dreams are shattered and hope seems dead—work. Work as if your life were in peril. It really is.

No matter what ails you work. Work faithfully—work with faith.

Work is the greatest material remedy available.

Work will cure both mental and physical afflictions.

Silent Partner.

Spelling Opportunity

Do you remember the childish superstition about the pot of gold, buried where the rainbow touched the ground? But no one has ever found the end of the rainbow.

Many a poor wanderer has followed the glittering lure of "easy money," only to return after wasted years, weary in body and broken in spirit.

The home stayer and the home makers are men who find prosperity and happiness.

The worker who wanders from job to job, and form town to town, is following a rainbow that has no end.

Serve your own selfish interest by staying with the employer who pays a just recompense for your skill and energy.

Invest years of faithful service. Your reward will come in promotion, and your employer's good will.

There are days when men are too few for the work that must be done.

There HAVE been years (and may be again) when men were plentiful and jobs were few.

When the day comes, that men must be laid off, be one of the workers selected to stay.

Your employer isn't deaf and dumb and blind.

If he knows the men who are loyal, when the temptation to follow the rainbow lure is strong.

Keep to the work you know best—it's a necessity now, and good business ANY time.

Opportunity can be spelled with four letters—WORK.

How British Columbia Protects Its Timber

Forestry Has Become Direct Commercial Force—Adoption of Modern Methods in the Service is Working Out Admirably—Looking to the Future

*By M. A. Grainger, Victoria, B. C.

M. A. Grainger, Victoria, B. C.

Saving waste by improvements in machinery is the keynote of the Logging Congress program, so I will begin by telling you what progress we have made this past summer, in British Columbia along these lines. There was a demonstration of of the wireless telephone at our Portland meeting this time last year. Immediately after that, our Forest Service took the matter up and arranged for tests to be made in February at the quarterly meeting of the forest protection committee. This committee consists of representatives of the timber owners, loggers and lumbermen of the province along with the forestry officials. It is a co-operative, advisory committee which helps in working out our yearly campaign against forest fires.

Two companies competed in the wireless test, over a distance of 74 miles, Victoria to Vancouver. The demonstration of the Marconi company was satisfactory. Contracts were therefore drawn up, and, in May and June, wireless telephones were installed at three shore stations and aboard five of the launches on which our coast rangers carry on their work. The instruments were rented by us on a five-year contract; the company to keep them in proper working condition, and to give the Forest Service the benefit of any improvements in equipment which may be developed during the contract period. A full set for receiving and sending was put at each shore station, but on account of inability to obtain small transmitter apparatus at the time, the receiving hall only was put on the launches. By using buzzer, however, the ranger on each boat can send a wireless telegraph reply in Morse code, so that we really get communication both ways. There is a smaller compact instrument now en route for use on the launches, which, when installed, will both send and receive by telephone. The present machines run on 110 volts and a very small amperage. At Vancouver power is furnished by the local power company; at Van Anda, the next station, from a gas engine; and at our ranger headquarters, Thurston Bay, from a little hydro-electric plant.

Obstacles of Wireless Service.

There have been difficulties, of course. The big wireless stations on the coast create interference. In addition, at Vancouver, the street car and other high tension power lines create an obstacle which may possibly be overcome, but may make it necessary to move our installation to the outskirts of the city. We have been using a special operator at only one shore station, but may have to put a man at each. The high mountains of the coast and the many islands cut down the working range of each station, but our original fear, that they might prevent transmission of messages, has been proved groundless. In fact, outside Vancouver, the whole system is working satisfactorily except for jamming of the air by the big wireless telegraph stations. This difficulty can be overcome by adopting a different wave length, say 2200 to 2500 metres, instead of 1800, as used at present. The land stations are about 70 miles apart, the launches work on a radius of 40 miles from the stations, and the saving of time and money, and increase in efficiency of public service have been very noticeable.

As an instance, Vancouver sent a message to Van Anda to alter certain arrangements; the ranger concerned caught the message direct 130 miles away, as well as getting it relayed from Van Anda, and it saved him a useless journey of 100 miles each way, with an economy of over $60 in launch costs and men's time. On another occasion, a lumber company in this city heard there was a fire on its holdings a hundred miles away, was in conversation with the local ranger in half an hour, and had his report on the facts first thing next morning. Moreover, Mr. Caverhill, the regional forester in charge of southwestern British Columbia, kept in constant touch with business transacted in his office in Vancouver during a two-weeks' inspection trip on board one of our launches, which he made recently in the logging country north from Vancouver. We would be pleased if any members of this audience care to go around to his office to see and discuss the phone. We believe that in the mountainous region northwards, where dense forests and the network of deep tortuous channels make ordinary telephone communication both difficult and expensive, this wireless system is going to be very useful to logging operators. Of course, wireless telephony is only just emerging from the experimental stage and the further problem must be worked out as to how a number of logging camps could ring into a central station without jamming the air. On party lines in ordinary city telephones this difficulty has been solved, and presumably it will be also in wireless.

Mechanical Attack on Fire.

A man was showing me over one of the pulp and paper plants back east last summer. He said: "These giant turbines in our power plant, the complex paper-making machinery in our mill, show what marvelously efficient thinking has been done to improve manufacture. And our products are marketed by the most up-to-date salesmanship on this continent. But in the woods, on which this large investment depends absolutely no thinking whatever has been done. The same old woods foreman is cutting timber in the same old way that he did 50 years ago; the hardwoods are killing out spruce reproduction; and 50 years hence, both mill and investment will be doomed unless we go into the woods and do that thinking now."

There is a similar lack of balance which we are trying to remedy in forest fire work. Motor patrols, wireless telephony, publicity, have all been brought into use, to detect and prevent fires; but the actual attack on a forest fire has kept on being mostly a pick-and-shovel, gunnysack-beating affair. Feeling that these useful articles are not the last work of modern fire fighting science, the Forest Service has been testing portable gas driven pumps. We have over 40 now in use, and the results have been most satisfactory. They do not replace picks and shovels, but supplement them much as a machine gun gives powerful support to rifle fire. Where water is available, one pump does the work of 20 men and far more efficiently. Near Cranbrook a single pump was largely responsible for keeping fire out of a valley containing 200 million feet of timber. Up this coast, the inhabitants of a little sawmill settlement had given up fire fighting one day last summer, and were watching the approaching fire in despair, when one of our launches arrived. The ranger and a pump came into action, and in a very striking manner the whole settlement was saved. Wherever a logging operator sees the work these pumps can do, he says he will get one for himself at once, and I hope he does not forget next day.

The pumps are gasoline-driven; weight 170 pounds; throw 45 gallons a minute, with a 180-foot head and cost about $800, with 1000 feet of hose, complete. By using a relay tank, a couple can be used on a working radius of 2000 feet.

Aviation.

For co-operative work with the various government services, the Canadian air board has just equipped a seaplane station near Vancouver, with hangar, slipways and machine shop. Two types of machine are provided for—the big, heavy twin-engine flying boat that can carry 14 persons, including the crew of three, or the same weight of fire pumps and equipment; and the medium size seaplane carrying one pilot and four passengers. For the present, we do not figure on patroling in the air to detect fires; the main idea is to provide a taxi service, with machines ready to take the air in any fire emergency.

When in England last August I was interested to notice how the London-Paris-Brussels air service had taken its place along with the railways as an ordinary means of travel, an average of 350 passengers a week travelling on the mail planes. The service is said, however, to be hardly on a paying basis yet.

Pulp Mills Coming West

There are temporary causes which make the shortage of pulp and paper back east very acute just now. Business concerns have the alternative of handing over money to the government as excess profits, or of spending it in advertising. The great increase in adver-

*Paper read recently before Pacific Logging Congress.

tising thus caused a corresponding increase in the use of paper, pulp mills unable to get delivery of additional machinery until 1921, scanty and inefficient woods labor, create an unsatified demand for pulp and paper which introduces a touch of boom into the hunt for further pulpwood supplies. But with all due allowance for temporary conditions some things are plain enough. There is not room for more pulp mills in the eastern states and the mills now operating are faced with a diminishing supply of wood.

In Eastern Canada there are a large number of mills now in operation with wood supplies for half a century ahead, and the present output of pulp will be increased as new machinery becomes available, present plants are enlarged and additional mills are put in to utilize timber areas still untouched. But investigation of the reserve forests away up north is showing that a very definite limit will be put to this increase. Fire has injured great areas, others are lightly timbered, and it is becoming plain enough that, however great the total stand may be, eastern Canada's capacity to meet this continent's demand for pulp and paper cannot be calculated, gloriously, by looking at the big spread of country shown on the map. The fear of the future is already driving some pulp companies to buy land and plant trees; exploring parties are out to pick up every accessible area; chemists are hard at work finding out how to use the poorest kinds of timber; and some concerns are even about to take the last revolutionary step of cutting methods that will give nature the chance she needs to produce another crop of merchantable timber.

To anyone in my line of business the thought of a logging concern cutting with a serious commercial eye towards reforestation is rather humorous, after the way operators have laughed at that sort of thing as sentimental forestry.

Interest in Pulp Development

People all over the East are talking pulp. Controversy rages between publishers' associations and producers on each side of the international boundary, one country calling loudly for raw material, which the other holds back. Great Britain keeps on worrying over her supply, and a conference of newspapermen of the British Empire toured Canada this summer and inquired about pulp. Government offices in the West are kept busy month after month with the procession of people who want to find out about western pulpwood. Promoters travel to and fro submitting propositions to financial houses in London, Chicago and New York. Special publicity is given to the pulp resources of Alaska. So, with all due allowances for temporary causes, which are adding an element of excitement, it seems plain enough that there is a big movement on foot, and that the pulp and paper industry is being compelled to come out West to the last great pulpwood forests of the continent.

On the Pacific Coast pulp and paper manufacture has got past the pioneering stage. It is an estabiished business with an appreciable yearly output and an increasing marked demand. But with half a dozen mills in a country the size of British Columbia, it is plain that only a beginning has so far been made. Think of the hemlock-spruce forests that spread along the Pacific slope northward from the main fir-cedar belt, both in this province and Alaska; the great stretch of the second wet belt (the Selkirks) with only one mill drawing any pulpwood from it; the Northern Interior timber, with modern chemistry prepared to show how even inferior species like lodgepole can be made use of in producing pulp. Besides all this, there is the immense stand of pulp timber that is mixed with sawlog material in the fir-cedar regions. Here it is that we need the pulp and paper business most particularly—from the logging and forestry points of view, so as to make it possible to save some of the tremendous waste of stumpage that now takes place in opening up a tract for sawlogs only.

Western Logging Due for Change

We are surely on the brink of change in western logging. The world has never seen timber massacred on such a scale before. There is more knocked down and wasted than ever grows in most other countries. It creates the worst kind of fire trap. It even shocks us on the Coast where we are pretty well hardened to every form of waste there is. Fine young hemlock down and burned; more of it littering the ground, unburned; still more untouched and useless left when the logging roads were taken up—these were three pictures in one operation which Mr. Palmer, of Chemainus, asked me to send a good forester around any highlead works.

I know there is the old anecdote to be remembered about the North Pole explorer who would have been a millionaire if he could have got all that ice into New York on any Fourth of July. It is true enough that whatever value the hemlock, balsam, small fir and cedar knocked down by high leads might have had if it were in an European forest, it has had no value here. But change is in the air. The problem of taking out small stuff along with the big has become one of front rank importance to pulp companies and the movement westward of the pulp and paper industry, which is now on foot, is a guarantee that commercial causes will soon bring to an end this period of tremendous waste. After all, the high lead system is still in its infancy and engineering talent will find out how to get a double crop of timber, small stuff as well as big; now that it may pay to do so. Only a mile or two from where this Congress is assembled experiments have been made this summer in getting off pulp material—in poles and four-foot lengths—ahead of the sawlog operation; and at Mr. Palmer's camp 5 on Vancouver Island they are figuring into cradles which can be lifted bodily onto the cars.

British Empire Conference

There was a meeting in England this summer of representatives of timber interests and forestry services from all over the British Empire. It was noticeable how these people look upon the West as the home of logging engineering, so much so that some governments overseas are beginning to require certain members of their forest services to study on this coast. This is in line with our western point of view which requires that forestry and forest education should have a much broader and more commercial meaning than the old academic one which was concerned mostly with the tree growing end of the business. The western forester must have knowledge of the work and difficulties of logger and lumbermen and wood-using industries. The recent $30,000 investigation into western larch showed how five times the value of the usual sawmill product can be obtained by making soft felting from the fiber, hard board from the chips, baking powder and an acid for fixing aniline dyes from the juice of larch. This was a matter of forestry. So is the interesting attempt now being made to base a new industry on the extraction of pitch from Douglas fir, following up an European method of boring small augur holes in the trees and securing a high-grade product which, once the factory stage is properly established, will create value for another form of western waste—the pitchy tree that grows on the dry, rocky waterfront.

If forestry has gotten away from its sentimental mothers' meeting connections and has become in many ways a direct commercial force, as for instance in helping the pulp and paper industry to use new kinds of woods or in showing manufacturers how the best box is made; if the forester has to be more of a business man interested in the prosperity of forest industries as well as in the growth of forests than he started out to be, I would like to ask the logging operators of the Pacific Coast whether they on their side should not take a corresponding interest in the tree-growing end of forestry. Progress goes in waves. Eight or ten years ago a considerable body of public opinion was worked up to support forest fire prevention. The war held back improvement, but we are now on a fresh wave ready to resist our whole mental picture of what forest protection should be and to undertake it on a far more effective scale. Surely the logging community should feel that the Pacific Coast is about due for a wave of progress in regard to forestry proper. We are cutting blindly into these western forests. The business of all concerned is simply to turn so many logs into so many dollars. Why not take a little interest in what is happening to the forest upon which all this industry depends? Why not give your support to a little study of how nature can be given the best chance to reproduce the timber now being taken away? After ten years of forest service work I can say that none but a forestry official can fully realize the lack of interest which the West takes in its own future.

Grubbing Hoe as Weapon For the Pines

Experiments in the warfare against the white pine blister rust, which are being carried on both in the east and in the central west, begin to point the way to better methods of attack. Such is the report of E. G. Cheyney, head of the forestry division of the Department of Agriculture, University of Minnesota.

The white pine blister rust, like the black stem rust of wheat, is kept alive and spread by a plant ally of the disease. The group of plants siding the blister rust is known as ribes and is made up of the various species of currants and gooseberries. Spores form diseased pines cannot carry to other pines and infect them. The spores must first find lodgment on a currant or gooseberry bush and there develop a new spore. This may then be carried to pine trees to infect them. This may then be carried to pine trees to infect them. If, therefore, the ribes tribe can be eradicated or greatly reduced, the danger to the pine area will be removed, or at least greatly reduced.

Understanding this situation, Mr. Cheyney began at Rush Lake, Minn., a series of eradication investigations. In the course of these investigations in 1919, he uncovered the important fact that instead of pulling up the ribes plants, the best method seemed to be to grub them out. The reason was, that in the work of eradication it was found that neither from pulled nor grubbed plants did there spring any root sprouts except where the root ends were exposed to the light. The inference from this was that the cutting off of the roots would seem to be more effective than pulling, for ordinary care would prevent leaving pieces of crown in grubbing, while only extraordinary care could prevent the leaving of exposed root ends after pulling. It is believed that the discovery of this fact will simplify, to some extent at least, the problem of eradication.

Death of Mr. David J. Buckley

A prominent and highly-respected lumberman of the province of New Brunswick passed away recently in the person of Mr. David J. Buckley, of Newcastle. He was one of the leading lumber operators and mill owners in the busy Miramichi district and had been in failing health for several months.

The late Mr. Buckley was 56 years of age, was the sole owner of the large and up-to-date plant at French Fort Cove and also the Nordin mill. Mr. Buckley originally operated a large mill at Rogersville, N.B., and in 1911 erected the splendid plant at Newcastle, which has a capacity of about 9,000,000 superficial feet a year.

Mr. Buckley was chairman of the Lumbermen's Association for Northumberland county, and had a thorough, practical knowledge

The late D. J. Buckley, Newcastle, N.B.

of the various ramifications of the industry. He was a member of the Crown Lands Advisory Board, which was established in 1918, being the representative of the lumbermen of New Brunswick on that body. He was also the first president of the Lumbermen's Protective Association, from the presidency of which he retired in June, 1918.

Mr. Buckley was a man of keen business instinct, high sense of honor and one of the most successful operators in the province. Surviving him are three children, two daughters and one son, L. W. Buckley, who has been associated with his father for a number of years in the business. Mr. Buckley's mother also survives and resides in Moncton. The funeral, which took place from his late residence to St. Mary's Church, Newcastle, was attended by lumbermen, who took occasion to pay their last tribute of respect to one who did everything in his power to further and uphold the standing and welfare of a great industry.

American Lumber Cut Slightly Larger

The lumber cut of the United States in 1919 will vary from that of 1918 by only a relatively small quantity, according to a preliminary comparative report recently issued by the Bureau of the Census, compiled in co-operation with the Forest Service.

The statement shows the production of lumber for 1918 and 1919 by 788 identical mills each of which cut five million feet or more in either one or both of these years. This group of large mills normally produces more than 1/3 of the total lumber cut of the country. The mills are located in 34 states, therefore production conditions in practically all lumber section of importance are represented.

The total cut of these 788 mills as reported in 1919 shows an increase of only 3/10 of 1 per cent. over that of 1918. On the basis of a 32,000,000,000 feet production for 1918, this would indicate a total cut for 1919 of approximately 32,100,000,000 feet.

The largest state increase of 1919 over 1918 is shown in Washington where 124 mills report 2,856,909,000 feet in 1919 and 2,732,054,000 feet in 1918. The largest decrease is indicated as in Minnesota, where 21 mills cut 158,787,000 feet less in 1919 than in 1918. Ninety-six mills in Louisana, the second largest lumber-producing state in the union, (Washington is first) cut 1,750,670,000 feet in 1919 or 93,022,000 feet less than in the previous year. In 1919, Oregon, the third largest lumber-producing state, fell slightly below its production of 1918, according to report of 31 mills,

Canadian Lumber for New Zealand

If building and other improvements are to be carried out as contemplated within the next few years, large quantities of material must be procured from Canada and the west coast of the United States, says a recent despatch from Auckland, New Zealand. With this end in view a large corporation has been organized in New Zealand, with headquarters at Auckland, and has sent a representative to this country to arrange for a supply of lumber.

It is claimed that New Zealand within the next two or three years would consume 40,000,000 or 50,000,000 feet of lumber from Canada and the United States, and possibly this might be repeated during the next five or six years, for there must be a large amount of construction done in order to meet the demands of the rapid development in different sections of the country.

Coast Mills Selling Lumber at Loss

That lack of demand for lumber from the prairie provinces is forcing many British Columbia lumber mills to close down, which means a reduction in the supply, a condition that will eventually increase the price, is the statement made by a coast lumberman in the course of an interview recently at Calgary. He says that the mills are selling lumber for less than it cost them to produce, and with the pinched market and rock bottom prices received by the mills today, many of them are closing down.

By sacrificing the stock of lumber now on hand, the coast mill men are clearing out their supply, and when the 1921 demand comes there will be nothing to sell. This will result in a rush of orders which the lumbermen will be unable to meet, and this will force a further inflation of prices.

Scarcity of logs is another problem that the mills have had to contend with according to this lumberman. He says that during the past summer, when the loggers should have been getting their maximum output, many camps were closed by reason of bush fires. In September the rains, which lasted for 22 days, also raised havoc with the loggers.

"The summer's log cut is less than it should have been," he said.

" It is estimated that there is less than 50 per cent. of the amount of logs necessary at this season to provide the mills during the winter season, when very few logs are produced.

"Demand for logs being greater than supply, leaves little hope of any lowering in the price of logs, which average about $26 per 1,000 to the mills.

"Manufacturers of lumber agree that $14 per 1,000 ft. B.M. is the average cost of manufacture from logs to lumber, and loading it on cars for shipment at the mills. With $26 logs, the average value of lumber at the mills is $40 per M. The present on the few prairie orders being placed are averaging less than $37.50 per M., thus leaving a loss to the mill man of $2.50 per M.

"The resut of this condition is that approximately 1,000,000 ft. daily capacity of the coast mills is now closing down, and with continuance of present conditions other mills will be forced to follow.

"In August the coast mill's stocks were over 7,000,000 ft. less than at January 1, 1920. The demand, however, was light, therefore the relationship between supply and demand was such as to force mills to seek the market. Had the demand been normal, conditions would have been similar to those existing last February, when it was impossible to buy any volume of lumber.

"In the early part of the year, when wholesale prices were $52,50 for common lumber and $19 for lath to the prairie yards, the retail prices to the consumer were not raised, the retailer absorbing a loss on any of this extremely high priced lumber which he had to buy. Consumers of Canadian lumber on the American side of the line did have to pay these prices, but, fortunately, for but a short period of time.

Work of Airplane in Forest Patrol

Airplane forest patrols in California were able recently to reach the scene of a fire forty-five hours sooner than had they proceeded by train and pack mule, a report to the United States Army Air Service shows. An aerial observer spotted its blaze in Lassen forest while all foresters were engaged in fighting another fire in the Merced forest. Planes picked up the fire-fighters in the Merced zone and rushed them to the Lassen fire.

"In three hours," says the report, "the fire-fighting personnel was on the job fighting the flames, whereas, had they proceeded by train and pack mule, 48 hours would have been consumed.

"The day will come when men and equipment will be carried by airships to the scene of fire, both men and equipment dropped by parachute, while the airship will rain down fire-extinguishing chemicals from above."

Will Guard Well New Brunswick's Assets

Hon. C. W. Robinson, Moncton, N.B.

Hon. C. W. Robinson, who was returned on the Government ticket in the city of Moncton in the recent provincial elections, is the new Minister of Lands and Mines for New Brunswick, succeeding Hon. (Dr.) E. A. Smith, who resigned. Previous to his appointment to this important post, he was a minister in the Foster Government without portfolio. Mr. Robinson was opposed in the late contest by both an Opposition and a Labor candidate, but won by a large majority.

He is a warm friend of the lumbering interests and is president of Robinson, Wright & Co., who operate sawmills in Shulee, Cumberland county, N.S. He is a lawyer by profession and a successful one, too, and, in the political arena, he is a foremost figure, being looked upon as one of the ablest parliamentarians in the Maritime provinces. Moncton is his native city and it was in that progressive centre that he first saw the light of day fifty-four years ago. He was called to the New Brunswick bar in 1893 and has since enjoyed a wide clientele as a barrister and counsel. In 1896 he entered the political arena, being an unsuccessful candidate in Westmoreland for the House of Commons. The following year he was returned for the New Brunswick Legislature, and has been successful in every conflict since. Mr. Robinson was Speaker for the Assembly for six years and a member of the cabinet without portfolio. He was Provincial Secretary and later Premier of the province in 1907-8. His party having been defeated in March, 1908, he resigned the Premiership. Elected at the general elections in 1917, he accepted upon the formation of the Foster Government, a position in the Cabinet without portfolio. Mr. Robinson is a former Mayor of Moncton and a former president of the Board of Trade of that progressive city. In his new capacity as Minister of Lands and Mines, he will bring to bear upon his duties thoroughness, energy and aggressiveness.

Will Operate on Large Scale

G. Mason & Co., who, as stated in a recent issue of the "Canada Lumberman," have acquired the entire holdings of Manley Chew, Midland, Ont., say that they will operate on an equal, if not larger, scale than Mr. Chew, cutting their logs at the Midland and Thunder Bay mills, which are included in the purchase. The Midland mill is an exceptionally complete and modern one and will be run to capacity next season to meet both local and export requirements. The entire Canadian operations will be under the personal supervision of Major G. L. Main, who has handled all the Canadian ventures of Mason & Co. It is the intention of the new owners to retain the entire Manley Chew organization and to establish a record output for next season.

The purchase includes Mr. Chew's limits, comprisng five townships north of Sudbury, the Islands of Beckwith and Hope, in and Shawanaga. Roughly speaking, there is 250,000,000 feet of Georgian Bay, and licenses covering Whitefish Indian Reserve, Dell standing timber involved in the large transaction.

Pigeon River Co. Close Operations

The Pigeon River Lumber Co., Port Arthur, closed down recently after sawing up every log in the big raft which was brought to the mill early in the summer. During the past three weeks the mill had been turning out mine timber which was sent to the east.

The company recently suffiered a severe loss when their planing mill was destroyed by fire, but were fortunate in that all the lumber escaped except what was contained in the planing mill building. The loss in the planing mill was $30,000, with $20,000 insurance. It is stated that the company is yet undecided whether or not the directors will rebuild.

New Brunswick's Cut Will be Short

The quantity of lumber cut in New Brunswick during the coming winter will be less than fifty per cent. of this season's output, according to lumbermen who have been in Fredericton.

On the North Shore, it is said, reductions are even greater than elsewhere and the curtailment will result in the cut not amounting to but little more than one-third in some cases of this year's amount. The principal reason ascribed for the curtailment is the labor situation, which, lumbermen say, makes it impossible to operate profitably.

The Stetson-Cutler Company, which includes the Shives Company on the Restigouche and a number of minor subsidiaries, plan on reducing their cut from seventy to not more than twenty-five million feet, and other American controlled companies will do likewise. The Miramichi Lumber Company will reduce their cut by more than one-half, most of their operation this year being on their free-hold land, while the Dalhousie Lumber Company, which is also controlled by the International Paper Company, will not operate any camps this winter and will only handle some six million feet which they are obligated to take under an existing contract.

The Nashwaak Pulp and Paper Company are said to have been paying as high as $80 and $95 for men to work on their operations this season and those figures have secured all the labor they required for their operations. Other lumber companies engaging men here are said to have made $70 to $75 the maximum figures they will pay, and in view of the outlook and with the curtailed cut declare they will not be justified in paying more.

Making Examinations of Many Holdings

Messrs. James A. Conners and Edward W. Conners, of the James W. Sewall office, timberland cruisers and forest engineers, Old Town, Maine and Washington, D.C., have begun a systematic land examination of some of their holdings for Williamson & Crombie, Kingsbury, Quebec. This same office is also making a detailed estimate on the lands of McLachlin Bros. Co., Ltd., of Arnprior, Ontario, Mr. Lewis T. Calhoun being chief of party in this latter work which is considerable scope, the lands being situated both in Ontario and Quebec. Mr. W. H. Wentworth, another of Mr. Sewall's chiefs of party, has just completed an examination of a considerable tract for the Sissiboo Pulp and Power Company, of Weymouth, Nova Scotia.

Mr. Sewall reports heavy demand for services, with other crews besides the aforementioned ones, now out in Quebec, Nova Scotia and Maine. His office has been rushed with work this whole year, and has covered so far, in the neighborhood of 1,500,000 acres of land, both in the north, as well as in Tennessee and North Carolina. One piece of work undertaken was the entire land examination of 1920, for the state assessors of Maine; these gentlemen employed Mr. Sewall to care for all their cruising this year, a job amounting to several hundred thousand acres an various townships in Maine. On the reports returned to the assessors is based the valuation for taxation purposes.

Large Modern Mill Going Up at Wattsburg

The B. C. Spruce Mills, of Wattsburg, B.C., are constructing at that point a sawmill which will have a capacity of 200,000 feet daily, single shift. G. C. Robson is the general manager of the company, the officers and members of which are all Wisconsin and Michigan lumbermen, who have operated on a large scale in the United States for several years and are still operating there. The company is capitalized at one million dollars and has sufficient timber to run for many years, consisting largely of spruce and pine of good quality.

The mill equipment will consist of a band, gang, horizontal resaw and log splitter and in addition a five machine planing mill, all steam-driven. It will be necessary for the company to construct an entire new town, as there is nothing at Wattsburg in the shape of dwellings of value. The B. C. Spruce Mills will build a large store, an amusement hall, churches, schools, etc., for their employees to surround them with good conditions and conveniences.

Logs will be brought to the mill over a thirteen mile flume now under construction, of which several miles have already been completed. The president of the B. C. Spruce Mills is B. F. Wilson, of Wausau, Wis. M. P. McCullough, of Wausau, is secretary, and A. P. Woodson, of Wausau, treasurer. G. C. Robson, the general manager, comes from Merrill, Wis., where he was associated with the Kinzel Lumber Co.

Timber Situation in Great Britain

Timber is arriving from overseas in Great Britain in greater quantities than can be immediately absorbed, according to advices received by some Canadian exporters. The situation, it is said, will remain unsettled as long as imports continue to arrive without an immediate market. Financial stringency is undoubtedly at the root of the unsettled situation, for the country's need of timber is greater than the supply. High prices of wood, heavy taxation, and general difficulties of transit and trading are also hindering commercial enterprise. There is a great slump at present in the furniture trade due to high cost of timber, advancing wages and frequency of strikes. Casemakers and plywood merchants are doing but small trade. A fair demand, however, exists for all house-building sizes and for laths. Sawmill men are well supplied with work in connection with house-building requirements.

Canadian Hardwoods for Furniture

Leading Firm Devoting Special Attention to Birch Which is Capable of Being Working Up in Any Design

The importance of the use of Canadian hardwoods in furniture manufacturing has been appreciatively referred to from time to time in the "Canada Lumberman," and it is interesting to note that encouraging progress is being made in this direction. The matter has been taken up by a number of companies, manufacturers and lumbermen and is receiving attention to a degree never previously attained.

At a recent meeting of the Rotary Club of Toronto, A. E. Clark, a former chairman of the Wholesale Lumber Dealers' Association of Toronto and a member of the Board of Directors of the Canadian Lumbermen's Association, gave an impressive address on "The Production and Uses of Hardwood Lumber." In closing he stated that the hardwood lumbermen had his special place in the world, and in future when buying furnture, he (Mr. Clarke) hoped that his hearers would endeavor to purchase some pieces for their homes which were made from the products of Canadian forests. This reference was applauded and evidently developed a new line of thought on the part of several members of the large gathering.

In retail furniture circles the problem of the more extended consumption of Canadian hardwoods in the production of furniture is coming to the front. Not a few furniture retailers have from time to time made representations urging Canadian manufacturers to do more to popularize their native woods, especially birch. Canada possesses more birch than any other species of hardwood, while maple stands second in the list. According to the latest returns available, which cover the year 1918, the total production of hardwoods in the Dominion was 201,667 M. feet. Of this the greatest cut was birch, which constituted 76,165 M. feet b.m. Then came maple with 47,884 M. feet. Other species of considerably less quantities were ash, elm, basswood, etc.

The North American Furniture Co., Limited, of Owen Sound, one of the aggressive organizations in the furniture arena, are devoting attention to the manufacture of furniture and chairs of Canadian birch, and has been particularly successful in treating them with a walnut finish, to which they have given the name of "Chrome Walnut." The trade mark, "Chrome Walnut," has been registered and samples of the "Chrome Walnut" finish, which have been sent out, reveal a pleasing appearance. The finish is remarkable for its beauty and attractiveness.

The company say they find that birch is an excellent cabinet wood, capable of being worked up in practically any design in which genuine walnut is used. Furniture made in this "Chrome Walnut" finish is not sold as imitation walnut, but as birch, and the words "Chrome Walnut" apply only to the finish.

The North American Furniture Co. declare that in actual wear birch will stand up equally well with American black walnut, and when properly finished, it has just as handsome an appearance. There is no doubt if this birch was imported from some distant countries, it would be regarded as one of the precious woods. "We think," concludes D. E. Macintyre, vice-president of the company, "that every effort should be made to use more birch to the exclusion of the imported American woods, especially at this time when there is an adverse trade balance between Canada and the United States."

The Great Problem—Grow More Wood

"Three-fifths of the originial supply of timber in the United States is gone and every year we are taking out of our forests four times the amount of wood that we are growing in them. Moreover, the availability of the remaining timber is rapidly becoming less. Half of the remaining timber of continental United States is in the three States bordering the Pacific Ocean. And the true index of timber depletion is not the quantity that is left but its availability.

"'The real cause of our timber depletion is idle forest land. The area of idle or largely idle land is being increased by form three to four million acres annually as the cutting and burning of forests continue. The enormous area of forest land in the United States not required for any other economic use, estimated at four hudred sixty-three million acres, would provide an ample supply of wood if it were kept productive. Depletion has resulted, not from using our timber resources, but from failure to use our timber-growing land.

"'The answer to the forestry problem of the United States is not to use less wood but to grow more—to put our idle acres of burned and logged-off timber land at work growing trees. Three-fourths of the problem lies in preventing forest fires. But it does require an aggressive national policy of reforestation. It require concerted action by the national and state governments to do the thing which must be done by public agencies. It requires the active participation of the private forest owner. It requires a clear definition of public and private responsibilities as to timber-growing land, with an equitable showing of the cost. There is no phase of our whole problem of an assured and perpetual supply of timber that can not be met by simple and obvious measures once the constructive effort and capacity for organized co-operation of the American people are put behind them."—Colonel W. B. Greeley, United State Forester.

Another Stimulus to Building Houses

Municipal councils in the important centres of the Dominion have been continually confronted throughout the present year with the vexatious problem of providing adequate housing to accommodate the steadily growing populations. Various expedients have been undertaken in order to overcome this difficulty but so far no one has proved a satisfactory solution. Perhaps in no city has the housing situation been more acute than in Toronto, but municipal endeavor in providing relief has been of comparatively insignificant effect. The latest proposal on the matter suggests the exemption from taxation of all new houses for a period of three years. The inference is that, relieved from the burden of taxation for this period, there will be a greater stimulus given to the erection of houses, and the situation partially relieved.

Making Good Shingles from Stumps

Oscar Newstream and F. J. Sprague, partners, are operating about twenty miles from Seattle, Wash., a tiny shingle mill which needs but four men to run it. They have working on the logged-off land about the mill from six to eight men who cut the shingle bolts. Big wagons haul their product into Duvall, where it finds a ready market.

Newstream owns 30 acres upon which the mill is situated and Sprague owns an adjoining 20. From these and other tracts adjoining they have drawn their bolts for months. When the bolts from their immediate vicinity are exhausted the partners will probably move the mill to the timber instead of the timber to the mill as is the case with the big companies. The smallness and portability of the machinery makes this profitable.

The establishment of the little mill is a pioneering achievement. While Sprague and Newstream are cutting bolts, they are also clearing their lands and that of other "stump" farmers, and in their spare hours they burn and slash and seed on their little ranches. Practically all of the men employed by the mill are owners of 10 and 20 acre tracts in ifs vicinity, and the little industry serves to bring them ready money during the period that must elapse in which they can bring their tracts to the producing stage.

This is the third time these lands have been gone over. First came the lumberman who took out the biggest and finest timber. They scorned trees with twisted grain and cut high to avoid the bulge at the base of the trees. Many gigantic trees were left standing. Some years later, when cedar had become less abundant, the lands were gone over again and everything that was merchantable was taken out. Today lumbermen are taking cedar they would not look at years ago. Trees are cut close to the ground. The entire logging industry has undergone a change.

"And I don't doubt for a moment," said F. J. Sprague, one of the owners of the mill, "'that ten years from now these tracts will be gone over again for what we leave."

This prediction is borne out by the status of the shingle industry at this time. The sources of down logs are practically extinct. Only the standing timber remain, and the cedar trees in this, which used to be left, are now being taken out with the fir, and as there are but few cedars in comparison with the firs, the operation is a costly one.

The number of "backwoods" sawmills, as they are called, are bound to increase as the cedar sources are exhausted near the big markets. Not only the cedar but the fir and other stumps are coming to have a value and many men are finding it profitable to cut cordwood from stumps and fallen logs on logged off land adjacent to Seattle and other cities.

B. C. Sawmills Are Closing Down

A recent despatch from New Westminster, B.C., says that the Bucklin Lumber Co. has closed down its sawmill for an indefinite period, but with the expectation of reopening in January or February. This action is in line with predictions made at a recent conference of lumbermen, when it was intimated that most, if not all, of the mills would either close or reduce their output. The Canadian Western Lumber Company, it is understood, has already commenced curtailment, and the Brunette Mills, while still running at full capacity, may either close or curtail in the near future if the market remains in its present unsatisfactory state.

Several mills in the Vancouver district have closed down, and on the other side of the line it is said that half the mills have suspended operations.

"Cash and Carry" Plan in Lumber Line

J. S. N. Farquhar is the secretary of the Southeast Missouri Retail Lumber Dealers' Association and conducts a successful business at Fredericktown, Mo. He has inaugurated a novel plan to eliminate the credit trade and declares that the method—"Cash and Carry"—is working out satisfactorily. Mr. Farquhar asserts that under no circumstances would he go back to the old system of doing business. He believes in the benefit of newspaper advertising and when he struck out on original lines he inserted the following in a prominent space in the press: "Beginning Sept. 1, 1920, we will discontinue delivering and also will sell for cash only. This means to one and all, so please do not ask for credit. We positively will not credit anyone, for we are going to hew to the line and will treat everybody alike,

Cash & Carry Lumber Store

5 PER CENT DISCOUNT ON EVERY ITEM IN STOCK

Beginning September 1st, 1920, we will discontinue delivering and also will sell for CASH ONLY. This means to one and all, so please do not ask for credit. We positively will not credit any one for we are going to hew to the line and will treat every body alike, giving all a Square Deal.

PLEASE DO NOT ASK FOR CREDIT, THIS MEANS YOU.

FARQUHAR LUMBER & SUPPLY CO.

Per J. S. N. FARQUHAR, Pres. and Mgr.

Advertisement Published by the Farquhar Lumber & Supply Co.

giving all a square deal." The advertisement also announced a discount of 5 per cent. on every item in stock.

Many concerns are following the course of the Fredericktown man with interest. A few days ago he received an appreciative letter from the manager of an Arkansas lumber yard approving the "Cash and Carry" idea. The letter read:

"For some time I have been of the opinion that a cash and carry plan can be made to succeed.

"Personally, if I were the owner of one lumber yard, I think I could manage to take the capital which I have invested, convert my business into a 'cash and carry business,' buy another lumber yard, and maintain the two yards with the investment which I had formerly had at the one yard.

"I think this is true because I believe it to be a fact that in our section of the country the average retail lumberman has as much invested in his accounts receivable as he has in his merchandise, personal property and real estate.

"For my part, I shall be one of many who will watch the results of your experiment if you will allow us to do so, with intense interest.

"In closing, I hope and pray that your experiment will be highly successful; that your example will be emulated by the rank and file of the industry. I hope that the great day will come when we can all hold up the hand of J. S. N. Farquhar and proclaim to the world that here is the man who did more for the industry than any other man of recent years."

In acknowledging receipt of the communication, Mr. Farquhar said:

"I consider the credit business of the retail lumber dealers the greatest menace of the industry, and a tremendous overhead item that can be eliminated, thereby saving thousands of dollars to the lumber consuming public, by the discontinuance of delivery which is often very wasteful, no loss in accounts, no interest on borrowed money to carry accounts, and the good time now lost on collections, put to bigger volume of sales.

"For your information will say that so far the cash and carry experiment has worked like a charm with us. I honestly believe it will be a success, and I am positive it can be made a success if all the retailers will just make up their minds they can turn their business into a cash and carry one, with the net profits in the bank every night."

Emphasizes Importance of Shipping Interest

The Link-Belt Co., Limited, of Chicago, recently issued in booklet form a copy of the splendid address which was delivered by Mr. Chas. Piez, president of the Link-Belt Company and former director-general of the Emergency Fleet Corporation. This was a most instructive and timely contribution at the banquet of the National Marine League, Chicago, on October 19th.

Mr. Piez touched upon the importance and far-reaching effect of an American merchant marine, and said the time had come for American ships to work for the development of American trade as the railways of the country work for the development of their own terminal points and declared that they did not want the delivery of American goods to foreign customers to rest in the hand of foreign commercial rivals.

Mr. Piez also pointed out that it was essential until U.S. shipbuilders gain adequate experience, establish proper foreign connections and learn to co-operate with one another, that the direction of their foreign shipping policies should remain under the control of the shipping boards.

Found Western Stocks Quite Heavy

J. M. Donovan, of Toronto, returned recently from spending several weeks among the mills in British Columbia. He reports that in the centres which he visited there are large stocks on hand and that some plants closed down because the workers refused to take a 10 per cent. decrease in wages. The manufacturers contend that they could not pay the present high scale and sell lumber at the diminishing prices which characterize the market today. The men refused to accept the cut and consequently the mills ceased operating, claiming that they could not do so profitably.

The lumber industry on the Pacific Coast, according to Mr. Donovan, has been hit pretty hard owing to the falling off of United States requisitions and the absence of any large demand for stock from the prairies.

Mr. Donovan has been appointed eastern representative of the White Spruce Lumber Co., of Fernie, B.C., who turn out about 25,000,000 feet a year of white spruce; the Boulder Lumber Co., of Boulder, B.C., who produce Idaho white pine, mountain hemlock and mountain cedar to the extent of about 20,000,000 feet a year, and the Underhill Lumber Co., wholesale lumbermen, of Vancouver, B.C. Mr. Donovan will look after the interests of these three firms in Ontario and the east.

Serious Problems Confronting Lumbermen

Baker, Fentress & Co., bankers for lumbermen, Chicago, recently asked 2,854 banks located in the timber states in Western territory (a) what in their judgment were the most serious problems confronting the lumber industry at the present time; also (b) what they thought of the future outlook.

The point of view of the bankers in the lumber manufacturing territory as expressed in answer to the first question can be summarized as follows:

(1) Inadequate transportation which has seriously interfered with the delivery of lumber and the making of collections.

(2) Cancellation of orders due to non-delivery and the expectation of lower prices which has resulted in the piling up of working capital in lumber piles.

(3) Requests for an extension of credit from nearly all lumber manufacturers and in a majority of cases a request for increased line of credit during a time when it is almost impossible to comply because of similar increased demands from every other line of business and industry.

(4) The ability of the majority of lumber manufacturers to handle their financial affairs on a rising market, and the inability of many lumber manufacturers to meet the situation on a declining market without calling on the banks for extra financial assistance.

(5) The tendency of the smaller operator to throw all his stock on the market when prices have started on the decline, involving sooner or later other manufacturers and eventually resulting in a chaotic condition in the lumber market, with which cumulative effect the larger operators must reckon.

Answering the second question on future outlook:

(a) The effect of the high railroad rates on orders placed in the lumber manufacturing territory is problematical.

(b) A temporary break in retail and wholesale prices in lumber ready for delivery is to expected. Future prices will be regulated by the future cost of labor, production, etc.

A summary of a large volume of answers would indicate that the bankers consider the fundamentals underlying the lumber market as sound, but point out the necessity for the lumber business, like other industries, to protect itself by having more working capital. This work was started in June and expresses the bankers' point of view as gained during the past few months which have witnessed the break in lumber prices.

Irish Lumberman Visits Canadian Trade

John Pollock, of Lytle & Pollock, Limited, Belfast, Ireland, was a recent caller upon the lumber trade in Ottawa, Montreal and Toronto. He was paying a visit to Canada for the benefit of his health and the outing was also in the nature of a holiday. Mr. Pollock, however, took occasion to pay his respects to representative lumbermen in the various cities and was given a cordial welcome. It was his first sojourn in Canadian cities and he was much impressed with the progress and stability of the Dominion.

Mr. Pollock's firm, of which he is president, has been in business in Belfast for nearly a century, and has worked up a large connection in hardwoods, supplying shipyards, contractors, industrial works and other large consumers.

Up to the time that Mr. Pollock had left Ireland, there had been no recession in trade, which had been fairly active during the past season. Like other cities, Belfast was, he stated, handicapped for housing accommodation and not nearly enough building was being carried on to meet the existing demand. Mr. Pollock added that Canadian white and red pine were highly regarded in Belfast. The former was much appreciated for its beauty, strength, durability and utility. A certain amount of Canadan birch in the log is also handled by Lytle & Pollock.

How To Make Good Mailing List

It is no child's play to make a complete mailing list and you will never get one that is complete by trying to make it from memory. It requires time, thought and a little ingenuity to get together a mailing list that includes every prospect in your trade territory.

Blank & Co., have one of the most complete mailing lists ever seen and the manager was good enough to relate some of the methods he used to compile it. He was with us on a trip from ——— to ———. He put on his list every name that appeared on the rural route mail boxes passed on this trip. These names he could check up on his return to his office and it was very seeldom that he did not find some new names every trip he made to the country.

This was but one of the methods employed. Another, that produced good results, was to ask every customer who came to the office, whether or not they were receiving his literature and other advertising regularly and if not, he would take their name and address and add it to his list.

Another means of securing names was a blank form enclosed with his advertising asking the reader to send the name and address of his neighbors. This method has proven very effective and the manager has been able to add hundreds of names to his list in this manner.

Ask every man you talk to whether or not he is receiving your announcements and get as many new names as you can in this way. Every time you drive through the country, notice the names on the mail boxes and see if you cannot get additions to your list from this source. A mailing list, to be effective, should be added to right along.

Horoscope of Lumbering Activities

The last issue of the Labor Gazette of Ottawa contains the following interesting review of lumber activities in Canada: Charlottetown reported quiet conditions in the lumbering industry during September. At St. John the saw and shingle mills ran steadily. The sawmills in the district of Fredericton ran to capacity. Lumber workers were in demand at Bathurst. Round Quebec the sawmills were still in full swing on the season's cut, and men were being sent into the bush to prepare for winter operations. The saw and shingle mills and tie camps at Sherbrooke had a busy month. At Ottawa and Hull several machines in one mill were closed down on account of shortage of water power, while at another about a quarter of the men were laid off owing to difficulty in getting logs; generally, the saw and shingle mills were busy all month; men were in demand for bush operations. Peterborough reported a demand for men for the lumber camps; the drives on the river still continued and the sawmills were very busy. Timmins reported a shortage of bushmen, and at Pembroke bush and mill workers were in demand. At Owen Sound the sawmills were active, shingle mills worked part time, tie mills were quiet, and lumber camps were not very active, but were organizing for the winter's work. North Bay reported a demand for sawmill hands and bush men along the North Ontario Railway. At Cobalt bush men were in demand in the pulpwood work, causing some shortage in other camps. Sault Ste. Marie reported a strong demand in the outlying district for bush men, men being brought in from outside points; the lumber yards and sawmills were also very busy. Fort William and Port Arthur reported a constant demand for mill workers from the surrounding district, with an increasing demand for bushmen. Winnipeg reported a demand from northern Manitoba and Saskatchewan for bush men. At Prince Albert one mill suspended operations owing to the scarcity of men. A demand for men for the bush and sawmills in Alberta was reported from Calgary and Edmonton. At Fernie there were a considerable number of idle days in the mills owing to unsettled conditions in the lumber market, bad weather, and the diversion of labor to the prairie harvest fields; some of the smaller mills closed down. Cranbrook also reported a shortage of men for the sawmills. At Nelson new sawmills were opening up, but a shortage of cars hampered work to some extent. Lumber workers were busy at Grand Forks. Vancouver reported the saw and shingle mills and lumbering as generally busy. The mills at New Westminster were also busy; a shortage of cars led to the temporary closing of mills in Eburne district. At Prince Rupert the lumber camps and saw and shingle mills were very busy and workers were in demand; loggers were still required for camps on Graham Island, Moresby Island and Surf Inlet. Victoria reported continued activity in all branches of the lumber industry, and at Nanaimo employment was good, the mills on Vancouver Island mostly working full time, but some uncertainty was felt as to future orders owing, it was said, to changes in the freight rates.

How to Tell Birch, Beech, and Maple Apart

Birch, beech, and maple are very similar in appearance, and have approximately the same weight. Hence it is comparatively easy to mistake one of them for the other. A method which anyone can use to distinguish them is suggested by the United States Forest Products Laboratory. The method makes use of the relative width of the pores and medullary rays in the three woods.

If the end grain of birch, beech, or maple is cut smooth with a sharp knife and examined with a hand lens, the pores will be seen as tiny holes distributed fairly evenly over the surface, and the medullary rays will appear as narrow lines of a different shade running at right angles to the growth rings.

In beech some of the rays are very distinct even without a lens. The large rays are fully twice as wide as the largest pores.

In maple the rays are less distinct, and the largest are about the same width as the largest pores.

In birch the rays are very fine, invisible without a lens. The pores are several times larger than the rays, usually being visible to the unaided eye as minute holes on the end grain and as fine grooves on dressed faces of the board. The pores in birch are considerably larger than the pores in beech or maple.

Why Building Costs Are So High

The high cost of building is chiefly due to tremendous increases in labor costs, measured not alone in wage scales but in decreased efficiency, according to Joseph J. Koen, Jr., in the Magazine of Wall Street. Wages have risen (in N. Y.): bricklayers, 70c an hour to $1.25; carpenters, 62½c. to $1; painters, 50c. to $1; electricians, 50c. to $1; laborers, 17½c. to 75c.; plasterers, 68 3/4c. to $1.06; plumbers, 56c. to $1. Building is not as attractive as other trades because it is seasonally irregular, is exposed to the weather and is, generally speaking, dirty and fatiguing. Unless forced down by a general financial collapse, the writer does not anticipate any marked decline in building costs within ten years.

After Twenty Years Looking On

For twenty years two chess players met daily at Brown's Chop House, took their places, silently played their game, silently departed. For twenty years a third party sat by and silently looked on.

Then one of the two players failed to show up—for the first time in twenty years. After waiting a few minutes, his partner said to the onlooker, "I guess he isn't coming today. Will you play his men?" "Sorry," was the answer, "but I don't know the game."

He had followed every move for twenty years but he didn't know the game. He had watched the drama of king and castle for two decades without sensing a single undercurrent of strategy, speculating on a single motive, or anticipating a single coup.

He had displayed infinite patience in looking at the game, but he couldn't be bothered looking into it. He showed every sympton of life except its first symptom—curiosity.

He belonged to that listless army of passive observers who clutter up the side lines of business—men who look without seeing, listen without hearing, do without understanding.

Placed in an office—at a bench—he would remain twenty years ignorant of his neighbor's job, his superior's problems, his own significance. When the opportunity for advancement came, he would have to say, "Sorry, but I don't know the game."—The Better Way.

Logging Operations up the Gatineau Valley

How Successful Jobber for Large Lumber Firm in Quebec Province Gets Out Timber, Builds Roads and Accommodates the Men—The Cut-over Areas

*By W. G. Wright, H. M. Hughson and F. H. Horton

It was the original intention of our party to study operations at a shanty ran directly by Gilmour & Hughson, Limited, Hull, P. Q. one of the bigger lumber firms operating in the Gatineau Valley, but as the nearest shanty was some 60 miles from the railhead, and, as the roads were not in condition for either wagon or sleigh, we were given the opportunity to go into a camp, about seven miles from the Gatineau Valley branch of the Canadian Pacific Railway, run by one of Gilmour & Hughson's most successful jobbers, M. Miljour.

This jobber's contract resulted from Gilmour & Hughson's decision to cut 41,000 logs, reported available by their cruiser, in the Township of Alleyn, east of Kanakagamo Lake and north of the Pickanock River, and in Ranges 1 and 11 in the Township of Dorian.

Toting teams at sub-depot of Gilmour & Hughson, Hull, Que.

The contract calls for delivery of the logs in the Gatieau at $13.00 per M.F.B.M. This was on the whole, a fair price, though it was expected that part of the tract would be operated at a very small profit or even at a loss. The cutting of 26,000 pieces was sub-let to other jobbers in the southwestern and northern portions of the area, Miljour reserving for his own operation the difficult part of the contract, about 12 square miles in Ranges VII and VIII in Alleyn, and Range 1 in Dorian.

The particular tract studied lies at the head of a small stream running south-east to the Pickanock River and included part of the watershed between this stream and Cherry Creek, into which latter stream the sub-contractor to the north was to deliver his logs. There is an almost regular alternation of low ridges and bottoms; this influences the logging methods. Moist bottoms, usually containing streams and swamps, constitute mainly the site of the hauling roads All skidways are placed at the bottom of slopes so that decking with horses being necessary.

The ridges are occupied by hardwoods which give way to conifers in the bottoms. There are two main hardwood types. Of the one, that on the higher land in the direction of Cherry Creek, beech and oak make up respectively 35 per cent. and 25 per cent. the remainder being maple, yellow birch, poplar, scattered pine and white birch. The reproduction is beech, maple and some balsam. The other type, covering the greater part of the hardwood area, differs in that yellow birch and maple predominate, each about 45 per cent.; the remaining 10 per cent. being small beech, ironwood, poplar and spruce. The reproduction is the same as in the previous type.

In the coniferous type occupying the bottoms two stories may be recognized. The upper is generally white pine and birch, with an under story of balsam, maple, spruce and birch in widely varying proportions. There is an almost entire absense of white pine reproduction on the tract even in fairly open stands; at any rate it was not visible above the snow. As provided in the contract, the area was logged only for say timber, although there is some balsam and spruce suitable for pulpwood, running one to two cords per acre. There is practically no poplar suitable for that purpose.

The logs cut were sound, although about 10 per cent. of the white pine was left standing on account of rot. On the whole the timber was well grown and straight giving on the average a merchantable length of 50 feet in a 65 to 70-foot tree. Among the denser stands in some of the bottoms the top left might average 15 feet in an 80-foot tree, whereas in open stands on the slopes many tops would run 30 feet in a 65-foot tree. From measurements taken on sample areas, the maximum and average stands were estimated at 21 M. and 6 M. F.B.M. The average taper was found to be 1.4 inches per 16-foot log.

Location of Shanty Close to Tote Road.

It was desired to locate the camp on the area to be logged close to an old tote road, which would require only a small expenditure to be made passable. No streams or lake were found available in the vicinity, but good and sufficient water was found at a depth of 4 feet on a well drained and level piece of ground on the edge of the tract and as one of the main hauling roads. This decided the actual site of the shanty .

Theoretically, it would have been better to locate the camp in the centre of the area to be logged, as this was about 3 or 4 miles square, but the site chosen was the only one suitable within a reasonable distance of the timber and the tote road. The expenditure necessary to extend the road to a more central position would not have been repaid by the time saved in going to and from work. Most of the timber was within one and one-half or two miles from the shanty. On Miljour's particular operation the merchantable timber was very scattered, the whole tract of 12 square miles yielding less than 1,000,000 F.B.M.

Very little work was required on the tote road. Only one bridge was built and that consisted of two 12-foot stringers thrown across a small stream and covered with corduroy.

The shanty occupied about three-quarters of an acre. This area was cleared of standing timber and any trees in the vicinity liable to be overthrown onto any of the buildings were felled also.

The following buildings were erected to accomodate about 30 men and 10 teams:

Building	Inside Measurements
Cook camp and office combined	20′ by 20′ & 20′ by 12′
Meat house	10′ " 8′
Sleep camp	24′ " 20′
Two stables	26′ " 24′ & 26′ by 16′
Forage barn	26′ " 26′
Two latrines	5′ " 4′

About 23,000 F.B.M. of logs was used in construction drawn from

Splash dam built by Gilmour & Hughson

dead and otherwise unmerchantable timber felled on the clearing or in the immediate vicinity. Three thousand F.B.M. of lumber was hauled in and used for flooring, roofing, doors, partitions and bunks and other furniture. Roofs were covered with the customary roofing paper. As the buildings were low, horses were not required in erection.

The organization of the shanty crew of 28 was as follows:—1 foreman, 32-man felling crews, each of which was followed by a skidding crew consisting of 2 trail cutters, 1 team and teamster and 1

*Attending Forestry Department, University of Toronto.

roller. In addition to these, there was a spare gang consisting of two men and one teamster with team, who were employed to assist any of the log makers, teamsters or rollers, who got behind with their work owing to difficult working conditions or for other reasons. Also four men were employed the whole time on the construction of hauling roads. The wives of two of the crew acted as cooks and accommodation was provided for them and their husbands in the cook camp. Chores were done by one of the crew who left work early in the afternoon for this purpose.

Each member of the crew, except the cooks, received the same wage, namely $60.00 per month, including board. This is equivalent

Log slide on Gilmour and Hughson's limits

to $2.30 per man for each of the 26 working days in the month. Time off due to inclement weather was not paid for. The actual working day was estimated at $3.17.

There was no special organization for toting, as the opportunity is taken for drawing necessary supplies when teams are making trips into the supply centre for blacksmith work. The outward trip may be charged up to this, and the day for the return trip to toting. The supply centre on the railway is about 12 miles from the shanty.

The usual wagon load is about 1100 pounds. Hauling this costs, on the above basis, a day's time of one team and teamster, $6.77, so that the cost of toting by wagon is about 60 cents per 100 pounds. The load for a jumper, used on snow roads, is about 1800 pounds. The cost for toting on snow is, therefore, about 38 cents per 100 pounds.

Location of Hauling Roads.

While the construction of the camp was going on, one-half of the foreman's time was put on locating roads and skidways. Hauling roads followed as far as possible the swamps and stream beds, which gave egress for all parts of the tract to the stream which forms the main haul route to the landing on Two Mile Lake, an expansion of the Pickanock.

For country where streams and sloughs are not relied on for hauling roads, mileage for a given area depends on the location of the timber and the maximum skidding distance deemed profitable. On the other hand, in country such as Gatineau Valley, the mileage of haul roads depends on the location of the timber and the available streams and sloughs. Here the distance skidded might have to be lengthened beyond what would otherwise be the profitable limit.

In this particular operation about 8 miles of hauling road were required for the area of about 12 square miles, including two miles from the edge of the tract to the landing.

Log Making and the Cutters.

The foreman of the camp directs the felling crews as to the particular blocks of timber they are to cut and shows the cutters the corresponding skidway site.

The crew consists of head sawyer and helper. The head sawyer selects the tree to be cut which is then notchd and felled. He marks of the length as prescribed by the contract which calls for 16½-foot and 13½-foot logs for all other timber: the longer length is taken wherever possible. Putting on the company's bark mark and limbing up follows. The two men then buck up the tree. A 3½-pound singled-bitted axe was used. Handles were usually made by the contractor himself, his preference for material being ironwood. A whetstone is usually carried by each man. A 5½-foot crosscut saw was customarily employed, the usual type for conifers, having four cutters to one double raker, and with large dust spaces. The sawyers do their own filing. Each driving crew is equipped with two 7-inch iron wedges notched on one face and joined together by a 3-foot leather thong. For driving these a 4-pound sledge is used. For convenience in carrying, the sledge-handle is passed through a slit in the afore mentioned thong. The measuring stick is a peeled hardwood sapling 8 feet 3 inches long with a notch 1 foot from either end. This arrangement allows it's use for either 13-foot, 14-foot or 16-foot logs, the additional 3 inches giving the necessary overrun.

The last date on which a count was taken was December 15th; up to and including that date 8225 logs had been cut. This at an average log content of 65 F.B.M., is equivalent to 542,850 F.B.M. This cut occupied 103 crew days so that the average daily cut per crew is 80 logs or about 5275 F.B.M.

In calculating the cost of the daily cut, two-fifths of the time of the two extra men in the spare gang may be charged to this operation: this amounts to $2.54 and one-third of this 85 cents is to be added to the daily cost of each log-making crew.

Daily cost of log-making crew:

2 sawyers at $3.17.	$6.34
Proportion of cost or spare gang to be charged to be to each log-making crew	.85
	$7.19

Daily cut is 5275 F.B.M. at a cost of $7.19. This is equivalent to a cost for log-making of $1.36 per F.B.M.

Skidding and Trailing Operations.

While skidding is being completed at one skidway the trail cutters follow the sawyers to the next block of timber. First of all they clear the skidway site. Skids are then built into position so as to form a level platform for the logs, and a small log is notched into the outer end of the skids crossways to form a stop. The time taken to prepare a skidway was very variable owing to the differing nature of the ground and the occasional need of a skidding team, but the average time taken may be estimated at about one hour for two men. When this work is finished the trail cutters start on the new trails.

As the skidways are located at the bottoms of slopes, practically all trails are down hill. There were one or two main trails, each with numerous branches. Only under exceptional circumstances was any skidding done from a greater distance than 400 feet. The amount of underbrush and windfall was small, so that the cost of trail construction was low. The length of trail per acre was very variable but in the average stand was found to run about 750 feet; cutting this occupied about one day for two men.

The teamster and roller work in conjunction. It is customary to use a two-horse team, though sometimes, where distances are short and obstructions plentiful, one horse may be used for a short time.

The general run of the logs being small, the snaking chain with choker is used in preference to tongs, so that two logs may be brought in at a time. The snaking chain is attached to the team by means of a grab hook and clevice on the spreader or doubletree, as the case may be. As the skidway grows in height, skids are required for piling, and the roller may be assisted when necessary by

Another slide on Gilmour & Hughson's limits

the teamster or one of the trail cutters. The small size of the logs and the abundance of skidways render a decking team unnecessary. The roller stamps the company's mark four or five times on both ends of each log. The average skidway contained about 90 logs, which were to remain there until the hauling commenced.

The same figures used in calculating the cost of logmaking may be employed in arriving at the cost of skidding, the balance of the time of the spare gang being charged to this operation.

Scaling is done when the logs are assembled on the skidway. The company's culler and one assistant do the scaling for the six or seven camps in the southern limits. They make periodical visits

for this purpose and the contractors are advanced funds by the company on the basis of the cut.

The culler has a steel scale, tape line, lumber-lead pencil and a tally board. His assistant has a steel scale and a lumber-lead. They work on opposite sides of the skidway. Measurements are taken inside the bark and the smaller diameter is taken to obtain the scale. The culler makes a stroke on his board in the space allotted to the diameter, length and species to which the log belongs. When the skidway is completed both culler and assistant count the logs to see that none are overlooked. The scale is figured out in the office. Very little defective timber was made into logs in this operation so that practically no culling for defect was necessary; allowances are made for defect when they appear. The log may be culled in extreme cases. An average of 130,000 F.B.M. can be scaled per day, but, as considerable time is spent going from camp to camp and as a team is allotted to the culler for his sole use during the season, the cost for scaling works out at about 20 cents per M. The Quebec Rule is the statute scale for the Province and is found to agree fairly well with the mill cut.

As already explained. the jobber's contract with Gilmour & Hughson called for the delivery of 41,000 logs in the Gatineau River. He sub-let of the contract, retaining for his own operation the cutting of 15,000 logs, equivalent, at 66 F.B.M. per log, to 990.000 F.B.M.

With a total cut of 990,000 F.B.M., the cost per F.B.M. for delivery at the landing on the Pickanock River was $11.45. The jobber did not intend to handle the drive himself; he had let a sub-contract, at $1.00 per F.B.M. for the driving logs from the landing on the Pickanock to the junction of that river and the Gatineau, a distance of 20

Cook camp and office on Gilmour & Hughson's operations

miles. On the basis of the above figures, the cost of delivering the logs in the Gatineau River would be $12.45 per F.B.M. Under his contract the jobber was to be paid $13.00 per F.B.M., so that his profit on the operation would be 55 cents per F.B.M. This however, does not take into account any interest charges on the jobber's investment.

Condition in Which the Forest is Left.

It is stated earlier in the report, that about ten per cent. of the pine above merchantable size was left standing on account of rot. These pine are capable of bearing seed, but generally speaking, owing to their being very much scattered, and owing to the presence of competing hardwoods, favored by site and prolific deeding qualities, there is little hope of pine reproduction being established in sufficient quantity to create a commercial stand. The opening up of the denser stands in some parts of the bottoms may give rise to a new generation of pine in competition with the spruce balsam and hardwoods on the same acres, but the encroachment of the hardwoods on the pine bearing lands is evidently assured.

From the standpoint of fire the slash can scarcely be considered to constitute a menace. Over the greater part of the area, tops are widely scattered and are separated by hardwoods and in many places by a dense hardwood undergrowth. Lightning is about the only source from which a fire might be started within the cut over area itself, as it is isolated from railways and settlements, and offers little or no inducement to campers.

A stream to be characterized as driveable must be one that will float the logs made in the district tributary to it. The work done to clear a stream for driving depends entirely on the topography, size of stream and logs to be driven. Large boulders must be blasted out, underbrush and fallen trees removed; in small streams relatively more of this kind of work has to be done. In a great many of these streams it is necessary to construct splash dams and slides, so that portions of the tream too rocky or too hollow, may be negotiated with the minimum of expense. The number of splash dams constructed depends on the nature of the stream. They are usually placed at the foot of a rapid, where the stream is narrow and provides a solid foundation, and where the water stored up will drown out the rapid above. Other improvements necessary are glances; these are located at sharp bends in a stream in order to keep the logs in the proper channel and so prevent side jams. Usually glances are merely booms, but at sharp bends in a strong stream crib work is often necessary.

Either Gilmour and Hughson or their contractor handle the drive on the small streams as far as their junction with the Gatineau. There the logs are taken over by the Gatineau Boom Company, which drives all logs on the Gatineau River from River Desert to the mouth of the Gatineau at Hull. The Boom Company makes a uniform charge of 50 cents for the whole distance of 80 miles, with a proportionate reduction when they take over logs at any intermediate point on the river.

Turn Out 60,000 Cross-Arms Every Year

The Wm. Shirton plant at Dunnville was visited by the delegates at the recent district meeting and a tour was made of the planing mill and yards which are well laid out with ample storage sheds.—dry kilns and excellent shipping facilities. The industry is an old-established one and employs from 15 to 20 men the year round. Wm. Shirton, the founder of the business, died about 12 years ago, and it has since been ably conducted by his son, K. J. Shirton, who is one of the most enthusiastic members of the Ontario Retail Lumber Dealers' Association.

The district in and around Dunnville is a great natural gas one, and some five years ago Mr. Shirton sank a gas well. The depth is 800 feet. A 6-inch pipe goes down 500 feet into a pocket of 250 feet depth. Until the latter part of 1919 natural gas was used for driving the equipment of the mill but now a 25 h.p. Westinghouse motor is employed and the gas engine is kept as an auxiliary in case anything should go wrong with the Hydro-electric power. Natural gas, however, is used for heating the building and offices of the firm.

Mr. Shirton has a large contract with telegraph and telephone companies for the supplying of cross-arms, which are made from B. C. dimension spruce.

In regard to cross-arms for telegraph and telephone poles, Mr. Shirton says that his company uses B. C. fir almost exclusively. Roughly speaking, the size that they employ to the greatest extent is 3¼ x 4¼ finish measurements, although they manufacture a small quantity of 3 x 4 and occasionally 3¾ x 4⅛.

The Wm. Shirton Co. will furnish about 60,000 cross-arms this season and state that this business for 1920 has not been in excess of the normal output.

Continuing, Mr. Shirton says: We have been in the cross-arm business for about fifteen years and are quite well established, although it has been rather a slow process to build up a trade in this particular line. We do not hesitate to state that B. C. fir is, in our opinion, the most suitable wood to use for the purpose, although long leaf Yellow Pine is a very close second. We believe, moreover, that all other things being equal we should give our Canadian firms this business and are resolved to adhere to the former wood as long as it is procurable at anywhere near the price of the American product. Norway pine, although light in weight as compared to Georgia pine, is very often too knotty thereby impairing the strength. Otherwise this wood compares quite favorably with both fir and Georgia pine. Spruce and white pine can not be used to advantage for cross- arms, as the former, although light and strong, cannot withstand the elements, being subject to rot on exposure and the latter is altogether too expensive when bought as clear stock.

Costs Are Too High—Orders Too Few

Mr. J. W. Coburn, head of the new Ladysmith Lumber and Shingle Company, recently stated that he looked for the most serious time in the next four or five months in his experience of lumbering.

"We cannot close our eyes to the fact that there is no demand at the present time," he said, and added that "it would be the essence of folly to continue to manufacture lumber while the prices are at such a low level."

Within the past month conditions in the lumbering industry have assumed serious proportions. It is now said to be a question of how many mills will close down, not only on the mainland, but also on Vancouver Island. There the conditions are about the same as they are in Vancouver and district. Many of the mills, both shingle and lumber, have shut down and others are on the verge of doing so. The reasons are—the higher cost of production, the paucity of orders and the low price to which lumber and shingles have dropped of late.

If a swelled head hurt as much as a sore thumb—wouldn't there be some headaches?

Personal Paragraphs of Interest

C. J. Brooks of Rose-McLaurin, Limited, Toronto, has returned from an extended business trip throughout the Maritime provinces.

Conkey & Murphy, manufacturers of lumber, ties, etc., Latchford, Ont., have dissolved partnership. M. T. Conkey has retired from the business owing to ill health. A. J. Murphy will continue operations on an active scale.

Former Controller Sam McBride, of Toronto, wholesale lumberman, who last year was a candidate for the Mayoralty of Toronto, has announced his intention of again being an aspirant for that office and has already started his campaign.

The many friends of W. J. MacBeth, lumberman, 60 Brock Ave., Toronto, are extending sympathy to him in the loss of his wife who passed away recently after a rather long illness. Besides her husband, Mrs. MacBeth leaves three sons and two daughters to mourn her death.

F. N. Waldie, of Toronto, president of the Victoria Harbor Lumber Co., accompanied by his wife and daughter, will leave shortly for Bermuda, where they will spend several months. Mr. Waldie has not been in good health for some time and has been enjoined by his physicians to take a long rest. His numerous friends hope that the trip will greatly benefit him and that he may return fully restored to strength.

R. S. Whiting, for the past four years architectural engineer in charge of the Architectural and Building Code Service of the National Lumber Manufacturers' Association, Chicago, has severed his connection with that organization, and will take a much needed vacation before resuming active work. Mr. Whiting says that he has made no definite future plans but will doubtless continue some activity in the lumber industry in which he enjoys a wide acquaintance.

Wm. J. Cashin died recently in Stratford, Ont., after an illness of several weeks. He was born in North Easthope and was prominently connected with the lumber industry in Algoma. He also owned and operated a mine in Colorado and was for some years in the real estate business in Toronto. Mr. Cashin, who was 68 years of age, was on several occasions nominated for federal parliamentary honors, but, owing to his business associations, declined to seek political office.

A number of lumbermen are on deer hunting expeditions and their friends expect on their return that they will be remembered with generous slices of venison. J. G. Cane, C. G. Anderson and Horace Boultbee, of Toronto, are with the Norman Hocken party at West River; Harold George and C. Schmidt of the R. Laidlaw Lumber Co.'s travelling staff, are at Pickerel, and W. C. Laidlaw, of Toronto, is with a party of friends in the Sudbury district. Gordon Richardson, of Tilbury, Ont., is on a similar expedition at Pickerel.

W. F. Beck, of the C. Beck Mfg. Co., Penetanguishene, Ont., who is one of the most widely known lumbermen in the Georgian Bay district, was recently married at Newmarket, Ontario, to Miss Bernice Cane, daughter of J. E. Cane of that town. The ceremony took place in St. Andrew's Church, in the presence of a large number of friends. After the nuptials a reception was held at the home of the bride. Mr. and Mrs. Beck left for a honeymoon to California and on their return will take up residence in Penetanguishene. Many friends in the lumber industry will extend congratulations and best wishes.

Edward Norton has opened an office at 39 Adelaide Street East, Toronto, as sales agent for several British Columbia manufacturers and is selling direct to the trade. He has had twenty-five years practical experience in all branches of the timber and lumber business in Oregon, Washington and British Columbia, and is thoroughly conversant with every operation from the logging end to the marketing of the finished product. Mr. Norton started with the North Pacific Lumber Co., at Portland, Oregon, in 1895. He was later with the Fraser Mills in British Columbia for several years and, for some time was buyer for wholesalers. Then he broke into the lumber game for himself as a manufacturer. During the war he was on the Inspection Board in connection with shipbuilding materials and the purchase of spruce and recently had charge of one of the mills of the Dominion Lumber Sales Co. Mr. Norton handles all lines of Pacific Coast stocks.

C. W. Wilkinson of the Union Lumber Co., Toronto, and Mrs. Wilkinson, who have been spending the past two months on a visit to England and France, returned home recently. The trip was largely one of pleasure and they visited several historic scenes on the battle-front. Mr. Wilkinson was in England at the time of the great coal strike, and says that labor in the Old Country is very unsettled and frequent disturbances have resulted in decreasing business in the lumber and timber line. Importers and timber merchants are, of course, doing some trade, but the volume is not as large as it was expected that it would be when so many housing propositions were got under way, and considering the great need for dwellings in all populous centres. Not a great deal of structural work has been undertaken so far this year, but it is hoped, that much more satisfactory progress will be made during 1921, for the situation is urgent. Mr. Wilkinson is accompanied to Canada by F. H. Huntington, of Liverpool, managing director of the Canadian Lumber Co. and also identified with the firm of Wm. H. Huntington & Sons. He will spend some weeks in Canada on business. Mr. Huntington was a member of the British Advisory Board at the time of the government control and regulation of timber operations and purchases during the war and rendered valuable service.

Southern Lumbermen Make Cut in Wages

At a meeting of the Georgia-Florida Sawmill Association, comprising the biggest operatives in the two states, held recently at Tampa, Fla., it was decided that, beginning November 8, the wages for common labor in the mills would be cut to $2.50 a day, and that wages for other classes of workers would be cut proportionately. This represents a reduction of approximately 25 per cent.

The operators gave out a statement to the effect that the lumber market had fallen off to such an extent that it was a case either of cutting wages or shutting down.

The happiest lumberman is the one who can see the sun when it isn't shining.

W. F. Beck, Penetanguishene, Ont.
Who was recently married and has gone south on wedding trip

B. F. Smith, East Florenceville, N. B.
Who was returned in the recent N. B. elections. He is a lumberman.

Edward Norton, Toronto.
Who has arrived from the Coast and sells for several B. C. sawmills.

Getting in Money from "Slow Pays"

A series of effective collection letters is being employed with a large measure of success by H. J. Baldwin & Son, Waverly, N.Y., in the matter of getting settlement of small acounts. The firm have been using the letters on patrons who are perfecty solvent but are careless or indifferent in the matter of remittances. The communications are worded in a way not to give offence or arouse animosity and at the same time are pointed and direct. They do not beat around the bush and each one has a personal heading. Copies of the series follow and will be found interesting and helpful in stirring up some customers who have become delinquent.

Letter No. 1.

Dear Mr.—

In these busy times we don't blame you very much for overlooking the little account on our books. You'll remember we billed you recently for shingles ordered in June.

We'd like mighty well to have your remittance—we'd like to clean this up by August 5. May we hear from you? Thank you.

Yours truly,

Letter No. 2.

Dear Mr.—

Here's a copy of a letter we wrote you a few days ago.

Courteous, isn't it? Reasonable? Don't you really think you ough to reply with a remittance?

We made a bargain with you. We've done our part. Won't you do yours?

We shall expect a remittance by return mail and the writer is so sure that it'll come that I'll thank you in advance.

Yours truly,

Letter No. 3

Dear Mr.—

We again call your attention to your account shown on attached statement.

Owing to the high cost of materials and the stringent terms of shippers we must follow our collections very close and get settlement promptly in order to finance our business.

We trust, therefore, that you will send us your settlement for this amount at this time.

Yours truly,

Letter No. 4.

Am I writing to the wrong man?

Our records show that you owe us $36.50. This is the fourth letter I've written you and I'm not discouraged yet.

The account has been explained to you. If our books are wrong we want to fix them. If they are right, we are sure you will want to pay this small amount.

Will you? By return mail? If it's not convenient now, tell us when you will remit. Thank you.

Yours truly,

Housing in Belgium and Britain

An intensive campaign for the construction of cheap homes has begun in Belgium by the National Organization for the Construction of Cheap Homes, which has a capital of 100,000,000 francs, or $20,000,000 (normal exchange), according to the Bureau of Foreign and Domestic Commerce. In Antwerp, 125 of these habitations have just been completed and this is merely a beginning. The city is arranging to procure the necessary space for the erection of 1000 other houses. Abaut 80 local organizations are already in process of formation for this same purpose.

According to a cable just received by the Chicago Daily News, London is embarking on a fresh campaign to raise about $150,000,000 for new houses. The London county council proposes to provide 29,000 dwellings to accommodate 145,000 persons. It is expected that 5,000 houses will be completed or nearly so within six months and that the whole number will be ready for occupancy within five years.

Not only London but municipalities throughout Great Britain are selling housing bonds. In the whole country 40,000 buildings are said to be in course of construction with a promise of 500,000 to come. In addition, private builders are now constructing 20,000 houses. Great Britain's half million houses will cost nearly the equivalent of two billion dollars. The demand for homes is enormous. It is said that 125,000 London ex-soldiers who served overseas are deferring marriage because they cannot be sure of getting even a single room, and 63,000 former service men in London with families of from two to eight children are herded into two rooms per family.

Agitation for Export of Quebec Wood

"It is certainly entirely within the rights of the Government to say what shall be done with the timber cut on its own lands, and it is not, in any way, over-reaching its powers when it requires it to be manufactured within the Dominion.

"Several American firms, who purchased timber licenses, did so with an eye to the future, looking forward to the time when they should either have exhausted their own supplies or when it would be more convenient or profitable for them to manufacture nearer their source of supply in Canada. Some of these companies, without any protest whatever, came into Canada and decided to build mills so as to be near their supply of raw material and to secure cheap water power. They have been manufacturing very successfully and sharing in the prosperity of the pulp and paper industry.

"Most of the agitation for bringing out Crown Lands wood to the United States has come from one company which has been manufacturing lumber for a number of years from their Canadian licensed timber holdings and who, before they started the agitation, made plans and commenced to build a mill in Canada. The American interests which have agitated for the free export of Crown Lands wood have entirely misrepresented the situation and have made statements which they must have known were not matters of fact. They have deliberately tried to stir up trouble between the two countries, and they will find that, as always, such methods will react unfavorably to those who use them.

Conditions Created by Public Negligence

Once upon a time a business man had many manufacturing establishments scattered all over the country. He made a great many different kinds of articles, and all these articles were made of wood. The articles were very well made and were very useful. The people bought them eagerly and paid high prices for them. The business prospered and the manufacturer of wood products became very rich. In fact, there were only two other men in the country richer than he, says Dr. C. D. Howe, Dean of Forestry, Toronto University in "Some Forestry Fables."

It will be seen that he was very careful and business-like in his methods, otherwise, he would not have made so much money. His factories were well organized; each workman was carefully trained to do his bit; he did it well and was paid according to the value of his service. Since the manufacturing establishments were so valuable and were such big money-earners they were well protected against loss by fire. In some places as in sawmills, bucket brigades were organized; in others like planing mills connections were made with high-pressure watermains; in paper mlls automatic alarms or automatic sprinkler system were installed. The more valuable property to be protected, the more the money expended in protection against fires.

This manufacturer got all his raw materials, out of which he made so much money by using thought and care and labor, from trees of various kinds that grew in a forest. He didn't own any trees; he had to buy them from another man, and that other man owned many, many acres of trees, in fact, most of the best trees of the country were in his possession.

Now, unfortunately, in sharp contrast to the successful manufacturer, the owner of the trees was rather slothful and unbusinesslike in his methods. He did not require efficiency or skill in his workmen and he paid them low wages. In the matter of fire protection, for example, we have already seen how the successful man managed that, but the owner of the source giving trees, on the other hand, would put a decrepit old man and a young boy in charge of a forest that contained trees worth $1,000,000. They, of course, were helpless when the fire came and the forest would burn. In fact, so many trees burned under this kind of management that the manufacturer found it increasingly difficult to get the raw materials for an increasing number of his products; some he had to seek at distances, others gave out entirely and had to be brought in from foreign countries. All this naturally helped to increase the cost of wood products. In fact, it increased very rapidly and the people cried out grievously against the high prices, but they themselves were the owners of the trees they allowed to burn. They cried out against conditions created by their own negligence.

In the long run in this world men get what they pay for either in thought, effort or money. The forests of Ontario will continue to be destroyed by fire until the thought, care and money put into their protection are commensurate with the value of the property involved.

Pulpwood and Its Varied Activities

Would Stop Export of Pulpwood

In a recent address before the Empire Club in Toronto, Hon. L. A. David, Provincial Secretary and Minister of Education for Quebec, severely criticized the policy which permitted of the exportation to the United States of Quebec's pulpwood to be manufactured into paper. Pulpwood thus exported, he said, became worth $75,000,000 annually under the industry of United States workmen. In this conversion of pulpwood into wealth on the other side of the border he estimated that there was a loss of $66,500,000 to Canada, of which amount the Canadian workmen would have received about $25,000,000 had the raw material remained in Canada and been manufactured into paper in Canadian mills.

Quebec, added Hon. Mr. David, had reached a degree of industrial stability attained by very few communities. Due to Quebec's just legislative enactments, beneficent to workmen and capitalists alike, the province had escaped industrial turmoil which had swept the world.

Development of Northern Pulpwood Areas

The talk in Quebec Province of great plans to develop the vast northern areas, together with renewed gossip about a railway to Hudson's Bay, has again stirred up the "On to the Bay" movement in Northern Ontario, particularly at Cochrane. It is understood that Quebec's new giant pulp and paper company is taking over the charter for the railway from Seven Islands to Hudson's Bay, with a branch line from the Lake St. John district to Quebec City. It is understood that the plans for the northern terminal are to locate it just opposite the Belcher Islands.

In development of its northern areas Quebec is now making and perfecting plans on a big scale. Just recently the Quebec Cabinet approved of the plans of the new C. P. R. branch, which is to extend north along the eastern shore of Lake Temiskaming. This branch will run from Kipawa, at the foot of the lake, where the Kipawa pulp plant is located. The Quebec Government is aiding the building of this line. It will open up a wonderful agricultural area and touch upon a valuable pulp area, which is believed will soon be developed.

Pulp and Paper Exports Steadily Grow

The quantity and value of pulp and paper commodities exported from Canada continues to increase month by month with persistent regularity. The latest available returns are those for the month of August, which show a total of $18,258,727. An outstanding feature of the increased exports is the very considerable increase in value of chemical pulp exported. For each of the past three months the value of exported chemically prepared pulp has been in excess of $6,000,000, over double the monthly average for 1919. The totals reported for August, 1920, as compared with August, 1919 are as follows.

Paper	$4,999,258	$8,746,817
Chemical pulp	2,873,186	6,702,644
Mechanical pulp	475,735	2,809,266
Totals	$8,348,179	$18,258,727

Total exports of pulp and paper for the 12 months ended August, 1920, not including pulpwood, amounted in value to $133,787,676. This is an increase of $36,813,613, or 38 per cent. over the value of exports for the 12 months ended August, 1919.

Timber Limits in Labrador are Vast

Recent surveys of Labrador, which have disclosed immense resources of timber suitable for pulp and paper manufacture, have led to a revival of efforts to bring about a determination of the boundary line between Newfoundland and the Canadian province of Quebec. This line has never been laid down by actual survey and its various definitions as given in documents issued at intervals in the last century and a half are so vague that government officials do not know just how much of Labrador belongs to Newfoundland and how much to Canada.

That Labrador is rich in many natural resources, including enormous waterpower, has long been known, but the practicability of utilizing its forests for paper-making was not demonstrated until the worldwide paper shortage led to exhaustive investigations of the territory. This resulted in applications by promoters to the Newfoundland Government for timber limits in Labrador. As these could not be acted upon until it was determined whether Newfoundland owned the land in question, representatives of this colony were sent to London late in the summer to discuss with eminent English counsel the preparation of a formal draft of Newfoundland's Labrador claims as opposed to those of Canada.

The coast of Labrador was annexed to Newfoundland in 1763. Then years later, owing to difficulties arising out of grants made to a number of persons under the French rule, it was changed to Canadian jurisdiction. In 1809 it was again transferred to Newfoundland and has since been attached to this colony.

The difficulty arises over different interpretations of the words "coast of Labrador." One view is that Newfoundland can claim only the coast between Blanc Sablon and Cape Chidley, with perhaps half a mile inland, and that the rest of Labrador belongs to Canada. As defined in the letters patent constituting the office of Governor of Newfoundland, the boundary was described as a line drawn between Blanc Sablon and Cape Chidley, which would pass through the ocean in certain sections and leave large areas of the coast to the westward of the line and therefore not under Newfoundland jurisdiction.

Many Newfoundland officials hold to the view that the correct delimitation was made in a sessional paper issued in this colony in 1864. Under the phraseology of this document Newfoundland would be entitled to thousands of square miles of the interior of the Labrador peninsula in addition to the coast.

Great Pulp Resources of Quebec

Louis Piche, Provincial Forester, estimates that in Quebec there are 360,000,000 cords of all pulpwoods. Of this amount, there are 155,000,000 cords of available spruce and balsam which, at the present rate of cutting, namely, 3,000,000 cords per year, would give about 52 years' supply. It is estimated that there are, in Ontario, 250,000,000 cords of spruce and balsam. Of this it is estimated that at an early date the cut will be 1,500,000 cords, which indicates 67 years' supply. New Brunswick, with 36,000,000 cords of spruce and balsam, and an annual cut of 1,250,000 cords, has sufficient for a twenty-nine years' supply.

From Wood Waste to High Grade Products

A Philadelphia firm have sent out a notice in respect to the utilization of sawmill waste which is of interest. They say, in part: "By our process you can convert all of your waste resinous pine wood into the following high-grade products, viz.: wood pulp, rosin, turpentine, pine oil, wood alcohol. We install in a suitable building, to be supplied by you, a complete converting plant; license you under our patent, and train a mill superintendent of your selection in erecting and operation. The plant will be of a portable type so as to enable you to operate it to the best advantage. You will be able to convert a present loss into a very interesting profit by purchasing our process."

British Interests Buy Bronson Limits

The timber limits of the Bronson Estate at Chelsea on the Gatineau River, have been purchased by British interests who are contemplating the establishment of a large match and box industry in Canada. The purchasers are said to be Maguire, Paterson & Palmer, Limited, match manufacturers of Britain. The company has in view several locations in and around Montreal for the establishment of the new plant, but nothing definite has yet been decided upon.

A Canadian subsidiary of Maguire, Paterson & Palmer, Limited, is expected to be formed and an office has already been opened in Montreal preparatory to this step. The price paid for the timber limits is said to be in the vicinity of $1,000,000, and it is thought probable that the new plant will represent the investment of another million.

Cutting Shorter Length Logs in Pulpwood

In the virgin pulpwod forests of Ontario, a balsam tree 10 inches in diameter at breast height is, on an average, 90 years old, with a total volume of 14.6 cubic feet. White spruce of the same diameter is 114 years old, with a total volume of 14.9 cubic feet. Black spruce is 144 years old, and has volume of 14.7 cubic feet. Seedlings grown in a nursery, and transplanted in the open, will make a much better growth than those in the virgin forest, but, even if they reach a

Miscellaneous

Auction Sale of Timber Licenses

UNDER AND BY VIRTUE of the powers contained in a certain hypothecation which will be produced at the time of sale, and under and by virtue of all other rights and powers thereunto enabling, there will be offered for sale by public auction on Saturday the 20th day of November(1920, at the hour of eleven o'clock in the forenoon by C. M. HENDERSON & CO., AUCTIONEERS, at their premises, 128 King Street East, in the City of Toronto, the following property, namely,—ALL THOSE CERTAIN LICENSES to cut timber in and upon certain portions of the Township of Proctor and on the North shore of Lake Huron, which licenses are known respectively as Numbers 90 and 91 of the Season 1920-21 and being Berth No. 142 in the said Township of Proctor and Berth No. 143 on the said North shore of Lake Huron, each parcel containing an area of thirty-six square miles more or less, as set forth and described in the said licenses, saving and excepting thereout all such lots or parcels as are thereby excepted.

The limits for which these licenses are held are said to be favorably situated and easy of access. It is reported that there are upon the limits fifteen million feet of Hemlock; four million feet of White Pine and ten million feet of hardwood, suitable for manufacture into lumber.

TERMS: Ten per cent. of the purchase money to be paid down at the time of sale and the balance to be paid within thirty days, without interest.

The licenses are offered for sale subject to all the conditions and regulations of the Department of Lands, Forests and Mines of Ontario affecting the same.

The licenses will be offered for sale in one parcel and subject to a reserved bid.

Further particulars, terms and conditions of sale will be made known at the time of sale or upon application to Messrs. Johnston, McKay, Dods & Grant, Traders Bank Building, Toronto, Solicitors for the vendors.

DATED at Toronto this 30th day of September, 1920. 20-22

For Sale—Timber Limits

187 Square Miles in province of Saskatchewan, including Saw Mill, Planing Mill and general equipment such as Logging Engine, Tanks, Rutters, Snow Plows, 30 sets McLaren Logging Sleighs, etc., etc., For further information address the Saskatchewan Lumber Co., Limited, Crooked River, Sask. 22-25

Sale of Timber

Tenders will be received by the undersigned up to and including Saturday the 20th day of November next, for the right to cut the timber on a number of townships in the Porcupine Mining Division of the District of Temiskaming.

For further particulars apply to the undersigned or to Mr. W. G. A. Wood, Crown Timber Agent, South Porcupine, Ont.

BENIAH BOWMAN,
Minister of Lands and Forests.
October 20th, 1920. 21-22

Auction Sale of Timber Berths

The undersigned has received instructions to sell by public auction at Orillio on Tuesday, November 23, at 2 p.m., two excellent timber berths in the Township of Ballantyne, District of Nipissing.

These two berths comprise 26½ square miles. They are situated just east of South River and within six miles of Wasing Station on the Canadian National Railway. Parts of the berths lie within the boundaries of Algonquin Park.

The pine on these limits was taken off years ago, but the other timber has never been touched. An estimate prepared for the Department of Lands, Forests & Mines places the amount of timber on these two berths as follows:—

Berth No. 2, Ballantyne

10,000	feet Pine
7,415,520	" Hemlock
8,533,500	" Birch
125,500	" Ash
748,000	" Soft Elm
18,000	" Basswood
215,000	Cords Chemical Wood
20,860	Telegraph Poles
60,000	Railway Ties
2,300	Cords Spruce.

Berth No. 4, Ballantyne

150,000	feet Pine
5,500,000	" Hemlock
13,500,000	" Birch
750,000	" Ash
600,000	" Soft Elm
125,000	" Basswood
130	Cords Chemical Wood
25,000	Telegraph Poles
100,000	Railway Ties
7,000	Cedar Telephone Poles

These figures are believed to be conservative.
Further particulars on application to

British Government Investigates Possibilities of New Sources of Fuel.

While mothers are finding it hard to get sugar enough to preserve fruit and children must eat less and less candy, scientific men are talking of using sugar to produce fuel for the automobiles which have taken the place of horses in many countries. Instead of making sugar from the juices of the cane, the beet and many other plants, alcohol for fuel will be produced. The British Government, because of its many colonies in the tropical zone where much sugar is planted, has been investigating this new source of power.

So often has it been said that the world's available supply of petroleum is rapidly decreasing, that no longer is anyone alarmed by a repetition of the warning. Yet it is highly probable that within the next third of a century, gasoline and derivatives of petroleum will be so rare as to be of comparatively little value to the motor car industry.

On the other hand, if a motor car fuel can be obtained from a vegetable growth, it is evident that the supply will be practically inexhaustible, because each season nature will renew the source of supply in the fields.

A committee of the British Government, appointed to investigate the matter, reports that it is of the opinion steps should be taken to ensure increased production of power alcohol by the extended use of vegetable matter from which it may be obtained.

Some of the most important materials of this nature are: sugar-containing products such as molasses, sugar beets and mangles; starch, such as maize and other cereals; potatoes and cellulose-containing products, such as peat, sulphite wood pulp, lyes and wood. In Hyderbad, India, the sun-dried flowers of the mahua tree contain, on the average, 60 per cent. of fermentible sugar.

This product, it is further stated, can be set down at the factory in the vicinity of the plant's place of growth, at about $7.50 per ton. The yield, under scientific treatment, is about 90 gallons of alcohol to the ton.

Inasmuch as gas power is today a tremendous force of industry, driving, as it does, automobiles, trucks, tractors, farm machinery and airplanes, it is unthinkable that governments should not take adequate steps in time to meet the certain future deficiency of petroleum products.

The fuel of the future is certain to be grown—not mined, as at present.

Sawdust Cattle Food.

Surely the price of beef should drop if the new sawdust cattle food described by a food chemist to his associates at Chicago comes into vogue. A representative of the Forest Products Laboratory at Madison, Wisconsin, reported that by the use of dilute sulphuric acid which was afterwards neutralized by lime, he was able to make a very satisfactory provender for the lowly kine out of the waste of the buzzsaw. After the lime and acid have been eliminated there remains a soft branlike food containing about 15 per cent. of water and rich in sugars. Three cows at the laboratory took this ligneous diet on trust, believing it to be grain, and not only did they fatten on it for three months, but gave more milk. The United States Department of Agriculture was so pleased with the experiments at Madison laboratory, which is under its jurisdiction, that it has given directions for the repetition of the experiment on hundreds of cattle at various stations under its control throughout the United States. If the final tests are satisfactory any farmer who has a good woodlot need not worry over famine.

TIMBERLANDS FOR SALE

We have many attractive properties listed with us, for sale, in all parts of Canada and Newfoundland, in both Freehold and Crown lands.

BRITISH COLUMBIA
Large tracts of Cedar and Spruce situated on tide waters and the larger rivers, with or without saw mills.

NEW BRUNSWICK
Some very fine Freehold hardwood properties.

NEWFOUNDLAND
More than 3,000 square miles of the best timbered pulpwood land in the Colony.

ONTARIO
Many pulpwood and hardwood tracts, both Freehold and Crown land.

QUEBEC
Some excellent Freehold properties running heavily to pulpwood. Large pulpwood limits on the Upper Ottawa and on the North and South Shores of the St. Lawrence.

Cruiser's reports and blue prints, where available, will be sent to Principals or their accredited agents.

Review of Current Trade Conditions

Ontario and the East

Generally speaking, business in the lumber line is passing through a quiet period and very few carloads are being disposed of. There is a disposition on the part of retailers and also consumers to hang back and await developments. On a falling or unstable market it is rather difficult to do business, at least until the members of the trade are convinced that quotations have struck rock-bottom.

Prices are holding fairly firm in most lines and particularly so on white pine, although there have been some rather sharp reductions in merchantable hemlock and spruce is off a few dollars.

The whole situation is one that presents considerable difficulty to analyze, and no one can gauge the future with any degree of certainty. Many concerns are preparing to curtail operations, and this particularly refers to hardwoods where, owing to the collapse of the automobile industry, requisitions for stock are rather isolated. Many exaggerated reports are flying around regarding the large stocks on hand which some lumber firms have, the loss that they will have to take owing to falling prices, the character of the prices, etc.

The bottom has not fallen out of the lumber business by any means, and as soon as demand re-asserts itself, which will likely be in the early spring, there is but little fear that prices will once more soar. They may, of course, not reach the peak which they did last season, but there is going to be a much-decreased cut in the East, and even in Ontario production will be considerably less in certain districts. Much will depend upon the attitude of labor, the cost of supplies and whether the scale of wages comes down. It is expected by some operators that men will be much more plentiful around the Christmas holiday period and that wages, which are now abnormally high in logging, as compared with similar jobs, will sag. At present lumber prices, millmen contend that they cannot go ahead and produce lumber and make any money. Rather than proceed on a no-profit basis, they will curtail the extent of their operations. Practically all the mills in Ontario have closed down, and this will release a number of men for the bush.

Much in regard to the wood products situation is at six's and seven's at the present juncture, and the great question arising in the trade is what will be the attitude of the public toward lumber prices in the spring and will building proceed on a larger scale than ever or will a period of comparative depression set in? There are signs and counter-signs, some portending unusual development and others pointing the way to extreme dullness. At this writing it is not possible to give any authoritative information on how matters will eventuate. There is practically no demand for B. C. products. The mills there are closing down, the American market having been practically eliminated and the requisitions from the prairies being exceptionally few. Lately a despatch was sent out from Washington, which reads as follows: Recent increases of 35 to 40 per cent. in Canadian railway freight rates had practically eliminated lumber shipments from British Columbia to the United States, according to a report to the Department of Commerce from Consul Wakefield at Prince Rupert. During the past 12 months, the Consul said, British Columbia exported 20,000,000 feet of spruce and 60,000,000 shingles to the United States, while the only lumber now being shipped was contracted for before the rate advances. Spruce mills are closing down or curtailing operations, he added.

Writing to the "Canada Lumberman," a leading firm in Boston say that the mill owners down south, comprising the largest operators in Georgia and Florida, have reduced common labor at the plants to $2.50 a day and that wages for other classes of workers will be cut proportionately. This represents a decrease of, approximately, 25 per cent. Commenting upon the action of the Georgia-Florida concerns and contrasting their stand with that of some organizations in Canada, the company say:

"It seems to be the case still in Canada that they are paying enormous wages in the woods and having hard work to get men. Everywhere in the United States men are getting more plentiful and wages are being reduced. As you know, Southern pine is now selling so far below spruce and white pine as to be a serious menace to that business. If the pulp industry doesn't modify its ideas of wages in the woods it will be serious for the Canadian lumbermen, we are afraid. The lumber market is certainly going to be affected by the market down here in Boston, and this boom in pulp and paper cannot last forever. In fact, we have heard there was a rather serious amount of countermanding of orders in this neighborhood lately. It has been predicted by some that the paper and pulp prices had already reached their peak, and are likely to go like sugar before a great while."

Building operations for fall are fairly active in the larger centres in Ontario. An increase of almost $400,000 in building operations in Toronto for the past month over October, 1919, is shown by the records of the city architect's department. Building permits compare as follows: October, 1920, $2,883,302; October, 1919, $2,490,936. The value of buildings for which permits have been granted in Toronto so far this year is $22,849,642, in comparison with $15,243,766 for the same period last year.

Great Britain

The restraining influences of the great strike had taken effect in a perceptible manner in the attitude of all consumers of hardwood. There has been little business moving, and on all sides buyers are content to mark time and anxiously await the progress of events. In view of the uncertain outlook it is natural that a more or less cessation in the demand should be experienced, and the prospect if the strike continues, is, needless to remark, full of grave possibilities to every existing trade.

From accounts derived from America, the era of the fashion for utilizing oak for furniture and fitments appear to be gradually receding, says the "Timber Trades Journal." Mahogany and walnut are fast supplanting this wood, especially the former. It was the general opinion in pre-war days that the supplies of walnut in the States were about exhausted, and it occasioned much surprise when such great quantities of high-class wood were forthcoming during the war for gun-stocks and propellor work. As is well known, there was a considerable surplus of walnut left on hand in our markets, and as there has been no recurrence of the former demand for this wood by the cabinet trade of this country, most of these stocks have been re-shipped back to the States. The appreciation of the wood by the American consumer has been fairly active for a long time past, but not so much in regard to their native-grown wood, buyers showing more eagerness to purchase figured material, and this they have found in the timber of Circassian growth, which has been shipped in large quantities from this market.

The decision of the Government Committee to guarantee employment in the building trade, or rather to guarantee a large proportion of wages when work is stopped, is not to be taken unconditionally by the men's unions. Ministers have pointed out lately that the slow pace of building is not due to finance or to red-tape obstructions, but simply to lack of labor. This shortage of men is due, in its turn, to the rigid rules of the men's unions against the admittance to their ranks of ex-soldiers not formerly in the building trade.

The f.o.b. situation is becoming a little clearer as the close of the shipping season approaches. From Sweden it is known that the shippers have very little beyond "scrapping" specifications, which, even if they wished to dispose of them, would be a difficult matter. However, there does not seem to be any disposition to sacrifice on the part of the Swedes, says the "Timber News."

The Finnish exporters have a few specifications which are tolerably respectable for disposal, but the complex situation in the U. K. created by the labor difficulties and congested state of the docks at some of the importing centres has effectually throttled British buyers, who will probably remain content to handle their present stocks.

Large quantities of Canadian spruce have arrived in this country of late, and the flood will continue for some little time longer—possibly all during the winter from the lower ports. Many of these shipments are not unconnected with the operations of the Associated Importers Ltd.

The importers and merchants are likely to commence this winter with quite good stocks, but as there are many indications of a strong demand, there should be no fear of any collapse in prices from the market point of view, provided, and always provided, the importers do not lose their heads.

United States

The great election is now over and the Republican wave has swept the country. Business interests are now looking to the future but it is not expected there will be any sudden revival in trade nor will industrial activity and expansion come over night or in the twinkling of an eye. Some newspapers say that it will be three months and others six months or perhaps longer before any radical alteration in conditions can be hoped for. The general tone of the press favorable to the new administration is that too much cannot be

anticipated in the way of immediate results from the outcome of the late campaign. It would be a serious mistake to have a very general revival in trade and an inauguration of an era of prosperity before the liquidating and equalizing process has been completed, says one lumber paper. Today many staple lines of industry have reduced their prices below the cost of production. The other lines, because of favorable conditions or by manipulation, maintained the price of the commodities they manufacture or distribute at high peak prices.

The road to prosperity must first be levelled down and the bumps and obstructions which still exist, in the way of robber prices, must be removed.

A very concrete illustration of this fact can be found in the building trade. Forest products have been reduced all the way from 40 to 100 per cent. The material sold by a retail lumberman constitutes only about one-third of the total cost of a modern home. Those who manufacture and distribute bathroom, plumbing, heating and other essential fixtures are asking today approximately the same prices they did last February or March. Skilled and unskilled laborers have not volunteered to work for less wages or longer hours for the same pay. In some instances there has been a marked improvement in their efficiency. The home builder finds that, while the lumbermen would give him very substantial concessions, others from whom he must purchase material or labor are still on the old basis, and accordingly the total reduction from the high peak prices amounts to only 10 or 15 per cent.

The benefits to be derived from the new administration will undoubtedly have to be spread over a long period of time. One of the biggest problems which must be solved is finances. Credit and confidence is a big factor in the business world. During periods of abnormal prosperity people in all lines are willing to take chances, and accordingly comparatively small money suffices to do the business of the country. When everybody gets conservative and cautious, they not only want the money that is due them but insist upon doing business largely on a cash basis.

It is certain that before we can again enter into a long period of prosperity, the iniquitous and vicious system of levying taxes by the government must be radically revised. As it is today, thrift, economy and activity are penalized. Money which is absolutely needed to carry on various enterprises is confiscated by the government, often based on paper instead of actual profits.

The lumber business of the whole country is largely in a stagnant or dormant condition. In the eastern states the stringency in the money market is given as the reason why little building is being done. Retail lumbermen are not inclined to push sales except where they can get cash in return for their material. Most of them are doing their best to get in old accounts and make a good showing the first of the year.

A more stable price basis, it appears, is approaching in the hardwood market. There will be more or less price fluctuation for some time, such as usually precedes the settling down process, but hardwood men do not believe that there will be any consequential change from the present level. Early stabilization of hardwood prices is absolutely essential, for just as long as it remains uncertain buyers are going to stay off the market and business is going to be poor; but just as soon as it becomes clear that the downward trend of the market has been checked there is bound to be an extensive revival in buying.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Demand at Ottawa Slackens But Prices Remain Firm

A slackened demand, with prices remaining firm and the tendency toward the woods labor situation showing an improvement, marked the Ottawa lumber market during the opening period of November The outlook to the end of the year, while not hopeful of heavy or increased business, was considered bright.

The fact that prices did not tend to reach lower levels, or that no weakening in the pine or spruce grades had been shown was considered by the trade as a particularly good omen. On the whole lumbermen did not look for any advance in price of any of the grades until after the beginning of the new year, though a few expressed optimistic views that the values of some of the white pine grades would go higher before the new season's sawmill cut came in.

The presidential elections in the United States and the season of the year was generally remarked by the trade as being two of the most important factors in the slowing up of business as compared with a few months ago.

In regard to the influence of the presidential elections it was referred to that the American yards and buyers had shown a tendency for some weeks past not to make purchases of any, unless necessary, Canadian stocks until after the presidential contest was over. Others of the trade were inclined to the belief that the approach of the usual slow fall and early winter season and beginning of the mills book-balancing period was accountable for the slow business.

Foreign cars for shipments with destinations in the United States were plentiful. Rail transportation facilities were good. Orders were not as plentiful as they had been, and inquiries showed a tendency to drop away. What business was done chiefly centered around the pine and spruce grades. Lath and shingle showed a little or no movement. The call for the domestic trade was chiefly for the middle or lower grades and was largely used for repair or alteration work.

From the woods end came reports that there was being exhibited a greater energy on the part of the woodsmen to go into the woods, but from other quarters it was stated that the effort on behalf of the workers may have come too late to ensure all of them getting the expected employment, owing to some of the companies some weeks ago having to cut down the number of their woods camps, in view of the impending and actual shortage of labor existing at that time.

On the other hand, some reports indicated that some of the companies with camps already manned and ready for operation in the different pine belts were closing them up with a view of lessening production so that the pine market would not be overstocked next spring. Little credence was placed in this view by the bigger lumber operators.

Generally it was pointed out that there had been a shortage of production for the last four years and the likelihood was that there would be a further decrease this year. Most of the Ottawa mills were seriously hampered in this season's sawing operations by the shortage of logs due to low water and other causes, and in the case of the W. C. Edwards Company, a whole month was cut off the sawmill season. The total saw cut for this season for this mill, which has led the Valley for the last three years, will, it was reported, fall even behind that of 1919.

During the early part of the month a reaction was noticed in the level of the Ottawa River which rose sixteen inches in two days. The raise proved a welcome one to the lumbermen and pulp operators who held out hopes that a further raise would be shown before the ice set in, which would provide a more satisfactory outlook for the operation of the pulp and paper mills and power companies during the winter months.

Conditions with the local woodworking factories remained pretty much as they had been during the month of October, the demand for sash and door products remaining fairly brisk.

Export Lumber Trade at Quebec Over for the Season

The export of timber and sawn lumber from the port of Quebec has practically come to a close as far as the present season of navigation is concerned. The total extent of shipments during the past summer is not yet computed, but when the statistical returns are available, it will be found that the amount of business done by the Quebec shippers does not leave very much room for complaint, taking into consideration the condition of the United Kingdom market, high rates of freight and the rate of exchanges. With the exception of three more sailings of the Canadian Pacific Ocean Service passenger lines, the "Empress of Britain," steamer "Victoria" and "Empress of France," which are all under contract to carry parcels of deals, few other ocean steamers are booked to sail from the port of Quebec. The exceptions are the coming here of one more Manchester Line steamer, the "Manchester Hero," due shortly to take on board a half cargo of timber and deals, and two Head Line boats, the "Ramore Head" and "Metmore Head," who will first proceed on to Montreal and on their way to sea will stop over at Quebec to take on half cargo of wood. It must be understood that, while navigation of the St. Lawrence is practicable from Quebec to the sea for months after the channel between Quebec and Montreal is closed by being frozen over. navigation of the St. Lawrence and the close of its season is governed by the port of Montreal, where all the chief agencies of British steamship companies are located, and advise the head offices of respective

interests in the United Kingdom, and this curtails navigation of the St. Lawrence from the port of Quebec by two months at least.

The Manchester Line steamers "Manchester Division" and "Manchester Brigade," and the Canadian Government Merchant Marine steamer "Canadian Raider," were the last ocean vessels to sail from Quebec with lumber and deals. The two former took on board half cargoes and the latter-named a deck-load of deals. The stability of the freight rates this fall was a disappointment to the Quebec shippers, as they expected an appreciable decrease and which, to a large extent, was responsible for the absence of heavier shipments in comparison to previous years. But the essential feature to be considered is the falling off in demand by the United Kingdom markets, and Quebec shippers spoken to realize that the demand for next year from the United Kingdom for Canadian wood will be very conservative.

One of the factors to account for these conditions is the distribution by sale of the vast quantity of lumber purchased in Canada during the war by the Imperial Government, now being sold in England, and the quantity that still remains in New Brunswick to be shipped. Another factor that interferes with buying in the Canadian market is the rate of exchange. The British purchaser has grown impatient over the prolonged depreciation of the pound Sterling, and quite a number have declared that they will make no further purchases than absolutely needed until the rate of exchange considerably improves. In the meantime, the Quebec timber and lumber manufacturers have under serious consideration the imitation of the trade in other Canadian provinces to curtail their production during the coming winter. Some even go to the length of saying that they will close down their mills altogether, while others declare they will cut down their production by fifty per cent. The primary reasons given are, in the first place, their yards are all well stocked from last year's production, and secondly, on account of the demand of jobbers and labor for increases for their services.

The scarcity of labor is a problem these days caused by the rush of labor into the woods for the cutting of pulpwood for firms who are offering higher wages. Shippers, discussing the situation with the "Canada Lumberman's" correspondent, state that, while they do not expect to see any appreciable change in the United Kingdom market for some time to come, express the hope that, now, the United States presidential election is over, business interests in that country and its timber and lumber markets will revive and that the American concerns will get down to serious business, that will lead to a reaction in the building trade. This will create a demand for Canadian woods that will ameliorate the present dormant conditions of the United Kingdom as regards its wood markets.

The pulpwood trade of the district of Quebec recently received a jolt that came unexpectedly and has been responsible for a decrease in the price of pulpwood. The purchasing power of the American pulp and paper interests having come to the conclusion that they were paying too much money for the pulpwood they were receiving from Canada, quickly began to increase their supply and stock their yards, and when this was accomplished, notified the Quebec shippers that they required no more pulpwood at the prices they were called upon to pay. They gave out that their supply was sufficient to carry on for the present, and would not purchase any more pulpwood this winter unless the figure was considerably reduced. Some of the Quebec dealers, supported by the banks, became alarmed and made a reduction in their rate per cord, while proprietors of this wood in the Baie de St. Paul district got cold feet and made a substantial cut in price. The majority of the Quebec pulpwood dealers were not, however, pleased by the unexpected change in the situation with the knowledge that the American pulp and paper mills would sooner or later require their wood. Some dealers, who keep themselves well informed as to conditions and the stock of pulpwood in possession of their American customers, say they saw the bluff coming and, at the same time, knew that the American mills had not more wood in stock than would keep them going longer than three months.

One Quebec pulpwood dealer and shipper to the United States market expressed himself as follows: "There is undoubtedly a tendency on the part of the mills in the United States to force the price of pulpwood down, and market conditions for pulp and paper are not quite as good as they were. But it must be remembered that pulp and paper mills can still pay the present price for pulpwood, even if they have to accept for the finished product a drop of 25 per cent. under the prices that were prevailing a few months ago. It only requires a little patience, and for the Quebec pulpwood shipper not to get nervous or anxious in the present, and they will find that all will come back and prices will remain."

The firm of Price Bros., Limited, recently reorganized and signed a contract with Lord Beaverbrook to supply the London Daily Express, of which he is the proprietor, with fifteen thousand tons annually for three years. Every day this firm is refusing orders that are offered by American newspapers, likewise foreign publications, to enter into contract agreements for the supply of newsprint. The reorganization of the Price Bros., Limited, will be completed in all details very shortly, when it is expected that a big expansion of the firm's business will be proceeded with, and in the course of time when the necessary machinery can be obtained to be installed in their new Chicoutimi plant, the output will be greatly augmented.

New Process of Kiln Drying

A kiln drying process which will dry one-inch softwood lumber green from the saw, to 10 per cent. moisture content in 24 hours or less has been developed at the U. S. Forest Products Laboratory at Madison. The novel feature of the process consists in forcing superheated steam at high velocity first in one direction and then in the opposite through the pile of lumber in the kiln. This treatment dries the lumber very uniformly and rapidly with a minimum of checking and warping. Drying lumber by this process consumes more steam per thousand feet of lumber than ordinary kiln-drying processes; it somewhat reduces the toughness of the lumber and cannot be used in thicknesses of more than two inches. It is suited to Douglas fir, fir of all kinds, western hemlock, white cedars, sugar pine and both western and southern yellow pine, but not to some softwoods on account of collapse.

The Parent Body and Its Branches

In the system of religious education and development in any community, it has always been contended by the most successful denominational bodies that the Sunday school, the young people's societies, the mission bands, etc., are the greatest feeders to the church. These subordinate organizations form a sort of training ground, a nucleus of interest, a rallying centre and a source of education, and inspiration for growth in membership, strength and character.

In a similar sense it is the district associations and small local bodies which are going to make the membership of the Ontario Retail Lumber Dealers' Association strong in numbers and influential in standing. The bigger issues, such as transportation, insurance, cost of doing business, overhead, deliveries, general order forms, credits, collections, arbitrations, etc., can well be attended to by the bigger body, which meets once a year. There are, however, many local problems and district perplexities which are peculiar to certain localities that need adjustment. It is to these that the District Associations give attention and render judgment. Their sittings are like family gatherings, where the dealer from one town becomes acquainted and has a social chat with the fellow from the adjoining village. They have a unity of interest and a bond of sympathy which is not felt in a larger body. Then district sessions are held three or four times a year when all the members come together and have wholesome, friendly converse around the table. There is no formality and each man is asked to give his views. In the numerous expressions of opinion on trade topics, much wisdom is presented and not a few invaluable pointers gained. When a retailer becomes vitally concerned in his District association, his interest in the trade broadens and increases. He desires to become an aggressive member of the bigger body, the O. R. L. D. A.

When the latter was organized three years ago, there were only five district associations and today there are eight, the latest effort in this direction being among the retail lumbermen in the Niagara peninsula. Comparisons are invidious but the Southwestern Ontario Retail Lumber Dealers' Association, the Orangeville District and the Stratford District are, probably, the livest of any in the province. These men assemble frequently and a continuity of connection and friendship is established. Another matter of importance is that Mr. John B. Reid, president of the Ontario Association, is proving himself a live wire in visiting the different districts and delivering timely addresses, not only on organization work but in explaining several of the weightier matters which come before the Ontario Association. He also points out its work and worth to the industry as a whole.

The idea of the president attending at least once a year the different district meetings and getting more intimately acquainted with the members is a splendid one that will, doubtless, be followed by succeeding presidents. A link of unity and bond of interest is maintained and the relationships which exist between the different subordinates and the provincial organization will become deeper and stronger.

What small societies or guilds are to the aggressive church or community so alert, vigilant district bodies are to the Ontario Retail Lumber Dealers' Association, which will hold its annual meeting in Toronto in February next. It is understood that already several plans are under way for the extension of its operations and the widening of its powers, not only as an institution itself, but in the work which it has done and is doing in placing the retail lumber business on a higher plane and teaching men how to do real business on sound principles and at the same time remain friendly and co-operative in spirit.

Cutting Shorter Lengths in Pulpwood

(Continued from page 61)

total age 50 years for balsam, 74 years for white spruce, and 104 years for black spruce. It is advisable, therefore, that, in all logging operations, the fullest utilization possible be made of every tree cut, and that every precaution be taken to avoid injury to those left standing, in order that they may produce a second crop in the shortest possible time.

Where logs of only one length, 16 feet, are being cut for pulpwood, there is a loss, due to waste in stumps and tops, of 25 per cent. of the total volume of the tree in balsam, 14 per cent. in white spruce and 20 per cent. in black spruce. These figures are based on actual measurements, where the stump height averages about 18 inches. Where winter cutting is done, stumps cannot be cut much below 18 inches, owing to the depth of the snow, but the waste in tops can be reduced by cutting to smaller top diameters. This would necessitate the cutting of different lengths of logs, say, 10, 12, 14 and 16 feet, the increased cost of which would be more than offset by the greater production per acre. A 3-inch top diameter makes a gain over the 4-inch of one cord for every 223 trees, a gain over the 5-inch diameter of one cord for every 89 trees, and over the 6-inch diameter of one cord for every 53 trees.

The short logs in water will not support a man's weight, and may, therefore, be harder to drive but on the other hand because they dry out more quickly, float higher in the water than the long lengths and are not so liable to form jams.

Cutting shorter log-lengths increases the number of cords which may be cut per acre; it lengthens the cut of any given area; it gives the unmerchantable trees that much more time in which to grow to a size sufficient to enable the area to be cut a second time, and it decreases the fire hazard through the fuller utilization of the tops.

Thinks Pulp Situation Will Ease Up

Angus McLean, vice-president and general manager of Bathurst Lumber Company, Limited, Bathurst, N.B., pulp and lumber producers, declared on his arrival in New York from abroad that Canada will take care of the United States in paper supply because of easy transportation and on account of her proximity to Canada's logical market. England will get her paper and pulp from the Scandinavian countries in greater quantities than heretofore, he said.

Angus McLean, Bathurst, N. B.

"While abroad I discussed the paper situation with Lord Beaverbrook and it is his opinion that pulp will ease up," said Mr. McLean. Lord Beaverbrook did not carry out his intention of buying a paper mill in Canada because of "extreme prices asked for property," according to Mr. McLean.

Preserving the Forest Wealth of Ontario

The great importance of the proper management and conservation of the forests of Northern Ontario was presented in a stirring address delivered before the Rotary Club in Toronto recently by Robson Black, of Ottawa, secretary of the Canadian Forestry Association. He pointed out that the forest wealth exceeded that of the mineral resources and that the task of conservation was primarily one of state leadership.

"When we speak of forest conservation we refer not to a garden of weeping willows, nor even a square mile of tall pines," said Mr. Black, "but a procession of workmen in a wilderness of timber, new traffic for railways, a guaranteed supply of wood materials for all time to come and the annual tax bill of the Canadian citizen paid more liberally from other sources. We have been accustomed to treat the forest as a way-station to agriculture. Fifty years ago this was a fairly innocent self-deception. Today, however, when the development of timber lands holds out a more powerful magnet to new industries, new population and new towns than any other asset within our provincial control, the notion that Ontario's main bodies of timber are growing on agricultural soils is holding back the public from intelligent support of any general scheme of forest management. Taking Canada as a whole, eight acres out of ten were fixed by Providence as a permanent tree farm. Stripped of timber they loom up as a No-man's Land forever.

"We are accustomed to lay the blame for the denuding of forests to the lumberman's axe, but in all the years of Canada's history the axe has cleared not more than one hundred thousand square miles, as against one million square miles on which the fire fiend has had free play."

Mr. Black described how the exhaustion of spruce areas in the Eastern States and Lake States had started an exodus of gigantic American mills across the Canadian border. The newspaper publishing business of America required sufficient supplies for a daily output of forty million copies. One New York newspaper alone stripped fifteen acres of dense Canadian forest for each Sunday edition. Any one of the large Toronto newspapers would devour at least 200 average-sized trees in a single day's run. The newspaper publishing business had no intention of quitting its job as long as any part of the world could feed it every twelvemonth with a pile of four-foot logs piled four feet high, and extending in length for 9,500 miles.

"The vast areas to the north of Ontario's main belt of agricultural soil constitute a natural spruce farm capable, under proper management, of retaining our present pulp and paper and lumber industries for all time to come, and drawing scores of additional industries with a great volume of new population," said Mr. Black, who pictured the great stretches of forest laid as "a one-hundred-million-acre plant, ready-made, with no inheritance tax, manufacturing timber out of air, water, sunshine, and a pinch of mineral salt—a factory requiring few human workmen, very little overhead, except fire insurance, free raw materials, and the manufactured product—the tree trunk—all 'velvet' for the public owner.

"That is what a natural forest looks like in terms of everyday business," said the speaker, "and yet we have put the torch to two-thirds of the entire plant, killed off the greater part of the white pine factory; we have blocked the way to numerous new mills, and year by year are raining blows upon the basic security of our pulp and paper plants and their thousands of employees."

May Reforest Area in Every Township

In an effort to encourage reforestation of waste lands in Ontario, the Department of Agriculture of the Ontario Government is endeavoring to have a demonstration wood plot established in each township throughout the Province.

"If the Township Council," declares the departmental letter of instruction to agricultural representatives, "will purchase an area suitable for this purpose on a well-travelled road and have it properly fenced the Government will undertake to supply and plant trees to reforest such area and look after it in the early years of growth. Such an area of land should not be less than five acres or more than ten acres."

It is made clear in the letter of instruction that all such demonstration wood plots will be vested in the township, and any profit which may ultimately accrue will go to the township.

Several Timber Limits to be Sold

Timber limits aggregating over 200 square miles have been put up for tender by the Ontario Government. The limits are scattered throughout the north country, running from small bits of one or two square miles to limits of 72 square miles. There are two of the latter size, one in the Townships of Kimberley and Cairo in Timiskaming, and another in Thunder Bay, in the district west of the Townships of Hele and Sterling. There is one limit of 30½ square miles in the Townships of Ryan and Palmer, Algoma, Timis- of 15 square miles in the north half of McFadden Township, Timiskaming. The balance are small limits, for the most part adjoining limits of operating companies. In the past these would have been disposed of without tender, but under the new policy of the Department of Lands and Forests they must be tendered upon in the usual way.

The Carriage You Are Looking For

Our No. 1 Size

CARRIAGE—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1¾ in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

EDGINGS

Ontario

Kilgour Bros. Limited, Toronto, were recently granted a federal charter of incorporation to manufacture and deal in boxes, packages, books and other paper products. The Company will operate with a capital not less than $2,500,000.

Midland Woodworkers, Limited, of Midland, have opened an office at 129 Spadina Ave., Toronto, which is in charge of Frank A. Ransom, who will cover Toronto and Hamilton and the intervening towns in the interests of the firm.

The Port Arthur Division of the Provincial Paper Mills, Toronto, has been successful in tendering for a timber berth of 70 square miles in the township of West Heal. It is estimated that the limit contains about 75,000 cords of pulpwood.

Hon. Beniah Bowman, Minister of Lands and Forests for Ontario, stated recently that while several large timber limits were also in tax arrears, no confiscation action would be taken by the Government. The situation differed from that of the mines, in that timber limits were a surer means of revenue.

Canada Barrels & Kegs Limited, Waterloo, Ont., were recently granted a federal charter of incorporation to take over the concern of Charles Mueller Co., Limited, and to manufacture and deal in boxes, barrels, kegs and other wooden and paper containers. Capital $500,000.

The Haugh Lumber Company, Limited, Windsor, Ont., have been granted a provincial charter to conduct a general lumber business as sawmillers and timber merchants. Capital, $40,000. Two of the incorporators are C. W. E. Depew and R. E. Parker, both of Windsor, Ont.

Until the question of finance has been more fully determined Hamilton will make no further attempt to launch an independent housing scheme to overcome the shortage of workmen's houses. This was the decision reached lately at a conference of a joint committee of the Independent Labor party, the Chamber of Commerce, the Hamilton Housing Commission and the Board of Control.

The planing mill and sash and door factory of the Whitby Brick & Clay Products Co., Whitby, was totally destroyed by fire recently. The loss amounts to upwards of $25,000. The management has intimated that the plant will be rebuilt, but it is not definitely known whether construction operations will be undertaken right away or held in abeyance until spring. The new plant will be constructed of hollow tile made by the company itself. If suitable arrangements can be made with the G. T. R., an unused portion of the roundhouse will be equipped as a temporary factory.

A serious fire occurred in Arnprior recently when S. R. Rudd had a shed burned in which was stored a large quantity of white pine lumber estimated at 97,000 ft., door and window frames, lath, etc. In a short time the shed and contents were wiped out, together with 25,000 ft. of lumber piled outside. The white pine was being seasoned preparatory to being made into furniture, in which line Mr. Rudd intended branching as soon as proper arrangements could be made. The cause of the fire is a mystery. Mr. Rudd places his loss at $12,000, partly covered by insurance.

According to information furnished it is understood that the Dominion Shipbuilding Company, Toronto, which has been idle for the past few months, will start up again at the end of November. When the shipyards closed down the company had in hand two unfinished Government boats. In order to complete these and finish and contract the Government has requested the Henry Hope Company of Peterboro', Ont., to complete them. This they have consented to do, and will probably commence work about the end of November. It is hoped that further orders may be forthcoming and the plant be kept running throughout the winter.

Mr. W. F. V. Atkinson, formerly with the Spanish River forces at Sault St. Marie, lately accepted an appointment as forest and hydraulic engineer for the Dryden Pulp & Paper Co., Ltd., of Dryden, Ont. Mr. Atkinson will have charge of all forestry, stream-flow and water-power work for the company, which owns 1,157 square miles of timber limits adjacent to Wabigoon and Eagle Lakes, and has an interest in 2,000 square miles of additional limits in the same district. The company is now developing 2,000 h.p. at Dryden and owns a water-power at Eagle Lake which is partially developed. Construction work is now in progress for the completion of this development to 5,000 h.p. in charge of B. S. McKenzie of Winnipeg as consulting and construction engineer. The company is also erecting a new 40-ton ground-wood mill.

The annual report of the Port Arthur Shipbuilding Company, Limited, formerly the Western Dry Dock Company, Limited, and one of the companies originally mentioned in the British Empire Steel merger, is available. Gross profit from operations after deducting cost of material, labor and manufacturing overhead, was $538,369, and after general and administrative expenses, with other income added in, net income in the year which ended June 30, last, was $483,296. After deducting bond interest, and other charges, net earnings for the year were $301,215. Total assets amounted to $5,982,162. James Whalen, the president, states that work has commenced on a contract for twenty compressed air mine shovels and that other contracts of the same nature are assured. The manufacture of pulp and paper machinery and digesters is contemplated.

Eastern Canada

The Pontiac Lumber & Pulp Co. recently lost their saw mill repair shop and machinery by fire at Makamick, Que.

Price Brothers and Company, Limited, Quebec, P.Q., have been incorporated to manufacture paper, cardboard and other pulp products Capital $60,000,000.

Papeterie du Saguenay, Limited, Chicoutimi, Que., have been incorporated with provincial charter to manufacture and deal in pulp and paper. Capital, $500,000.

Horace P. Webb, who has been a member of the staff of the N. B.

Provincial Forestry Dept. for some time, has resigned his position and gone to Chatham where he has entered the employ of the J. B. Snowball Lumber Co.

Landry Pulpwood Co., Limited, Quebec, P.Q., have been incorporated to conduct a wholesale and retail business, dealing in lumber and all kinds of pulp products. Capital $100,000. A. Landry, Sr., and J. Landry, Jr., both of Lac-au-Saumon, P. Q.

Sir George Perley, Canadian High Commissioner in London, will sail soon for England from Montreal. Sir George is a former well-known lumberman, who, previous to his removal to London, a few years ago, took an active part in the industry.

The timber limits of the Bronson estate at Chelsea on the Gatineau River have been acquired by the British firm of Maguire, Paterson and Palmer, Limited, for a new match factory. Before the outbreak of war the company secured their raw material from Russia, but Bolshevism stopped their supply. Japan and Poland were tried in succession, but results were not satisfactory.

One of the largest dealers in pulpwood, operating in New Brunswick, informed the Canadian Press recently that a big slump in pulpwood prices may be expected in another season. On account of the stringency in the money market and the uncertainty of prices for 1922 delivery, he predicted that operations in pulpwood next year would be greatly curtailed in New Brunswick.

The mill and lumber lands which were owned by the late B. J. Thibodeau, of Boiestown, N. B., have lately been sold by his sons, Lee and Milton Thibodeau, the purchaser being Daniel Lynch, of Boiestown, one of the veteran lumbermen of the Miramichi. The mill is located near Astles' crossing on the Clearwater stream, and the lands are in what is known as the Portage district.

Western Canada

The sawmill of Gibson & Merrick, at Squamish, was recently destroyed by fire. The mill had been in operation three years and had a capacity of 50,000 feet a day.

The damage incurred in the longing railway accident recently at the Robt. Dollar Company camp, Port Coquitlam, B. C., is estimated roughly at $100,000. The train consisted of a "Climax" engine and five loaded cars—all now a mass of junk.

Tenders for railway ties totalling 1,500,000, for use on the Canadian National Railways, were called by the purchasing agent, during September, deliveries to be made over a period of eleven months beginning Nov. 1. Nine hundred thousand of the ties were for use in British Columbia, to be delivered to the Grand Trunk Pacific, and 200,000 in Alberta to the same line.

Paper rugs and carpets, "made in Germany," were brought to Vancouver a few days ago by Mr. A. Christensen, formerly in the employ of the Whalen Pulp & Paper Company, at their Swanson Bay plant. Mr. Christensen has just returned from an extended tour of Norway and Sweden, where he has been studying pulp and paper markets. While in Norway he secured samples of the paper rugs. They varied in thickness from that of a sheet of ordinary newspaper to one-quarter of an inch, and were closely and evenly woven. The prices at which they are sold are very low, one fine sample 4 x 9 feet costing $2.00 in Norway.

W. H. White, head of the Beaver Cove Pulp and Lumber Co., Ltd., announces the completion of his plant at Beaver Cove, Vancouver Island, where a saw mill and shingle mill, as well as a pulp mill, have been erected. Mr. White has carried the project through almost single-handed, his long experience in lumbering and lumber manufacture in the east having been of vast service to him in his ambition, now realized, of establishing a pulp mill on the Pacific Coast. Mr. White was born in Ontario, near Owen Sound, and early in life went to the Michigan pine woods. In 1907 he came to the Pacific Coast making large investments in B. C. timber.

Away on a somewhat extended trip, Mr. W. J. Van Dusen of the export firm of H. R. MacMillan & Co., Ltd., Vancouver, left for the East lately. His destination is Buenos Aires, where he will look into the market for B. C. timber in the Argentine. To reach the South American port Mr. Van Dusen found that by travelling via London, it would cost very little more either in time or money than if he sailed from New York direct for Buenos Aires. The incidental advantage of the London route, which he chose, will give him an opportunity to call on the firm's British connections in the interests of further old country orders. Mr. Van Dusen will be away for some time.

The assets of the Canadian Pacific Lumber Company, comprising the mill and property at Port Moody, timber holdings at Alberni and other places in the province, mill-sites, freehold property, water records, and timber licenses, were recently sold for the sum of $780,000 to the London & Canadian Investment Company, represented by Mr. Eric Hamber, who bid the property in at the price named. The sale was under mortgage authority, and was conducted by J. S. Rankin, auctioneer, acting on behalf of the mortgagees. There were but few people present at the sale, and not many bidders, though at the price realized the property was considered away under value. The plant at Port Moody has been operated under lease during the past summer.

Prices unheard of in the history of lumbering are being paid to the British Columbia government for fir and cedar timber. A sale which probably holds the record for all time, was made recently when timber rights on 225 acres of land at Ramsay Arm, situated on tidewater, at a point 130 miles north of Vancouver, was sold for $36,000. In this case the figuring was done on a stumpage basis of $5.30 per thousand feet for cedar and $4.10 for fir. The net return to the government will be $160 per acre. Added to the high prices the mills are getting the benefit of approximately 15 per cent. exchange on shipments to the United States, where nearly half the British Columbia cut has lately found a market. The volume of business in timber can be guessed from the fact that the government sales of standing timber are now approximately three quarter million dollars weekly.

C. H. Belton of the R. Laidlaw Lumber Co., Sarnia, returned recently after a successful hunting expedition at Fox Lake in the Sudbury district.

Install a "By-Pass" Exhauster

in your Saw Mill, Planing Mill or Plant

Our "By-Pass" Exhaust systems save your power and give better service. They handle green sawdust or wet, stringy material that usually clogs up an ordinary Blower system. The fan wheel is not overhung. No heating, clogging, or shaking. Three bearings.

Write for information.

We manufacture and install systems complete.

Toronto Blower Company

156 Duke St., Toronto

The Chief Cause of Forest Destruction

Under the head of the "Belching Smoke-Stack," T. Kelly Dickinson, of the firm of Winans, Dickinson & Whitehead, Limited, Montreal, has written a timely and interesting article, which has been appearing in the press. He refers at length to the perpetuation of the great natural resources of Canada, and respecting their conservation, says, "We have heard much, learned little and cared less."

Continuing, Mr. Dickinson remarks:—

An article which appeared in The Canada Lumberman and Woodworker, in February last, entitled, "Wantonly Wasting Many Growing Forests," was most instructive and well worth the consideration of all who are interested in the conservation of our forests.

In respect to European methods of Forestry, it is interesting to note that the Premier of Quebec, immediately upon taking office, declared his intention of sending some members of the Provincial Forestry Department to Scandinavia to study forestry as practised in that country. . . . Nature in a great healer. It is estimated that in the course of the past 200 years fully 80 per cent. of the timber resources of the forest areas of Canada has been destroyed by fire—and Canada today is the White Man's Hope for uninterrupted delivery of the daily newspaper, with one billion cords of coniferous pulpwood species standing erect awaiting the call of the pulp consumers.

Fire Protection in deed and not in need; a comprehensive aid-to-nature plan to enable the trees to propagate their species, in addition to seed planting on parts of cut-over lands, offer the only solution that is practicable, economical and certain of definite and profitable results.

Destruction by fire is the root of the evil of forest depletion. Fire will wipe out in one short week more fine timber than the whole producing machinery of the Dominion could cut down in the course of a ten-year period. That being a fact, is it not the imperative and immediate duty of the provincial governments to take every conceivable precaution? Much advancement has, no doubt, been made in fire protection, but, curiously enough, the Federal Government's own steam locomotives and the provincial government-urged colonists are the greatest source of danger to our forest areas. Locomotives are allowed to belch live coal into inflammable material in the northern parts of Quebec and Ontario, and the would-be farm settler buys the best of timber land, at 50c per acre, cuts the timber, sells and ships it to United States mills, and jumps the claim. In the process of masquerading as a potential farmer, this gentleman only too often cleans up the debris from his lumbering operations by means of more or less regulated bonfires.

Thus we have the two chief causes of forest destruction located, but not cornered, as the effect has still a wide range of freedom for dangerous work.

If there is danger from live coal, let us get rid of live coal. Electricity in this province is cheap enough, in all conscience. The capital expenditure for electric or for oil-burning locomotives would be saved in one twelve-month period. Electric storage locomotives with the necessary generating stations, as used by the New York Central, surely could be installed on those parts of the railway systems which run through the richest of our forest areas.

Let us put the lid on the belching smoke-stack, and if timber areas are the only lands in this province available for the so-called colonist, the colonist should be urged to go elsewhere to farm, without the preliminary back-aching process of stump extraction.

Pembroke Lumber Company Changes Hands

As announced in the last issue of the "Canada Lumberman," the British interests, which own the large match manufacturing business of Maguire, Paterson & Palmer, Limited, have recently decided to extend their operations to the Dominion of Canada, and have procured the incorporation of a company under the name of "Maguire, Paterson & Palmer, (Canada) Limited," having their head office in Montreal, and an authorized capital of five million dollars ($5,000,000.00.) The company have acquired all the properties previously belonging to the Pembroke Lumber Company, who hold upwards of 800 square miles of timber lands, with mill properties located at Pembroke. A large splint manufacturing business will be established at an early date in Pembroke. The Canadian company have now under consideration the location of a match factory.

The lumbering operations presently carried on by the Pembroke Lumber Company will be continued by the new interests under the name of Pembroke Lumber Company, Limited, with which company Mr. E. A. Dunlop has become associated in the capacity of president.

It is intended that other developments will be undertaken in Pembroke by the newly organized companies as the development of their businesses require.

Speaking of the recent transfer a Pembroke paper says:—

The old shareholders, besides Mr. Dunlop, were Dr. J. D. Deacon and Messrs. C. Chapman, L. M. Chapman, John Bromley, Mrs. (Hon.) Peter White, Senator G. V. White, and the Estate of A. T. White. The mill limits and plant were purchased from the late W. R. Thistle in 1880. The business was originally established by the late John Rowan about sixty years ago. New limits have been acquired from time to time and the company now controls much valuable standing timber. Camp operations will proceed as usual this season, with practically the same organization directing affairs as under the old order. In fact, so far as the general public is concerned the business will go on just as formerly.

As to new industrial developments, the erection of a splint factory is assured immediately. In this plant match splints (meaning matches without dipping) will be manufactured, and it is hoped to have this in operation by the middle of January. In all some 75 acres of land are involved in the purchase from the Pembroke Lumber Co., including the old Mackie flat between the river and the C. P. R. track, comprising about thirty acres, and on this the factory will be built. It is proposed to move the large wooden building from the Iron Works property and set it down on a concrete foundation on the new site, and work on this will be started at once, the contract having been awarded to Fraser, Brace & Co., of Montreal. It is intended to get two sections (about 450 feet) moved this fall, and machinery installed to commence work in January with between 300 and 400 hands. Some

E. A. Dunlop, Pembroke, Ont.
President of new company which will operate and extend plant in Pembroke.

of the machinery has already been shipped from England. Next spring the factory will be extended, the ultimate plans being for a building 900 x 140 feet. A large gang of men will be needed at once for moving and building operations.

It is planned to erect next season a shook mill for the manufacture of knocked-down boxes for the company's own use, while other plants are also in prospect, though as yet nothing definite in regard to these has been given out. A match factory will be built in Canada, and it is hoped that this plant will be located in Pembroke. In fact we have the assurance of Mr. D. P. Maguire that other enterprises will be proceeded with in Pembroke by the newly-organized companies as the development of their businesses warrants, and while nothing official has been given out there is every reason to hope that within the next few years the new concern will have a pay-roll of several thousand hands.

Costs High and Production Will Lessen

Vancouver representatives recently returned from an important conference of coast and mountain lumbermen held at the Palliser Hotel, Calgary. Messrs. J. McMillan, F. A. Plant of the Vancouver Lumber Co. and R. H. H. Alexander, secretary of the British Columbia Lumber and Shingle Manufacturers' Association were among those present from the coast.

It was the general feeling that prices were going to be lower. According to one of the Vancouver lumbermen, ever since last June the demand for lumber has been slackening and demand was light at the time of the recent freight increase. The effect of the increase had been a temporary check on buying.

The majority of the mountain mills were closed now, and others would soon close for the same reason. Production was, it was stated, considerably under what was originally anticipated for the year, and demand was below what was normal for the past five years. Owing to the high cost, labor prices being still at a high level, and in the face of no demand, it was impossible for them to continue operating and piling up stocks not knowing when or at what price they could dispose of them.

"HAMILTON" EDGERS

Dependable Accurate Saw Mill Machinery

Used In Scores Of Mills All Over Canada

LEADERSHIP, after all, ascends to the fittest. Economy, service and value are the qualities which count.

The "Hamilton" imprint has been known for years as a sufficient testimonial for these merits.

"Hamilton" Garland Gang Edgers are especially recognized for their worth. They are strong, accurate and easily operated, made in all widths with necessary number of saws to suit requirements.

Let us get together when you are in need of anything for the sawmill.

We manufacture a complete line of sawmill machinery for either band or circular mills.

GeBott Manufacturing Company

Big Rapids — — Michigan

Do Your Band Wheel Grinding in One Quarter the Time

The GeBott Band Wheel Grinder here shown takes but one hour to set and accomplish the work in one quarter the time taken by an emery wheel grinder.

The machine swings in a rotating frame and can be adjusted to grind either wheel in a few moments. No belts or line shafting to bother with.

It is the only appliance that will grind a Clark mill without going into the pit to grind the lower wheel. Both wheels can be ground from above on any mill where there is enough opening over lower wheel to accommodate the head (about 8 inches.)

May we submit further information.

"Open Kettle" Registered
Extra Fancy Molasses

We know you serve Molasses to your Lumberjacks. Have you ever tried our "OPEN-KETTLE" blend? We have a way of blending several kind of syrups and molasses into one, giving the right taste.

You probably know that Blended Tea has a better flavor than unblended. You will find that same applies to MOLASSES. Of course not all Blended Tea tastes alike and not all Blended Molasses would appeal to you.

Read what Dr. Milton Hersey (Industrial Chemist) has to say:

"We have tested and analyzed a sample of your "Open-Kettle blend fancy Molasses" and find it made of a good quality of syrups and molasses, free from any impurities. It has a high food value. Our tests indicate it is well adapted for eating and table purposes."

We suggest that you give us a trial order for a carload of our "OPEN-KETTLE" Blend at $1.00 per Im. Gal. x F.O.B. Cars Montreal.

Samples will be mailed on request.

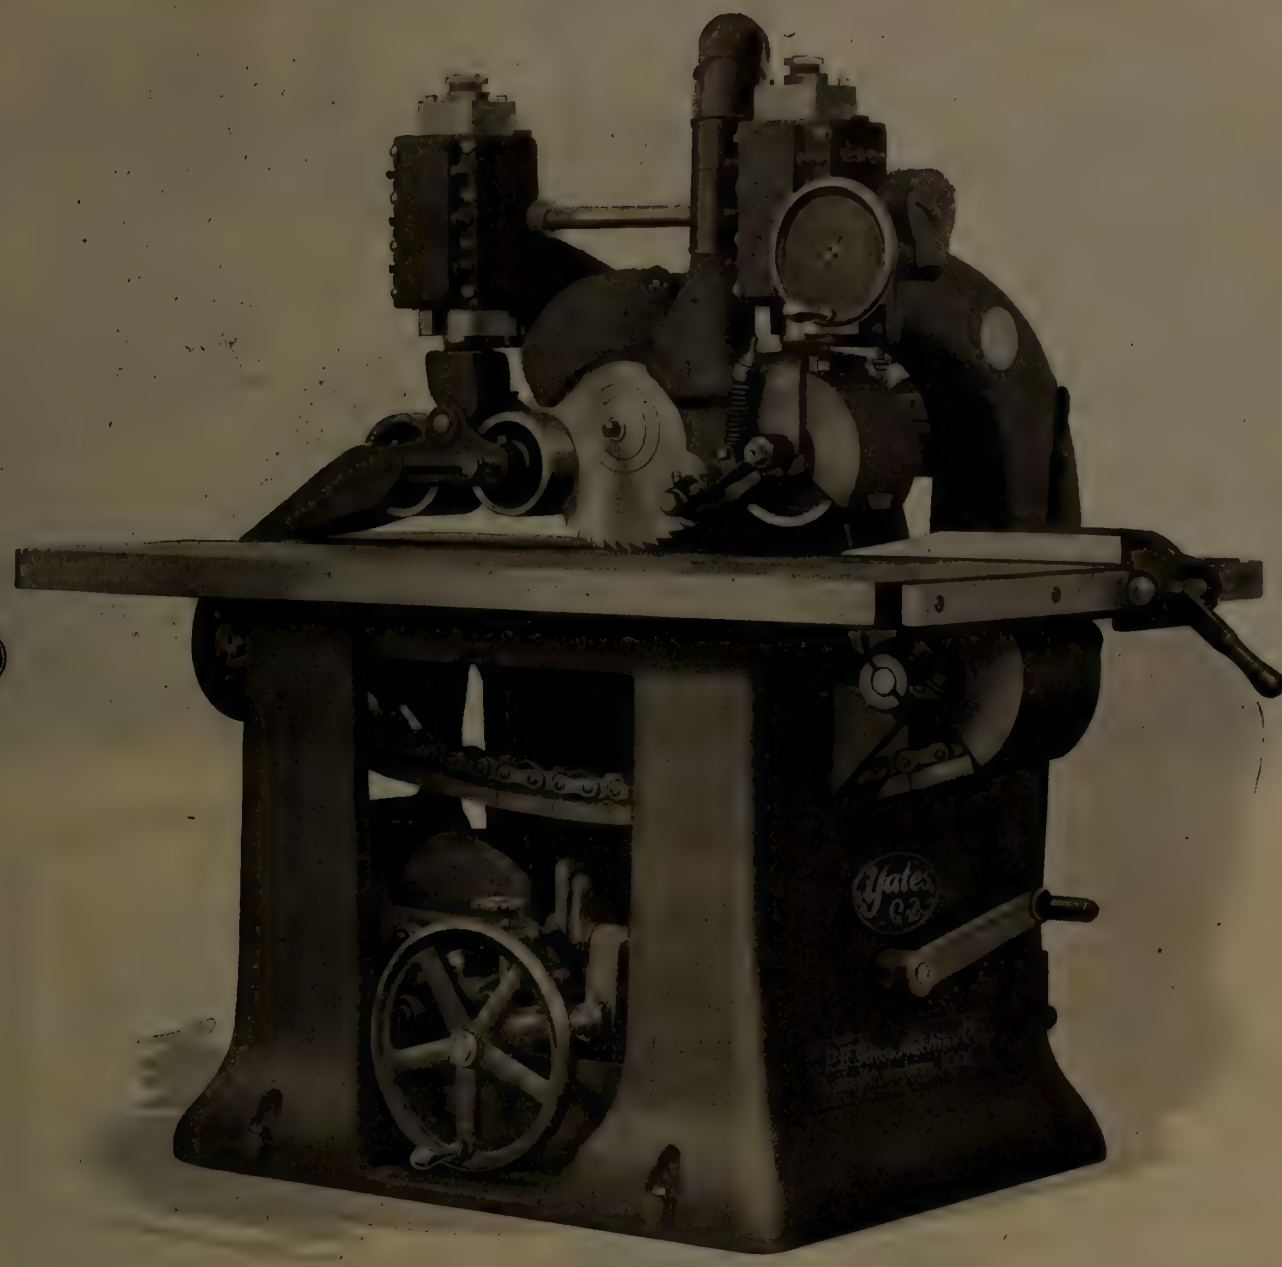
SAVES TIME—SAVES MEN



Never before has man power been so badly needed—never before has time saving meant as much in the way of labor saving.

Yates Type G-2 Ripping Saw

is one of the best tools made to conserve man power. Its solid construction, excellent design, and freedom from mechanical troubles make it a favorite wherever used. Dozens of them are installed all over the United States and Canada. The increase in sales of this machine is proof of its popularity.

Why don't YOU send for descriptive literature?

Atkins Sterling Quality Saws

Grinding Circular Saws

Saw grinding has a very important bearing on lumber production. If a saw is not ground properly production is interfered with. E. C. Atkins, the founder of this business realized this in the late fifties when he invented and developed exclusive saw grinding machines. Many improvements have been made with the result that *Atkins Sterling Quality Saws* are known for their excellent work in the leading saw mills.

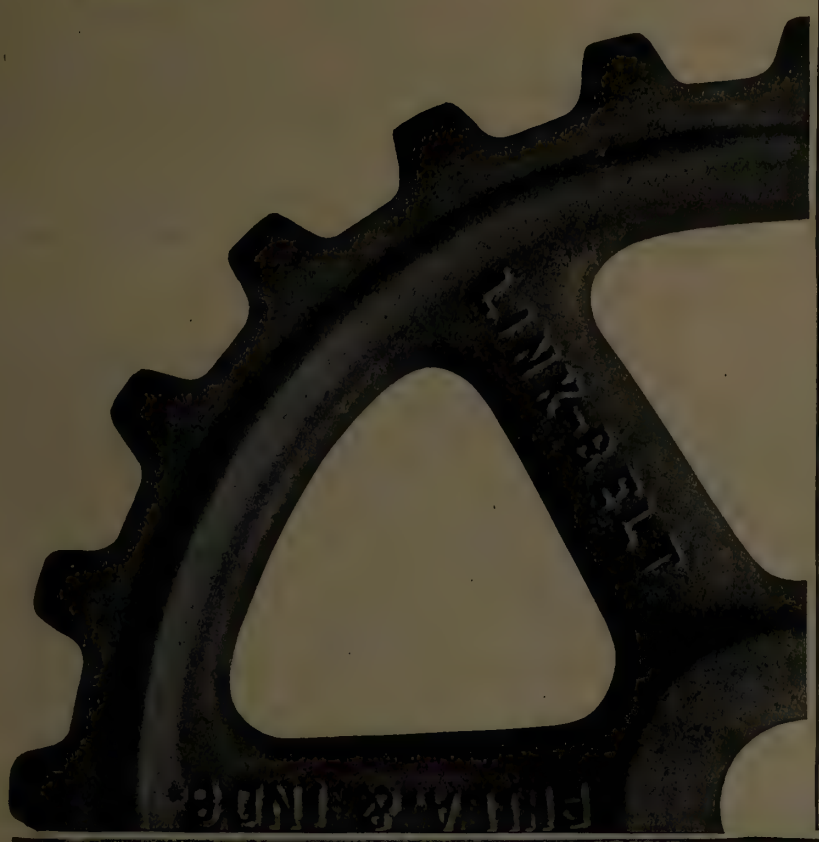
≻FLINT-RIM≺ SPROCKET WHEELS FOR DURABILITY

The life of the chain is prolonged because the wheels do not rapidly wear away from the proper pitch diameter.



≻FLINT-RIM≺ wheels have by years of service under the most trying conditions, fully demonstrated that they are the best wheels ever offered for durability and satisfactory operation.

The reason for this great success is that the ≻FLINT-RIM≺ wheels have smooth, hard bearing surfaces for contact with the links, and are carefully fitted for the chains, thus giving an ideal condition to start with, and maintaining it so persistently that both the wheels and chain are practically insured against undue wear.

The material increase in the efficient life of the installation, eliminates the expense of frequent renewals, and greatly reduces the ultimate cost.

The Marsh Logging Machines Do The Work

This is not a theory—it is a positive fact

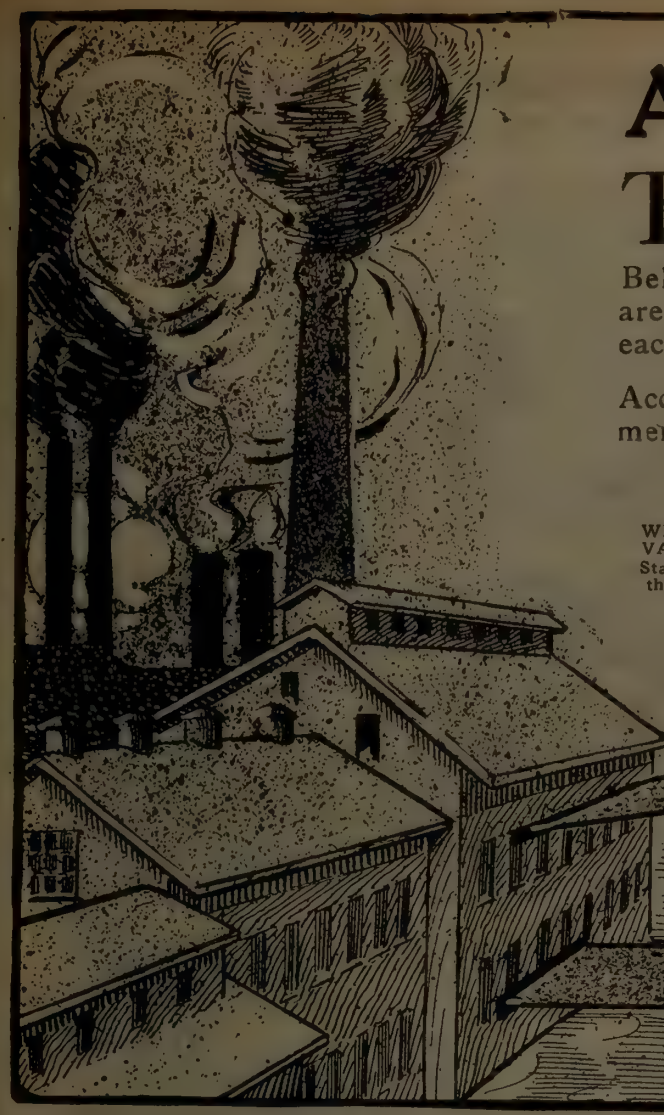
This photo shows one of our little Gasoline Skidders and Loaders in actual use in Ontario timber. It will be seen that this machine is all we claim for it, **light, compact, easy to move about,** yet **powerful enough for the work.**

Perhaps you have had the idea that the "High Lead" system of skidding is useful only in the tall timbers of the Pacific Coast, where it is possible to get a spar tree as high as 200 feet or more. But this photo shows the "High-Lead" system in actual use with a spar tree of only 25 or 30 feet in height. From this spar tree the hooks are carried out by **one** man to the log, which may be 200 or 300 feet distant, or even farther away. The hooks are then made fast in the end of the log or logs, if two or more small ones are to be brought in. The Gasoline Skidder then hauls the log in to the spar tree, the forward end of the log being kept off the ground by the pull of the cable. The man usually walks alongside to assist in clearing obstructions. At the spar tree the hooks are changed to the centre of the log, which is then lifted clear of the ground and loaded on the skidway.

This machine does the work of several men, and at much less cost.

Marsh Engineering Works, Limited Established 1846 **Belleville, Ont.**

Sales Agents: MUSSENS LIMITED, Montreal, Toronto, Winnipeg, Vancouver



A Good Belt Saves Money

THE money wasted in keeping a stretching belt taut amounts to a surprising figure. If you use "Goodhue Belts" in your mill or factory you can save most of this money because "Goodhue Belts" stretch less by 15 to 25 per cent. than any other belt. They are made from skillfully selected hides with the stretch taken out of each section before it is made up into the belt.

According to the conditions under which the belt is to run, we recommend "Extra," "Standard" or "Acme Waterproof" belts.

Send for further particulars and prices.

DUPLEX TRUCKS

BUILT FOR BUSINESS

Is Transportation a Problem In *Your* Business, *Too?*

If It Is, Read This. It is Published in the Desire to be of Help in Meeting a Common Problem

HAVE you ever thought as seriously as you should of the motor truck in connection with your transportation problem.

Not necessarily of the truck in**stead** of the railroads, but of the truck in **addition** to the railroads.

With the average freight car travelling only 25 miles per day business is slowed up in spite of itself.

Here is a big field—big with real and potential aid in helping you to do business **without hindrance** and on terms of practical economy.

Now, perhaps, you say that this won't work out. But wait. **It is working out right now.**

Perhaps your observation or your experience has been with the **wrong kind** of truck. Nine times out of ten, so-called trucking disappointments have been remedied by **using the right kind of truck.**

Maybe you want facts. If you do—write us and we will give you real facts about Duplex Trucks—the famous Duplex 4-Wheel Drive known everywhere as "America's Leading Heavy Duty Truck"; and also some real facts about the wonderful Duplex Limited—the High Speed, Pneumatic Tired Truck that can really haul 3000 to 5000 pounds at high speed over roads as they are.

Read the following and see if it doesn't seem reasonable to believe that these Duplex Trucks are worth knowing about. Write—and do it today.

The Duplex 4-Wheel Drive 3½-Tons Capacity

A Wonderful Truck for Economical Heavy Hauling

IF you have a heavy hauling problem and do not already know the Duplex 4-Wheel Drive, talk to the Duplex dealer and let him give you the facts at first hand.

The Duplex Truck Company is the originator of the 4-Wheel Drive principle and today its most successful exponent.

There is pull and power in every wheel—and the Duplex 4-Wheel Drive keeps going under conditions that are simply impossible for any rear wheel drive trucks.

The Duplex 4-Wheel Drive is setting new records of truck efficiency for Lumber and Logging Companies; Road Builders; Oil Companies; Coal Companies; Mining Companies; Grocery Companies; Trucking Contractors—in fact in all lines where there are heavy loads to be hauled.

The point is the Duplex 4-Wheel Drive is daily proving to be a very **economical truck** for hundreds of owners who used to say it was too big for their needs.

Write us for folders about the Duplex 4-Wheel Drive. Talk to the Duplex dealer near you. He will give you only facts

DUPLEX BUILT FOR BUSINESS

The Duplex Limited

High Speed; Full Electrical Equipment; Pneumatic Tires; Capacity 3000 to 5000 pounds at 5 to 25 Miles Per Hour on High

HERE is a photograph of the Duplex Limited that carried 3060 pounds from Los Angeles to El Centro via San Diego at an **average speed of 34 miles per hour.** No stops during the run. No relief driver. Ran through rain from Santa Ana to Oceanside. **Speed limit observed in all towns in transit.**

Another Duplex running from New Orleans to Baton Rouge with 3750 pounds, 124.6 miles in 6 hours and 55 minutes running time.

Another running from Waterbury, Conn., to Boston—175 miles in 5 hours and 27 minutes.

It fits in exactly with the universal effort **to stabilize schedules;** to obtain **quicker delivery;** and to secure **greater economy.**

4 Cylinder, enclosed type motor—water cooled—cast enbloc—Bore 4-inch, Stroke 5¼ inch. 3 Point Suspension, Pneumatic Cord Tires. 145-inch Wheelbase. Equipped with Windshield, Electric Lighting and Starting, Ammeter, Boyce Motormeter, Speedometer, Electric Horn, Tools, Jack, Rim Wrench, Front Fenders, Alemite High Pressure Lubricating System.

Just the right truck for Delivery, for Inter City Express and for all speed hauls. Get the facts about it

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

Dunbar Engine & Foundry Co.

WOODSTOCK, N.B.

ONTARIO

Canada's Banner Province

Ontario's timber production last year valued at $26,774,937 or 40% of Canada's total output.

Pine production, 905,442,000 ft. B.M.
Pulpwood, 246,282 cords.
Railway Ties, 5,704,459.

Ontario's woodworking industries, using 34 different kinds of wood, provide a ready market for the lumberman. Eighty-two per cent. of lumber used in Ontario's industries purchased within the Province.

Ontario's vast resources offer unsurpassed opportunities to the lumberman.
For maps and full information regarding Ontario, apply to

HON. BENIAH BOWMAN,
Minister of Lands and Forests

Camp Storekeepers—

Let us send you our catalogue, price lists and samples. We are confident that the all round superiority of our line will convince you of the desirability of giving them a place in your stocks.

Everything you require for the comfort and health of your men is included,—clothing, footwear, bedding and tents. Write to-day.

"Durabil" Waterproof Mackinaw Coats, Pants and Shirts, Sweaters, Underwear, Mitts, Socks, Moccasins, etc., etc.

Grant-Holden-Graham, Limited

Factory and Warehouse

147 to 151 Albert Street, Ottawa, Canada

The Cook Knows KLIM

He knows that with Klim he can add a wonderful variety of appetizing and nourishing dishes to the camp menu. He knows that the real milk flavor of Klim will give that home taste to pies, puddings, and many other dishes all men long for.

In isolated camps where hardships are many and comforts few, the "Grub" looms big. Allow the cook an ample supply of Klim and you are assured of "Better Food" and happy, contented men.

Klim is pure powdered separated milk. Simply whip it into water in the proportions given in the directions and the result is pure liquid-separated-milk as fresh and sweet as when it left the dairy.

Klim will neither sour nor freeze. It is light, compact, and easily transported.

Only by using Klim can you know its genuine milk flavor and convenience. Order your supply now in 10 pound tins—six to the case—from your Supply House or direct from us for shipment through any jobber you may name.

CANADIAN MILK PRODUCTS LIMITED

10-12 St. Patrick Street, TORONTO

ST. JOHN WINNIPEG MONTREAL British Columbia Distributors, Kirkland & Rose, Vancouver.

Showing No. 2 Power Machine

If you are using more than one half a bag of vegetables per day you cannot afford to be without a

Cyclone Vegetable Peeler

This machine is guaranteed to pay for itself within one year, in most cases within a few months.

Now universally used through Canada in the leading Lumber Camps, Mills,, Mines, Industrial Plants, Hotels, Restaurants, Government Institutions, Steamboats, Steamships, both Atlantic and Pacific Ocean lines, etc., etc. Tested and proved by over 14 years on the market.

Write for Circular "L"

We manufacture all kinds of kitchen labour saving appliances also "Burns Steel Ranges" for all purposes.

MILLMEN

and others interested in Steam Power Plants

Whether you contemplate building a new or repairing your old power plant it will pay you to investigate our recently patented Steel Water-Jacket Furnace. This brickless furnace is built of heavy steel plates, spaced apart, forming a water jacket all around, carrying same amount of steam as boiler. Splendidly adapted for use of portable mills as it is easily moved and placed in position. Burns sawdust or mill refuse of any description, while at the same time it generates one hundred per cent. more steam than will any other type of furnace. Conforms to any style or type of boiler, either straight draft return or water tube.

Do you, or do you not want to save half your coal? It's up to you. Ask for particulars.

DEMING BROS.,

Woodstock - New Brunswick

In your lumber gangs where the bearings are subjected to severe service, install

Aluminum Genuine Babbitt

This metal is famous in the lumber industry throughout the world, for its ability to stand up under extreme pressure, speed and shock. And a babbitt that will hold up so well in a lumber gang, will hold up under any service.

FOR GENERAL SERVICE

MANGANESE ANTIFRICTION

is the best babbitt metal made. Casts a dense, solid bearing that will withstand hard wear. When melted this metal forms a coat over the molten metal—a protection against the formation of oxides.

Let us send you a trial case of these two metals. We will bill you at the price prevailing at the time your order reaches us.

TRADE MARK

The Machine That Made a Record in a Recent Lath Cutting, 10 Hour Test

Four Hundred Sawmills in the Dominion are to-day using this machine.

It has all the latest improvements and for quick, clean work has no equal.

The Payette No. 1 Bolter and No. 2 Lath Mill will cut, count, tie and pile 128,350 laths in a period of ten hours. The above consisted of 4 foot laths, 1½ by ⅜ inches, and constitutes a record in rapid lath cutting.

If you are not using a Payette No. 1 Bolter you should be.

Shall we send you full particulars and prices?

FIRE BRICK
AND CLAY

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel," "St. Marys," "Keystone" and "M.D. Elk"

STUDY AT HOME
and Make More Money

What Is Your Job?

Are you the man who is bossed—are you doing the hard work while some other man gets the high pay for telling you what to do? Why not be the boss yourself? The only difference between you and the men higher up is in what they know what you don't know. They get their big pay and have the easy work because they know how to direct you and other workmen. If you could read blue prints, estimate on work, know how to direct construction, you too would be in the big pay class. Read below how you can get this knowledge and be a bigger man in your line.

Learn in Your Spare Time

At home—in your spare time—you can get instruction by mail from the experts of Chicago Technical College. You can learn all the higher branches of your trade and soon know as much or even a good deal more than the man who is bossing you now. If you are a workman, you can train for a foreman's or superintendent's job or you can look ahead to being a contractor in business for yourself. This training doesn't cost much and you can pay on easy terms. Look into this now. Just send the coupon below and get catalogs and full information.

FREE
Lesson in Plan Reading

Send the Coupon.

Get this free lesson. See from it how plain every point is made and how easily you can grasp it. Not a cent to pay. This lesson is free—sent to show you how quickly you can advance by taking a Chicago "Tech" home study course in Building. All you need do to get it is to send the coupon.

Complete Builders' COURSE

Prepared and taught by experts. No useless theories. Just the practical things you want to know—told in simple, practical language Easy to understand—and you have the personal direction of the Chicago "Tech" experts who explain everything—make every lesson clear to you.

What We Teach

Plan Reading. How to read a building plan. How to read dimensions. Detail drawing. How to lay out work from plans. Tracings and blue prints—how they are made. Practice in reading complete plans from basement to roof, etc., etc.

Construction Brick Work. Footings and foundation walls of brick, concrete and stone. Brick laying complete. Brick and stone arches. Use of different kinds of stone. **Carpentry.** Kinds and uses of wood, cornices, interior details, etc., etc. Plans and specifications for all kinds of buildings.

Estimating. Practical rules. Problems worked out from the plans. Brickwork and carpentry. Re-inforced concrete. Estimates of labor and material for all classes of construction. Fire proofing, tile flooring, arches, partitions, furring, terra cotta, etc. Lumber and timber; figuring board feet. Estimating mill work. Lathing and plastering, sheet metal work, marble jointing and decorating, glazing, plumbing, heating, wiring, etc.

Arithmetic, Architectural Drafting, Plumbing, Heating and Ventilating all taught by practical men.

Get This Training By Mail

You get all this training by mail and you study in spare time. Not an hour taken from your work. Keep on earning while you are learning—then step into bigger pay as a building expert—get paid for what you know—not for what you do. You be the one to know the "hows" and "whys"—to tell others just what to do.

Send Coupon Now

This brings catalogs and complete information about the course which interests you. See how others have profited merely by study in their spare time—by preparing for the big jobs above them.

Mark X in coupon to show which course interests you.

The Home of "CONDOR" Belting

Made of special woven duck and the best grade of rubber procurable.

Manufactured on giant presses weighing 550,000 pounds each, giving the greatest friction of any belt on the market.

The General Supply Company of Canada, Limited

OTTAWA MONTREAL TORONTO WINNIPEG VANCOUVER

Large Stocks Carried in Canada

Rubber Goods FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P.M.S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

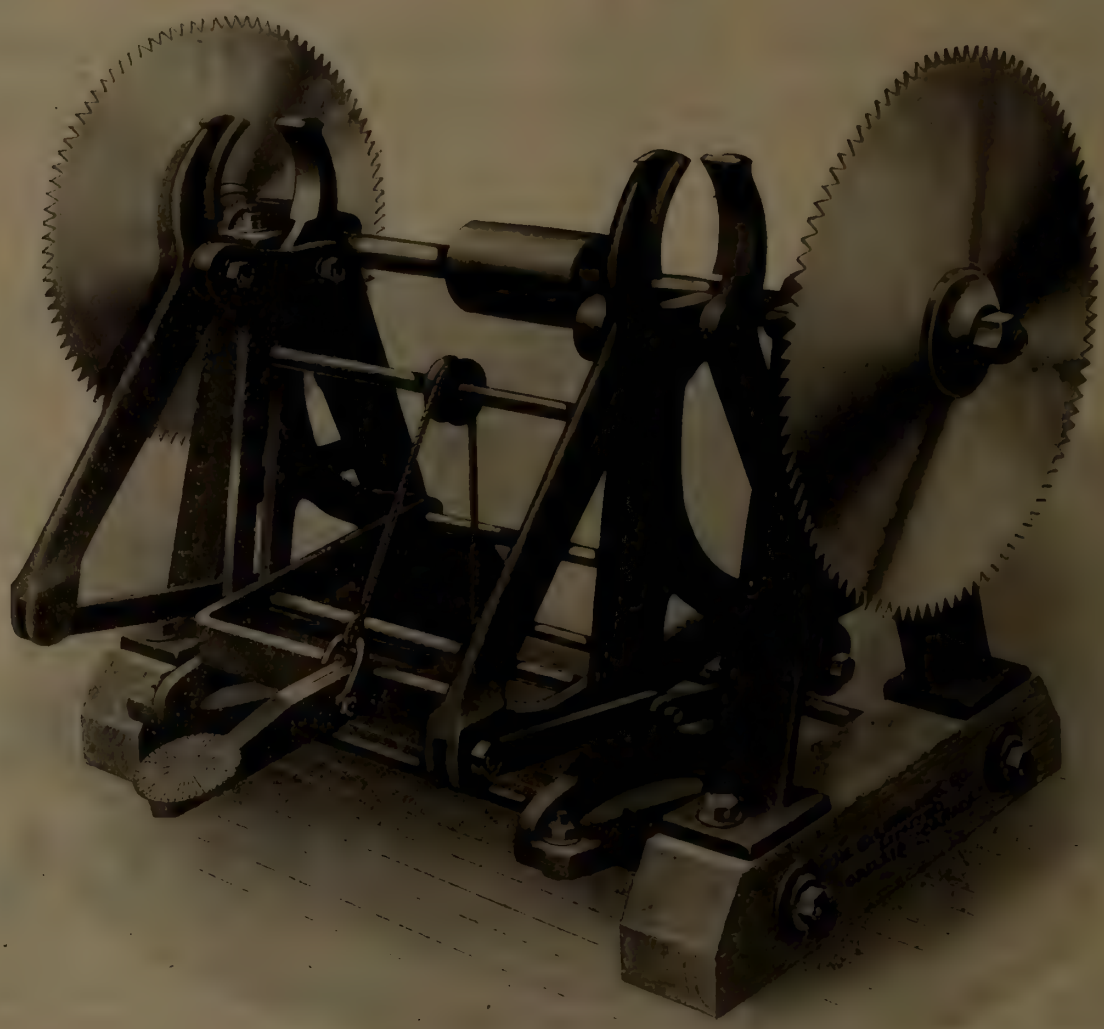
LUMBERMEN'S EQUIPMENT

Combined Lath Binder and Trimmer

Built in two Sizes



The jaws of this binder are made to accommodate 50 lath and with the great leverage obtained by the foot tread a compact, neat bundle is made with little effort. After binding, the bundle is trimmed by simply tilting the frame away from the operator, without removing the bundle from the jaws. This saves two handlings of the bundle and consequently proves a great time saver.

Bundles bound and trimmed in this machine make a very neat appearance when trimmed, as the bundles hold their shape and the ends are all even. The standard machine is spaced to trim 48-inch material, but the machine can be made to trim 32-inch material, if required. Diameter of saws 26 inches.

This machine can also be furnished as a binder only, if desired.

Waterous Boilers

Are Best for Sawmill Use

To get the full steam value out of the fuel you burn install Waterous Return Tubular Boilers. It will pay you for these reasons:—

They are economical of fuel. They carry plenty of steam in reserve for use in emergencies. They can be used with hard and dirty water. They are easily cleaned and readily taken care of.

Furthermore, We Design and supply the fittings for various styles of boiler settings that are suited to best handle the fuels used in the sawmill, giving great efficiency and perfect combustion.

We build and carry in stocks Return Tubular Boilers up to 72" x 18 ft. If we cannot supply you at once from our yards we can turn out your order in reasonable time. Ask us for prices on the next boiler you buy.

BOILERS IN STOCK

1—54 x 14—Horizontal.

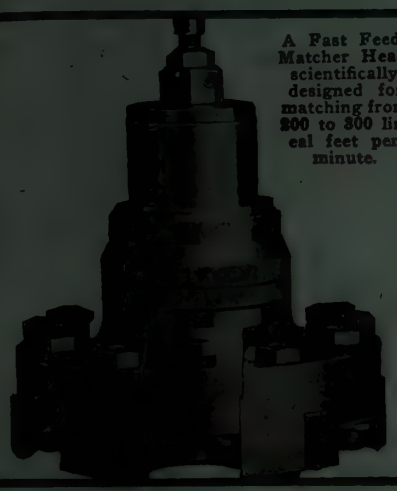
HEAD OFFICE: OTTAWA, ONT.



A Fast Feed Matcher Head scientifically designed for matching from 200 to 300 lineal feet per minute.

The SHIMER Fast Feed Expansion Matcher Head

With 12 High Speed Bits

The head is built heavy where the strain is and is devoid of all angles or openings, which lessen the wind resistance and cannot block with shavings.
These advantages, combined with the Shimer expansion feature, make a combination that is hard to equal.
The straight knives are long, assuring length of service, while the circular knives can be set back, and the straight knives jointed; in this manner the whole width of the straight knives can be jointed at the one setting.
The circular cutter is then brought to its proper location.

The Cheapest and Best Head on the Market. WRITE FOR PRICES

New Standards of Economy Set by Goodyear Industrial Hose

The outside covering on Water Hose, unless tough and sturdy, quickly disintegrates under the constant dragging over sharp objects, particularly in outside construction work. The hose blisters and bursts.

Goodyear has overcome this with a rubber cover of exceptional toughness and strength, a cover which gives longer life—at a correspondingly low cost. The good inner tube and strong fabric are in keeping with this superior cover.

For every industrial use—Water, Air Drill, Pneumatic Tool, Steam, Fire Hose—Goodyear has designed a *special* type of hose, built only after an exhaustive study of modern conditions in industrial work. Goodyear has broken new trails.

If your business is hampered by the excessive cost and unreliability of old-fashioned hose, get the Goodyear data and the Goodyear hose plan. Let a trained Goodyear man advise with you. No obligation on your part. Phone, wire, or write the nearest branch or Goodyear Mechanical Goods Service Station.

The Goodyear Tire & Rubber Co. of Canada, Limited

Branches—Halifax, St. John, Quebec, Montreal, Ottawa, Toronto, Hamilton, London, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver.

Confidence is the Basis of Trade

The reason we enjoy the confidence of our customers is because we ship what we sell and we do everything in our power to make every shipment entirely satisfactory and fully up to your expectations.

BUT—we are not infallible.

Now this is where the confidence comes in.—You know when you place an order with us that we are going to ship you properly graded and well manufactured lumber, and if through, say an error in judgment on the part of one of our inspectors a small percentage of a lower grade gets in, we are just as anxious to know about it as you are, and adjust to your entire satisfaction; also see that the same mistake does not happen a second time.

Try us on your next order

Gregertsen Brothers Ltd.

Suite 1560-61 McCormick Bldg. Chicago, Illinois

Phone: Harrison 8610-8611

Yards: Cairo, Ill.

Mr. Lumberman: Don't you think that it is now time to buy some lumber? On account of lack of buying, mills are shutting down everywhere and there is no question in any one's mind but that the consequence will be a shortage of lumber and sky-rocketing of prices next year. Most of the woods are down to producing cost and now is the time for all good merchants to put in their stock.

The Chicago Tribune quotes:

> Senator William M. Calder, Chairman of the Senate Committee on reconstruction, during a meeting of the committee here in Chicago, as making the following statement:
>
> > "Labor will not go to its pre-war level, prices for materials will not be much reduced and transportation charges will remain higher than before the war. With these facts established, building costs cannot be expected to reach a much lower level than the present for some time. There will be some reduction, of course, but it will not bring the price down to the pre-war figure."

Cypress is a high grade and stable wood and it does not depreciate in your yard—it is worth the money.

WE ARE THE CYPRESS SPECIALISTS

When in the market for "CYPRESS" remember "GREGERTSENS"

If You want the Best Value in Lumber Obtainable in the Mountains, Your Choice Should be

Golden Spruce

GOLDEN AIR-DRIED SPRUCE is unequalled for your requirements in Boards, Shiplap, Shelving, Flooring and Siding, and you can rely upon getting DEPENDABLE GRADES.

EASTERN RETAIL DEALERS will find 1 x 8 GOLDEN EXTRA SELECT SPRUCE BOARDS an exceptionally good seller. Can be worked to any pattern desired. Supplied either 3/4 or 25/32" thickness. Try some.

We also manufacture Fir and Cedar.
Spruce, Fir and Cedar Lath.

Just another reminder—Our stock always comes to you bright, clean, and newly milled, being run through the planing mill at time of shipment.

With a daily nine-hour cutting capacity of 180,000 feet, and a stock of 10 to 20 million feet at all times, we are in position to give prompt shipment. Urgent orders given special attention.

THE LEWIS AND CLARKE EXPEDITION

took cognizance of WESTERN HEMLOCK. The first description of the tree was published in 1814 in the journal of this epoch-making expedition, which passed the winter of 1805 near the mouth of the Columbia River. These explorers spoke of WESTERN HEMLOCK as a tree, "four to six feet in diameter, straight, round, and regularly tapering."

BRITISH COLUMBIA WESTERN HEMLOCK

A very good description of the looks of the tree as it stands in the forest. Modern seekers after "inward truths" find that BRITISH COLUMBIA Western Hemlock is one of the world's richest commercial possibilities.

Some lumber dealers have neglected to utilize its vast possibilities because of a lack of information regarding its merits or because of confusion of it with other species not to be compared with BRITISH COLUMBIA Western Hemlock.

The day has arrived when lumber dealers and users cannot fail to see in this superior product an opportunity to erect better and more beautiful buildings. Government tests prove beyond a doubt that Western Hemlock is as strong as any structural timber and stronger than most of them; it absorbs preservatives when required for strenuous duty, in a manner that insures long life of the wood; and for fine interior finishes it is unsurpassed.

If you have never handled BRITISH COLUMBIA Western Hemlock, it is time that you did some "discovering" on your own account for your own good.

We'll be glad to send you BRITISH COLUMBIA Western Hemlock in mixed carloads along with our other BIG CHIEF Brand Specialties, British Columbia Red Cedar Shingles; and Cedar and Fir lumber in all sizes known to high-class manufacture.

HARDWOOD LUMBER

THIRTEEN BAND MILLS
SIX PLANING MILLS
ELEVEN FLOORING UNITS

ANNUAL CAPACITY:
130,000,000 feet.

We manufacture our lumber for the mutual benefit of ourselves and those who purchase it from us.

We desire to see all of our customers prosperous. This is neither exclusive selfishness, nor unadulterated altruism. It arises from our belief that in the course of proper dealings between buyer and seller, neither is enriched at the expense of the other, nor is one necessarily impoverished if the other is enriched.

Our belief is that our dealings should result equally to the benefit and profit of our customers and ourselves, at the same time.

We make this thought vital in our business, by inculcating into our Sales Department, and into the mind of every salesman, a thorough comprehension of our policy founded on the Principle of Service. We say to them:

Co-operation, not competition, finds its place in this policy. Do not deal with our patrons in the spirit of competition for this leads you to seek to get the most for the least. Serve them in a spirit of co-operation, by seeking to ascertain their needs, and then endeavor to render the most perfect, satisfying service possible in filling the need.

We believe that in final analysis we prosper, only as those we serve prosper.

Our interest and that of our patrons are so similar and so intimately united and inter-related that nothing can be ultimately helpful to us which is not also beneficial to them.

SIMONDS Circular SAWS

Edge-holding, upstanding saws that are backed by the finest grade of Simonds special alloy steel have always been produced by the Simonds Canada Saw Co. Ltd.

For nearly a half-century circular saws bearing the Simonds name have been known all over the world and declared by the users to be the best. The same is as true to-day as in the early days—high-grade steel in the plates, developed by the same type of skillful mechanics, who take personal pride in producing the finest cutting saws in the world.

There is a wonderful service built in all Simonds Saws.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Vol. 40 **Toronto, December 1st, 1920** **No. 23**

Not Fringe But Brass Tacks

If the investigation so far conducted by Messrs. Justices Riddell and Latchford has "only touched the fringe of the timber question," as has been declared by the Premier of Ontario, and that further "startling and sensational revelations" are forthcoming, it is time that greater progress was made.

The inquiry, which was auspiciously begun, has now been dragging along for months and is being carried on in altogether too leisurely a fashion. While public interest is awakened, all the facts should be got at more expeditiously, and if there are any more civil suits to recover large amounts unlawfully withheld from the province, such actions should be taken without delay. It is important that the cleaning-up process be completed and all licenses for berths, which have been "worked" solely for the interest of the holders, promptly cancelled.

The next session of the Ontario Legislature is close at hand and, no doubt, the Commission will have some recommendations to make. Its final report should be brought down in time so that ample consideration may be given to the inauguration of new methods in the department and a more business-like administration in tabulating the annual cuts of limit holders, the disposition of timber berths, the collection of revenues, etc.

Any suspicion of deceit, favoritism or patronage against the Department of Crown Lands in Ontario or the lumber operators of the province, must be removed. If, out of gratitude or expediency, richly wooded limits have been handed over to political camp-followers, the inside history of such transactions must be disclosed.

What the public demands is the whole truth and nothing but the truth, and if, as intimated in the interim report of the Commission, juggling, crookedness and deception have prevailed, then to what extent and who are the guilty parties?

Everything in connection with the business of the Crown Lands Department must be conducted above board. Too much leeway has characterized past administrations, and there have been faults,—grievous ones,—on both sides, not only with those in authority, but on the part of those favored.

All lumbermen who have the highest interest and welfare of the industry at heart will welcome radical measures to disperse any cloud or shadow hanging over the great body of operators, and in seeing that no one, convicted of shameful practices, escapes.

Abuses must be cleaned up and wrongs righted. Every step taken in the direction of safeguarding the great natural endowment of Ontario against waste, plunder and profiteering will be warmly supported.

If any lumbermen who have been granted concessions are guilty of stratagem or trickery or otherwise taking advantage of a slack and inadequate system, they should be held accountable for every penny that rightfully belongs to the province, and the sooner complete revelations are presented, the better for all concerned.

Then all cullers, who have made false returns or failed in any way to observe the requirements of the law, should be brought to justice. Ontario does not want dishonest public servants in any capacity and demands a full measure of integrity, efficiency and devotion to duty.

In the returns made by cullers, which the Commission asserts "contain a mass of perjury and forgery," it is stated that before 1906 there were officers of the Government whose duty it was to check the work of these men by tests supplied from time to time. It appears that this system was changed years ago. Since then the department has had no check by its own officials upon the honesty or efficiency of cullers.

Why was this regulation changed? It would seem that this is one of the evidences of the laxity characterizing the administration of Crown Lands in Ontario.

Again, why was the provision calling for the awarding of all timber limits to the highest bidder, ignored and the pernicious permit system instituted

There are many other "whys" being asked by the public, and if "only the fringe has been touched" it is certainly time that the authorities "got down to brass tacks."

Canada Too Kind in "Business Tips"

While much is heard regarding the splendid resources, beautiful scenery, fertile land and magnificent future of Canada, and the hospitality, loyalty and devotion of Canadians have been referred to in glowing terms, all these count for naught unless a new national spirit, loftier conception and more aggressiveness are awakened in the ranks of the people. It is all very well to be kind and thoughtful of others and to render a good turn wherever possible but when it comes to impairing one's own interest and storing up future trouble; if not loss, the whole matter assumes a different aspect.

Canada possesses all that has been attributed to it and more, but its people need a new vision—one that they should seek by every legitimate means to realize. Self-adulation, artistic word pictures and fine-spun theories accomplish little. Without loyalty and public spirit, without pride in one's surroundings and thorough appreciation of what is best at home, no hamlet, community or nation ever attained a permanent place in domestic, national or world affairs.

The residents of the Dominion need more cohesion, more resolution, more esteem of themselves and more independence. While one does not believe in bluster and egotism they are preferable to inactivity and complacency. A stirring note along this line was lately sounded by F. C. T. O'Hara, of Ottawa, Deputy Minister of Trade and Commerce for Canada. In his annual report he points out many weaknesses of our present commercial system, our leniency and even generosity toward our neighbors, and tells Canadians in plain, everyday language to "get busy and do things." "We have the men, we have the material, we have the transportation lines and the water routes, and there is no reason why business, which is legitimately ours, should be handed over to the United States or any other country," he declares.

Mr. O'Hara believes in building up Canada's foreign trade through Canadian channels and not through those of a foreign power, nor should dependence be placed by Canadian firms upon outside connections. He asserts that every possible effort should be made to "ship Canadian goods through Canadian channels from Canadian seaports to foreign markets to which the goods are destined." The great increase of Canada's merchant marine should go a long way toward assisting in this object. Canadian export trade should be independent of and assist in building up the seaports of the Dominion and direct overseas connections.

The employee or servant of any form, who is afraid to take responsibility and is always referring every question, big and little, to the boss or the man higher up, the fellow who cannot come to a decision of his own and adhere to it when he believes that he is right, who has no initiative or cannot see the next duty ahead, never gets very far in the pathway of promotion or progress, and the same principle applies in connection with a people or a country. As long as we depend upon foreign ships, foreign commission houses and export firms, we will never expand into a country that will by virtue of its power and prestige, command attention and admiration for aggressiveness, initiative and enterprise.

No one blames the other fellow for getting all the business that he can or even building it up at the expense of the smaller chap. So long as the Dominion is content to be "a hewer of wood and a drawer of water" to firms on the other side of the line, and fails to appreciate or develop its unrivalled resources, its own transportation facilities, splendid harbors and merchant marine, it will become stunted in growth and dwarfed in ideas and ideals.

All this and more is summed up in the ringing words of Mr. O'Hara, which should leave a deep impression in the minds of every business-man and manufacturer and result in them getting a new grip on things..

> "Canada imports every day goods made under foreign flags from Canadian raw material. The Canadian purchaser pays the wages and the profits of the foreign manufacturer, also the transportation costs of both raw material and finished goods. In resources and variety of raw materials, in sites and power for factories, in transportation and situation with regard to the world's markets, Canada is unrivalled."

Being just and generous are attributes worthy of emulation, but he who gives away tips to those who take no more than a passing interest in his welfare, is certainly weak and shortsighted. A nation which hands over business, consignments or commissions to other persons or firms at a time when the trade balance is running heavily against it, should, phrenologically speaking, have its head examined.

Editorial Short Lengths

The Government of the Australian Commonwealth has entered upon an extensive programme of construction of homes for returned soldiers. Timber limits have been purchased by the Government, at a cost of several million dollars, primarily for this purpose, according to recent advices received from Australia, and the plan may ultimately develop into a national housing scheme of considerable magnitude. The shortage of houses in Australia, it is stated, is becoming more acute every day.

Their fragrance, excellent working qualities and resistance to decay and to insect pests, make cedars among our most valued woods, says a recent article in "American Forestry." There is the eastern red cedar or juniper, the western red cedar or shingle cedar, the northern and southern white cedars, the yellow cedars or cypresses, the incense cedar, the true cypresses, the atlas cedar and the famous cedar of Lebanon—all members of this big tree family.

Many trees that are not true cedars are thus called because of their resemblance to the woods that smell like cedar. Such is the "Michigan cedar" which is in reality an elm. So called Spanish and cigar box cedar is not a coniferous wood but belongs to the mahogany family.

Cedar is used for cigar boxes because the aroma of the wood is supposed to add to the bouquet of a cigar. The trade custom requires that cigar boxes at least appear to be made of cedar.

Cedar is used in various forms for repelling insects. The chips from pencil factories are distilled for their oil or ground up and sold for use in protecting rugs and woolen garments from moths. The resistance to moths of chests made from Tennessee red cedar and Spanish cedar is widely advertised. But the resistance to insect pests is due not so much to the cedar odor as to the fact that such chests are well made with tight covers and are thus physically exclusive.

The Wholesale Lumber Dealers' Association, Toronto, has made wonderful progress in the last two years and its membership is today double of what it was at the inception. The monthly meetings have been growing in interest and importance and in this respect the November gathering surpassed all previous efforts. Many new features have been introduced of late which tend to impart to the sessions a touch of social interest as well as business association.

The proceedings were enlivened by a genuine, old-fashioned sing song and everyone of the seventy lumber representatives present was made known to everyone else. It was the duty of each guest to rise and publicly introduce the man next to him, stating his name and the firm with which he was associated. In this way everyone got acquainted and a spirit of friendship and bon homme prevailed.

Another feature of the evening was that lumber travellers were all invited to the gathering and met with the wholesalers around the festive board which provided an occasion for the interchange of thought and experience. The speeches were breezy and forceful and no business was allowed to drag. An excellent address, brimful of strong points, was delivered on "Personal Element in Business."

There is no organization which wants to hear shop talk in season and out of season. A little variety is the spice of life, and the regular sessions of the Wholesale Lumber Dealers' Association are not devoted entirely to the consideration of lumber problems, railway transportation troubles, trade relations, credit information, etc., but general information is imparted by representative authorities on closely allied lines, such as finance, insurance, the metric system, legal nature of contracts, salesmanship, etc.

A number of other addresses along other lines will be presented in the near future, which should make the gatherings more edifying and entertaining than even they have been in the past. Other plans are in view to maintain the work and keep up the interest throughout the coming season.

West Looks for Early Renewal of Activity

Sends Out the Sound Advice to Order Now if You Wish Prompt Filling of Specifications and Good Deliveries—Close-up View of Conditions

Winnipeg and Toronto despatches published in coast daily papers as to the situation created for the lumber trade through the recent freight rate advances, are to a considerable extent misleading and incorrect, says the Vancouver representative of the "Canada Lumberman." For one thing, to say that the increased freight rates have "practically shut the British Columbia lumber mills out of the eastern market," which the Toronto "World" is quoted as saying recently, is quite too strong a comment—and not at all justified by the facts. With the further comment attributed to the same paper, that "Southern pine was beating British Columbia fir in the Toronto market now," little if any exception can be taken. It might very well be accurate to make that statement at the present season. For one thing the Southern pine in many cases is not paying a total freight rate, even taking account of the rate increase on American roads, very much greater than the 35 per cent. advance Canadian roads have been given. With that as a start, the old rate from the Coast to Toronto is quite a help towards a profit for the Southern pine mills.

There is another consideration, which is covered in the same item from the Toronto paper, which says "The Toronto lumber market is in a very quiet state just now owing to the slowing up of the building trade." As the same experience in accentuated form is general in nearly every section of the United States, where Southern pine finds a market ordinarily, it is quite to be expected that the Southern mills would be formidable bidders for any stray orders being placed by eastern Canadian dealers. It almost amounts to a case where the "dumping clauses of the Customs Act should be invoked on behalf of the Coast mills.

Reopening Depends on Market Revival.

One Winnipeg despatch to a Vancouver paper undertakes to speak for the Coast lumber manufacturers. It says: "British Columbia millmen say that they will cut no logs this winter on account of low prices and absence of demand in prairie yards." It would be far better to let the British Columbia lumbermen speak for themselves. Had they been asked, undoubtedly the answer from both Coast and Mountain manufacturers would have been somewhat different. They would have agreed in saying that, because there was a sufficient stock of both logs and lumber already cut to meet all present demands, it was the general intention to close down operations in the woods and in the mills to a very large extent, and that re-opening would depend on revival of the market. On the further assertion made in the same despatch from "The lumber industry is unquestionably at a crisis just now, Winnipeg dealers assert," the same criticism would apply. The Winnipeg dealers are not sufficiently well posted to tell whether there is a crisis in the industry. They only represent the buying market in the area in which they work. "Lumber lists have gone to pieces completely in this section," is a further statement in the Winnipeg yarn, and it is offset in the next breath by the assertion that "Dealers want heavy stuff at a maximum of thirty-five dollars, but millmen say that forty-five is the lowest they will cut for." That may make a "crisis" for the Winnipeg dealers who have not been able to get any mill to give them lumber at their own price. But it is no indication of any panic in the lumber industry. Far from it, the lumber industry, so far as British Columbia is concerned, is on a strictly sound basis, even if for some months there has been no great activity in the market and if prices have as a consequence gone down to a point at which the manufacturers refuse to sell and prefer instead to pile it out in their yards until the market gets back to an even keel.

Eastern Inquiries Are More Active.

So far as market is concerned, Coast organizations are finding some interest in the eastern Canadian market, where inquiries are becoming more active, and a fair amount of orders, considering the season have been secured. These are almost invariably for such specifications as can be secured nowhere else than in British Columbia, and which could never be competed for by the Southern pine producers. And it may be said that for all such orders, fairly good prices have been paid. Such specifications have a recognized value and the people who want the stock are well posted on that value and when they need the material are ready to pay the price. There is nothing very exceptional in the prairie market, which never is active at this season. The only feature to comment on is that the dull winter season follows an abnormally dull fall trade with the prairies.

Several different explanations have been put forward. Naturally the first is that the prairie market is waiting till lumber hits the bottom and prices are firm, whether at a higher basis than now or not, would not matter. Some there are, who say that the belief is held in certain quarters on the prairie that the bottom has not yet been struck. The answer to that is the firm attitude of coast and mounain mills in curtailing output and holding stock in their yard rather than bid for business. Those who are in touch with the wheat market, of which Winnipeg is the western centre, think that one big factor is the stand many grain-growers have taken on the present price of wheat and their decision to hold their grain till the price is better than it now is. It is a matter of common knowledge that both the wheat market and the live stock market are lower than for some seasons past.

Then there is another somewhat different explanation of the slow buying from the prairies, which has to do with liquidation. It is stated that many who are selling their grain, are practically forced to do so, as banks, implement men and others want a clean-up which has been postponed from season to season in many cases.

Order Now for Early Deliveries.

Another point of a financial nature is worth taking into consideration in any study of market conditions in the west. The banks assemble all available liquid capital and concentrate it for the purpose of handling the western wheat crop every fall. If that crop moves slowly—and it has from one cause and another—then it is longer before the money is freed and returned to other channels. Some people, who have had the chance to observe matters on the prairies at close quarters, are pessimistic enough to think that lumber buying there will not be at all liberal until another crop is assured, which would postpone the revival of the prairie market until well into next midsummer. However, the majority look to some activity right after the new year, with acceleration as the season advances, and even expect that with production reduced this winter, deliveries and shipments will not be as rapid as buyers will want a few months hence. The sound advice commonly given is "Order now," if you wish prompt filling of specifications and early deliveries.

With the mills of the Pacific Coast states shut down to a larger extent than those in the Coast section of B. C., the manufacturers here do not look for much business with U. S. points. The situation is vastly different from this time last year, when the lumber buyers from a hundred different concerns in all parts of the eastern and middle-western states were scouring this province trying to buy up all the lumber they could, and paying premium prices. If there were to be one such broker's representative show his head, not a coast mill in B. C. would miss the chance to join in the chase. He would be swamped with offers of lumber, and he would have to pay no premium.

General Shutting Down of Logging.

Prices to-day obtainable are about forty per cent. less than the figures commonly secured last winter and spring. There is this difference, that many mills will not accept the present price basis. It is a good indication of the curtailment of the mill output when the logging industry has practically decided on a general shutdown. It is given as practically assured that there will be no camps operating by Christmas. Normal strength of logging camp employees on the coast is placed at near 5,000. To-day there are nearly if not quite 3,000 of these men now out of the woods, and the remainder will gradually be reduced. Most camps will remain closed until February at least. Even those operations which have been carried on to cut spruce for the pulp mills are closing, for the pulp companies now have logs enough to run for six months and do not want to buy any more.

It is somewhat difficult to give an accurate estimate of the curtailment of lumber mill activities. Possibly not more than 30 per cent. of the coast mills have closed completely as yet. But many are only running half to three-quarters capacity, and with hardly an exception there is no night shift operating. There will be further curtailment right along, and if the export orders not yet completed were cleaned up, the coast mills would be shut down almost as completely as the mountain mills. In the Mountain district, the mills in most cases only run during the summer season any way. But this year they closed much earlier than usual. Most of them have fairly heavy yard stocks, and few of them plan big operations in the woods this winter. Most of them, like the coast mills, can log in the open season.

Western Ontario Dealers Discuss Outlook

Trade is Adopting Conservative Attitude but Takes Hopeful View of Future—Indications Point to Increased Demand and Active Building in Spring

A hummer in every respect was the special meeting of the Southwestern Ontario Retail Lumber Dealers' Association, which was held at Chatham recently and attended by thirty-five representative dealers from all over the district, the members coming from St. Thomas, London, Windsor, Sarnia, Glencoe, Dresden, Ridgetown, Alvinston, Walkerville, Leamington, Comber, Blenheim and other points.

In the last issue of the "Canada Lumberman" a summary was given of what took place at the important conference, and it was announced that a more complete reference would be made to the deliberations. The points brought out in the discussion were timely and helpful and will be read with interest.

It is the intention of the S. W. R. L. D. A. to meet more frequently in the future, the suggestion being made that the members should come together once every two months, and that a subsidiary district might be organized by the London, St. Thomas and Aylmer men, who could possibly gather, at least, once a month to discuss purely local problems.

The Southwestern Ontario Retail Lumber Dealers' Association was the first body of its kind organized in the province some eight or nine years ago, and embraces in its ranks practically all the retail lumbermen of that portion of Ontario.

J. C. Scofield, of Windsor, said that any commodity being sold to-day for less than it can be produced was not in his opinion a bad buy. From what he could learn it would not be a gamble to pick up such stock. In the opinion of a number of leading authorities across the line, 1921 would be a banner building year and retailers should not allow their stock to get so low as to be caught napping. Railway companies were now buying freely supplies for new equipment, and the recent advances in freight rates had enabled them to do it. "My experience," added Mr. Scofield, "is that when railway people start purchasing it means good times ahead and when they cancel, why look out!" Yellow pine was being offered at very low prices at present and just now B. C. fir could not compete. The freight rate on B. C. fir averaged from $26 to $31 while, on yellow pine, it was about $16. With $25 logs, the cost of the freight and the expense of operation, B. C. manufacturers could not at present contend with the southern product. Mr. Scofield said that, generally speaking, the large mills were holding what stock they had in yellow pine and it was the small mills which were making the special offers.

No One Overstocked in White Pine.

C. H. Belton, of Sarnia, stated that he had returned from a hunting trip near Sudbury and a Midland company were conducting a very expensive operation there on a large scale, paying high wages, and unless the firm realized a good price for the white pine which they were taking out, they stood to take a severe loss. His opinion was that no one was overstocked in white pine which had been holding up well. He knew of one Ontario firm which had lately received an order for twenty carloads by cable from the Old Country and, while this could not be regarded as a large consignment, still it was looked upon as an optimistic sign in regard to the trend of the market. Wholesale firms to-day were selling their lumber at a close margin. Mr. Belton could not see where lumber was going to come down very much if any in price. The lumber operators of Ontario were being closely checked up by the Government of the province in their log scales. which influence would be a factor in keeping up prices as they would not get off with such lenient measurements as in the past. Mr. Belton added that he did not expect that lumber would get back to where it was in price and was not apprehensive of future values. White pine was holding its own and with a reasonable demand would be scarce.

J. C. Wallace, of London, said that he did not think that jack pine or B. C. fir would take the place of white pine for window frames or door frames. There was a prejudice in London against the former woods for outside work. There would be always a demand for white pine for frames. Mr. Wallace referred to the growing costs of producing lumber. Labor was inefficient and restless—much more so than in the old days. The sources of supply were constantly being further and further removed, the hauls and driving were harder, and it was more difficult to get in supplies, all adding to the increased cost of operation. The law of supply and demand would regulate quotations in the future as in the past and as to the price of lumber all would depend on demand for the coming season. From present prospects there would be much building activity in London during 1921 and business should be good there for the retail lumberman.

People Beginning to Ask Questions.

W. A. Hadley, of Chatham, said that the automobile business affected the lumber trade. The firms making motor vehicles were very quiet at present, being loaded up with cars and well stocked with lumber. Furniture factories and phonograph plants were also running on low production and were not using much lumber. White pine, in his opinion, could not hold up in price much longer if the manufacturers could not get the sale. If other woods came down so would white pine. He did not think from what he could learn that the automobile business would improve much for the next six months. Retail lumbermen would have to get down to a proper basis of doing business. Many industrial concerns were closing down or reorganizing their plants and were hiring back their men for less money, which would bring down the cost of production. Prices of food stuffs were tumbling, especially sugar. In his opinion, people were not going to pay the prices that had been asked for general products and were beginning to ask questions. If prices in other lines came down so much the better for the lumberman.

President Sanders touched upon the decrease in building lately across the line and, in the matter of lumber, he remarked that the big fellow was holding on to his stock but the little fellow had to turn it over and pocket the loss. Unless a man had lots of capital he was not locking it up in stocks to any extent.

E. C. Russell, of Walkerville, in discussing the use of white pine, said he had very little of it in his yard. For door and window frames he was using Sitka spruce and cypress to a large extent and with satisfaction to himself and his customers.

Retailer Gets the Blame and Abuse.

John B. Reid, of Toronto, president of the Ontario Retail Lumbermen's Association, was invited to speak on the general situation, which he did at considerable length. He said that in the matter of lumber prices the customer got after the poor retailer and did not get after the manufacturer or the wholesaler. It was the poor retailer who got all the blame and abuse for high prices of forest products, made the least money and took the smallest profits. Mr. Reid thought a plan might be worked out by the provincial government of handling the timber as a state operation, engaging firms to do the logging and sawing at a fixed reasonable rate, and then having the product distributed direct through the retailer, who would market it at a normal profit. This would shut out the wholesaler or middleman who did not touch the stock and usually got the long end of the deal. Such a project might look as if the millenium was at hand and he had no doubt that some such reform could be worked out by the authorities.

Continuing, Mr. Reid advised the retail dealer to take a holiday now and then and not always have his nose to the grindstone. He would be further ahead in the long run by getting away from his

Some of the well groomed horses belonging to Camp No. 7 of the Eastern Lands Department, Canadian National Railways, near Foleyet, Ont.

business occasionally. His firm in Toronto had been the first to close up on Saturday afternoons and, at the end of five years, was ahead of when they kept going the full day on Saturday. All the other Toronto yards had followed suit and would not revert to the old plan under any consideration. All dealers were working to lower their stocks. He did not think it advisable to hold anything out of which they could get cost. Far better to dispose of what they had in hand and replace at lower values and the difference represented a profit,—the figure at what stock could be sold for and what it could be laid in again or replaced. Mr. Reid outlined the features of the proposed uniform order blank and terms of sale which was being prepared by the association. It would prevent cancellations on both sides and was calculated to make a man take and keep the goods that he had ordered, its use would tend to eliminate law suits and misunderstandings.

Operation of the Sales Tax

Touching upon the sales tax, Mr. Reid explained that on material manufatcured in a retailer's own plant the tax was two per cent., and on all other goods there was no levy. The tax on the manufactured commodity must be shown distinctly on the invoice. On all sales made by a manufacturer to a wholesaler one per cent. had to be collected. If sales were made by a lumber manufacturer direct to a retailer, without passing through any other hands, the levy was two per cent. on the transaction.

In regard to the statement some firms were not collecting the tax on what they manufactured on their premises but were telling customers that they themselves were assuming the tax, this was not legal. Such a course, if pursued, would doubtless lead the offender into trouble, as it was contrary to law.

In regard to latest rulings on the sales tax Mr. Reid read the following, recently sent out by the Department of Inland Revenue, Ottawa:

1. Where a manufacturer of lumber sells to a wholesaler or jobber the tax is 1 per cent.
2. Where a manufacturer sells to a retailer, either in the rough or dressed, the tax to be 2 per cent., but if to be dressed or otherwise further processed by the retailer, 1 per cent.
3. Where a wholesaler sells to another wholesaler, jobber or retailer the tax to be 1 per cent.
4. Where a retailer operates machinery for the further processing of lumber, excluding ripping, re-sawing and butting which is not regarded as manufacturing, he is regarded as a manufacturer to this extent and on the value of all such worked material must pay a tax of 2 per cent. Only 1 per cent. of this need be charged and shown on the invoice if the retailer so wishes, but he must turn over to the Government 2 per cent., thus absorbing the other 1 per cent. But where a retailer sells any portion of his stock in exactly the same condition as he received it, whether sold to a contractor or a consumer, there is no tax.
5. Where a manufacturer sells direct to a railway company or a similar organization, which buys lumber not for the purpose of barter or sale but for his own use in construction purposes, the tax to be 2 per cent.
6. Where a wholesaler sells to a railway company, tax to be 1 per cent.

Note.—All invoices covering taxable sales must show at least 1 per cent., but any tax over 1 per cent. may be absorbed by the seller and paid by him along with that collected from his customer to the Government.

Have Confidence in the Other Fellow

W. A. Hadley gave a short but impressive talk on "How can we improve the South Western Ontario Retail Lumber Dealers Association?" First, he would emphasize they must have faith in the other fellow. They must know how to figure costs and see that they get a fair return on their investment and business. The man, who was not doing this, was not honest with himself nor with his competitors. In gatherings of the nature such as the one being held men got to know one another, to recognize the benefits of co-operation and unity of interests, and, with confidence in the other fellow, good results were bound to follow. Mr. Hadley thought that meetings should be held more frequently and, at least, once every two months there should be a general session. Local men should also get together in the different centres and consider their problems, which would often result in clearing away misunderstandings and suspicion.

J. C. Scofield of Windsor spoke ably on "Millwork and Costs." He said much depended on this matter of factory costs and with men asking eighty-five to ninety cents an hour, what was going to be done? Most firms were all at sea when it came to factory costs, and as there was a wide divergence of opinion, he would like to get some definite ideas from those present on the subject. He spoke of reduction in wages that had taken place in factories across the border, particularly in the automobile line, where men were glad to get their jobs back at a much lower wages. During the war men had been very arbitrary in their demands and the question now arose, with changed conditions, are we going to be as arbitrary with our men as they were with us? Prices on all commodities were coming down and what were those who ran planing mills and factories in the wood products line going to do? There was keen competition from the catalogue and mail order houses in doors, sash, fromes, mouldings, etc., and how were these to be combatted? Factory costs showed a great deal of discrepancy in every establishment and the estimates of superintendents of plants varied greatly, all the way from fifty to one hundred per cent. The labor question and rate of wages was a live one and along with curtailment of production, should be discussed.

Will Combat Mail Order Concerns

T. C. Warwick, of Blenheim, referred to the mail order houses and instanced a case of where material was ordered from one of these firms, but had not been delivered. In the mail order concerns money had to be sent before the supplies were shipped and there was no telling when the customer would get delivery. Some complained of one point and some another, and Mr. Warwick remarked that those in his district who had done business with such organizations were far from satisfied. He had recommended to one customer who had to buy stuff from him (Warwick) owing to non delivery by a mail order house that he (the customer) should stand the firm a suit over the matter. "I thought that it would be a good advertisement for me," naively added Mr. Warwick amid laughter.

Mr. Scofield said that one Hamilton mail order house had sent out catalogues broadcast and, on his making inqiry, he found that this firm had no factory but got their supplies from whom they could get to make them—from one place and another. He thought they could overcome this proposition and easily show that they (the retail lumbermen) could meet any figures such as those named in the catalogues. No man, who had ordered a house from such concerns, ever bought a second one. One experience was enough.

After some further discussion a committee of Messrs. Wallace, Bogart, Scofield and Russell was appointed to arrange for meeting such competition and report to the members of the association.

In regard to persons who hawk around a bill and ask for competitive prices, W. A. Hadley, of Chatham, stated that when his firm were requested to send quotations out of the district they quoted, in every instance, their prices at Chatham plus the freight and forwarded a copy to the retailer in the district, showing exactly what they had done. This was sound trade ethics.

F. H. Laird, of Dresden, said that he never interfered with business in the other fellows territory and merely looked after the work in his own district.

In regard to labor it was stated that the wages of rough labor on the yards was on the average fifty cents an hour in Windsor and Walkerville. In Chatham the figure was somewhat less.

Getting Too Chummy with Wholesalers

"Can a retailer become too chummy with a wholesaler?" was the next topic taken up and was to have been dealt with by Col. Green, of St. Thomas. As he was absent on a hunting trip, consideration of the question was led off by D. J. McEachren of Alvinston. He thought that it was possible for a retailer to get too intimate with a wholesaler and instanced a case when, in the west, where he had been "stung." The feeling existed that the wholesaler was getting too much to-day out of the retailer. The former bought his lumber in large blocks, often did not see it and never handled it whereas the retailer purchased in small quantities and took all summer to sell his stock and all winter to make the collections for it.

President Reid, of Toronto, told of the work of the retail association of Ontario in seeing that wholesalers lived up to their contracts in the matter of deliveries. He referred especially to the activity of the Secretary in Toronto, who impartially investigated all reports. The result was that the wholesaler had to play fair and, if he did not, the trade knew how to treat him and his representatives. Mr. Reid stated that he had nothing against the wholesaler if he observed the rule of the game openly and honestly. He thought that a retailer should not get too intimate with any one in business. All travelers should be treated courteously and respectfully and as business men, but "cut out all the social stuff," admonished the speaker. "First get chummy and right with yourself and never mind the wholesaler."

Mr. Reid thought they should all give their sons a chance in business and encourage young blood in the lumber line. There was every reason why the boys of to-day should be afforded an opportunity to make good, and they would do so. He strongly advised his hearers to look closely after collections. In the past too much atten-

tion had been paid to the sales end and too little to getting in the money. This condition of things should be reversed.

"Do not allow any one to persuade you to buy something that you do not want, even at any price. Lean on your bank as much as possible and as little on the wholesaler as you can," he observed The speaker took up several other matters and referred to the good work of the Trade Relations Committee and the disputes which they had settled by arbitrations, thus avoiding lawsuits. He thought that certain fees should be allowed the members of the arbitration committee for their services and the time spent from their offices and business. He intended to bring this matter up at the next annual meeting of the Ontario Association in Toronto. A resolution was passed endorsing the work of the Trade Relations Committee.

In the matter of wages of mill and yard hands, teamsters and others, it was thought that, when the scale went down, notifications should be sent to others in the district so that there would be uniformity. One firm would not then be making offers to other men and the men constantly holding up the bosses for more money, the same as had been done in numerous centres during the war. Then employees travelled from one yard to another, accepting the highest bids and arousing discontentment and unrest.

A hearty vote of thanks was tendered to President Reid, of Toronto, for his kindness in attending the gathering, being moved by W. A. Hadley, of Chatham, and seconded by J. C. Scofield, of Windsor.

Canada Must Use and Not Abuse Its Forests

"We Have Reached Point where if we do Not Take Some Steps for Future of Wood Supply, we will be in Difficulties in Few Years," Declares Speaker

A stirring and thoughtful address was delivered recently before the Canadian Club, Montreal, by Ellwood Wilson, chief Forester for the Laurentide Co., Grand Mere, Que., on the "Conservation of Canadian Forests." He emphasized the proper utilization of the vast natural resources of the Dominion and said that public interest was needed so that the great wooded areas might be safeguarded.

Mr. Wilson said he wanted it clearly understood that he was not in favor of closing up forest areas. In New York state a million acres had been closed up so firmly that no one could even cut a stick there. The result was, trees were rotting.

The forests were more fundamental than agriculture, forestry being really the mother of agriculture, and he reminded his audience that our forefathers had been much interested in forests and spent most of their time in them. Later, people had emerged from the forests and tilled the soil. Wood is being needed in greater quantities than ever, despite steel and cement constructions, and since paper had been made from wood the latter had become of still greater importance. Without paper there could be no civilization, and without wood there could be no paper. There was talk of making paper out of corn stalks and various other articles, but it could hardly be said that such materials could replace wood for paper for they could not be gathered in such handy packages as wood.

"We do not want the spirit of 'Woodman spare that tree,' to prevail, said Mr. Wilson. "Some trees are wanted for their beauty, but the forest exists for the purpose of being cut. We want to cut them as fast as we can utilize them, providing however, that we see to their replacement. The forest is like a crop. The great difficulty has been that we have not in Canada, or in the United States, treated our forests as a crop, but as if they were mines from which we could help ourselves, but the sad thing is that we thought those mines inexhaustible."

Forest Resources Will Last Fifty Years

Mr. Wilson said that there was far from anything like an accurate knowledge of the extent of Canadian forestry resources, surveys not having been made, and maps consequently lacking, but from what was known approximately, as far as can be gathered, it would appear the resources would last for fifty years on the present basis of consumption, but, he added, the increase in consumption has been at the rate of 10 per cent. per year, "and so we can see that it is high time something was done for perpetuating and replacing of this great natural resource."

It was known now that there is a northern limit to the growth of trees, and that limit had been approached very closely. Mr. Wilson struck an optomistic note when he said that the aeroplane meant that surveys would now be possble, one aeroplane doing more in that direction in one day than four parties of ten men each could do in one month under the old system, and there is now no longer an excuse for ignorance.

All the governments, federal and provincial, are responsible for obtaining proper figures. Unfortunately it happened that governments had been more concerned in Canada, though less than in the United States with getting revenue from forests than with doing the work of protection and surveys, as for example. Quebec which obtained a revenue of three millions a year from its forests spent only $250,000 a year, just enough to cover administration, and a certain amount of forestry protection against fires. This was not the fault of the Government. The fault was with the people, who are responsible as individuals for the interest which a government will take in the protection of forests and in natural resources generally.

"If you do not take any interest in this question, but are simply satisfied to think of it in a sentimental way or wish to blame some one else, you are not getting anywhere. It is for all citizens to see that all natural resources are properly administered."

Interest Should Be More Than Academic

Much progress has been made in the last ten years by the Gouin administration, more than had ever been hoped for. The situation in New Brunswick is splendid, added Mr. Wilson, while the province of Ontario lies very far behind. The province of British Columbia is right up in the van. The Dominion Government is still engaged in administering forest lands and doing very little else. The great difficulty with forestry services had been that they were tied to administration work instead of doing something constructive, and the only thing was to use influence with governments to see to it that proper care is taken of natural resources.

Mr. Wilson said that timber and lumber companies have also responsibility in handing down the natural resources to the next generation and he would say of pulp and paper companies that they accepted their responsibilities and thought beyond the interests of present stockholders of companies. These companies are the salvation of the forestry resources of Canada today, and have acted in a broad-minded and liberal way to see that the forestry resources are properly utilized, and some have started large forest nurseries. Two companies plant one and a half trees for every one tree they cut down, three other companies have followed suit. There was one handicap encountered. While companies were up to the minute in scientific management in the forests. There was an old superstition that men brought up in the woods are the only ones who can handle the operations there. This was an idea that would die away, and forestry work would be done under the direction of competent engineers. Here again, said Mr. Wilson, the aeroplane is to play a great part, and remove the disabilities that great distances bring.

The present crisis as to forestry resources had been experienced in Europe. There is a disinclination in the United States, but less so in Canada, he was glad to say, in following the experience of Europe.

"We have reached the point where if we do not take some steps for the future of the wood supply of this country, we will be in great difficulties in a few years," emphasized Mr. Wilson. He had just returned from attending a meeting of the American Association of paper men, and found that the situation there was such that mills in the East will have to close in fifteen years, because of lack of wood.

Should Not Give Away Raw Materials

"They are looking to Canada to supply that wood, and we cannot give it to them. We want it ourselves. (Applause). We will give them all the manufactured material they want, but cannot give them the raw material, and I hope that the governments will not change their attitude in this regard."

Talking of fire loss, Mr. Wilson estimated that one-third of forest areas have been destroyed in this way. There is now good protection in Quebec and New Brunswick, and in some sections of Quebec covered by the forest protective associations the loss has been reduced to one one-hundredth part of one per cent. of loss, but there is still need of going forward. One of the great offenders, said Mr. Wilson, is the Canadian National Railway system. Not coming under the jurisdiction of the Dominion Board of Railway Commissioners they were not affected by the regulations of the board as to fire pro-

tection, and the forestry men have more difficulty with the C. N. R. than with any other agency. It was a strange thing that while one branch of the Government is anxious about conservation another branch of the Government is burning up the forests. It was true, added Mr. Wilson, that some sections of the Government system tried everything to co-operate to prevent forest fires, but all did not and as an instance he said that one locomotive last year had started 46 fires in one day. The only way to remedy such a situation was to arouse public opinion.

As to danger to forests from insect pests, Mr. Wilson said this matter was rapidly being studied, and it was hoped that before long there would be means to combat this evil.

Progressive Eastern Lumberman

J. G. Chalifour, Quebec, P. Q.

J. George Chalifour, of Quebec, who deals extensively in wholesale lumber and pulpwoods, is "to the manor born," as our good friend, Wm. Shakespeare, would phrase it. He is the son of a lumberman who spent all his life in this line. After attending school the Commercial Academy in Quebec and latterly St. Dunstan's College, Charlottetown, he went to work for his father, O. Chalifour. Shortly after the son became identified with the business. he had the misfortune to lose his father, and the retail lumber enterprise has since been conducted under the name of O. Chalifour, Inc. The subject of this reference worked for the firm four years, after which he started in business for himself at the age of twenty-one. This was four years ago. He was about the youngest man to launch in the wholesale lumber line without any outside help or association that the province of Quebec has ever known.

Mr. Chalifour has built up a large connection in spruce, cedar and birch, spruce timber, piling, spars, knees and shingles. He devotes his attention particularly to spruce and pine lumber and cedar shingles, although he disposes of quite a lot of Coast stock.

Mr. Chalifour also handles spruce pulpwood, which he ships mostly to the United States. He owns limits in the district of Lake Beauport, about twelve miles from Quebec city, where he has been operating for the last three years. Apart from his own business, he is interested in the firm of O. Chalifour, Inc., of which he is vice-president.

Lumber Retailers Assessed Too High

Writing the "Canada Lumberman" on the business assessment act of Ontario regarding the levying of taxes for local municipal purposes, a leading retail lumber dealer of Ontario says: The present assessment act dealing with planing mills and lumber yards is that your assessment for a planing mill is 60 per cent. of amount of assessment on land and building and 50 per cent. on a retail lumber yard.

We understand that when this was framed the percentage business assessment was a substitute for the tax on stock. As this applies in all lines it results in an unfairness to the lumber dealers as lumber takes a lot of space to store and is at a higher rate than other lines of retail merchandise which carry a 35 per cent. rate.

A jeweller, for instance, could carry twenty thousand dollars' worth of stock in a room 10 x 12, where a planing mill would require a large building and yardage space to accommodate stock of an equal value.

It is the hope of the writer that when the present provincial parliament amends the assessment act that the Ontario Retail Lumber Dealers' Association will present their case to the authorities for consideration.

Hon. H. C. Nixon, provincial secretary of Ontario, in discussing the business assessment tax, has given some information along that line, which should prove of interest to those engaged in the lumber business. It is as follows:—

"The business assessment of a coal, wood or lumber dealer is 50 per cent. of the assessed value of the premises occupied by him, but in cities of 100,000 the business assessment of coal dealers is only 30 per cent. of the assessed value. The business assessment of a wholesale merchant is 75 per cent., and of a manufacturer 60 per cent."

Bids for English River Concession

The Department of Lands and Forests of the Ontario Government is advertising for tenders for the English river pulpwood and timber limits. The tenders will be received up to December 18. The successful tenderer must be prepared to establish a saw mill at Kenora and have it in operation in 1921. A 50-ton pulp mill must also be established at Kenora to be increased eventually to a 200-ton mill. All the forest products in the area of the English River limits are to be sold and the timber must be manufactured into paper, lumber, ties, etc., at Kenora. Commenting upon the advertisement for tenders a Fort Frances paper says:

In view of the fact that this limit comprises some 3,000 square miles of timber, by far the most valuable in Northwestern Ontario, one would naturally suppose that care would be taken so as to obtain the maximum price for this timber asset for the province. The terms on which bidders are asked to prepare tenders reveal a situation that must bring consternation to the people of the province.

The man who would hope to intelligently place a bid on this timber is required to inspect it, arrange for the securing of a site for a saw mill at Kenora, negotiate for booming grounds, and privileges, for the saw mill, before Dec. 18th, or a period of less than 30 days. Allowing one week to get a cruising outfit into the limits which is difficult at this time of the year, one week to return and make report on timber leaves a very few days to inspect 3,000 square miles of timber. So utterly absurd as to be ridiculous, to say nothing of the time that is necessary to make arrangements for the mill, booming rights, financing, etc. On the other hand the Backus interests have already an established saw mill at Kenora. They have, we are informed, had cruisers on this limit for months past and thus have an enormous advantage over any outside industrial concern that would hope to enter this field.

Charged With Stealing Sunken Logs

Believing that the accused had not revealed criminal intent to steal wood from the E. B. Eddy Co., Magistrate Millar of Hull, Que., suspended sentence in the case of Charles Gaudreau of Tetreauville. Gaudeau was accused by the company of having stolen logs belonging to them, from "on or in the Ottawa River." The accused had nearly 50 cords of wood piled on his premises and this was ordered seized.

In giving his evidence, Mr. Gaudeau declared that he had dug up the logs from the bottom of the river. He did not think he was committing a breach of the law in taking the sunken wood. Gaudeau's contention was that the wood being "water-logged" was of no value to any company, and deemed he had the right to salvage it and take it for his personal use.

However, the logs bore the brand of the E. B. Eddy Co., Ltd., and the court pointed that the law forbade taking such logs from "in or on the river." In view of the frank evidence of the accused and the apparent lack of criminal intent to steal, Magistrate Millar concluded that he would find the accused technically guilty, but would suspend sentence.

Southern Hardwoods for Railway Ties

Owing to the unprecedented levels to which prices of railroad cross-ties have risen in the United States, the Pennsylvania Railroad has decided to investigate the adaptability of the hard woods of Central and South America for this purpose. Inquiries have been started along several lines, not only to ascertain how much more cheaply ties, or the material for ties, can be purchased in those countries, but also to investigate the question of the longer life of ties made from the Southern hard woods, as compared with those made from the North American native woods heretofore chiefly used. Under normal conditions the Pennsylvania Railroad system uses from five million to six million cross-ties annually. White oak, the most desirable North American wood for this purpose, is becoming rapidly scarcer. The other available woods in Uncle Sam's domain have a short life as ties, unless creosoted, which adds materially to their cost. The average net cost of railroad ties ready for placing in the roadbed has risen it is said in the United States fully 100 per cent. since the beginning of the war.

In the face of the threatened wood and paper famine of the not far distant future the American Forestry Association is taking the lead in a united campaign to adopt a national policy of forest preservation, which will be outlined in a measure to be presented to Congress at the forthcoming session.

"Your local trade is going to have just exactly as much respect for your business as you demonstrate that you have by the way you keep your place of business looking. No one on earth ever respected a drab, dreary, ill-kept lumber yard—not even the owner.

"On the Square" in Selling Shingles

By K. M. Brown, Toronto, Ontario.

K. M. Brown, Toronto

With considerable interest have I noted the discussion regarding the "square" packing of red cedar shingles, which appeared in the October 15th and Nov. 1st issues of the "Canada Lumberman." As a representative of a large company whose entire output of cedar shingles is packed by the square I have an individual interest in trying to acquaint those who constitute "the trade" with the merits of the new sales unit and the reasons for its adoption.

The majority of dealers will recall that there was once a time when they placed orders for red cedar shingles without being certain of just what they were going to get. Each and every mill had its own brands, its own grades and its own methods of making shingles. Absolute lack of uniformity in the manufacture, grading and packing of shingles brought on a condition bordering on chaos. The dealer might order the same grade as he had previously bought, yet there might be a decided variance in the quality of the respective shipments.

About this time a group of shingle manufacturers possessed of vision awoke to the realization that the troubles of their business were occasioned by lack of intelligent organization. The Rite-Grade Association was formed and the grades of red cedar shingles were standardized. The trademark of this association was installed as an inspection mark upon each bundle of shingles. The association instituted a national advertising campaign which was of inestimable benefit to the shingle producer and the retail dealer.

Gradually order replaced chaos. These men had replaced an uncertain commodity with one that was dependable and their guarantee of quality stood behind every bundle. They had rendered a great service to the industry.

Known Quantity and Known Quality

In December of last year, this same Association, with a membership considerably enlarged, decided to guarantee to the trade the quantity as well as the quality of its products. They did this because they believed that a known quantity was just as desirable for the industry as was a known quality.

They therefore determined that, after April, 1920, all mills using the Rite-Grade trade-mark must pack their products by the square. Under this unit four bundles of shingles are absolutely guaranteed to cover 100 square feet of surface when laid 4½ in. to the weather. Haphazard estimating and guessing as to the covering capacity is eliminated. You figure the surface to be covered in square feet. Why should not the material with which it is to be covered be figured on the same basis ? Is anything more logical ?

If the shingles are to be laid 5 in. to the weather you merely deduct ten per cent. from the number of "squares" required; if laid 4 in. to the weather, it is only necessary to add ten per cent. to the number of "squares." Could anything be simpler for estimating purposes? The big point is that this estimate is not just approximate, it is exact.

Incidentally this guarantee of quantity is a double guarantee of quality, for if all the shingles contained in the "square" were not up to grade they would not lay out the square. It is not possible for any mill making "square-packed" shingles to ship bundles which are short in count or shingles which are below grade. The Rite-Grade Association guarantees the covering capacity of these shingles and the mills must make proper restitution if their product does not lay out as represented Is this not a strong argument in favor of the new unit from a retail view-point ?

All competitive roofings are marketed by the square and it was thought desirable to place shingles in direct comparison with these substitute materials by selling on the same unit. Thus the many explanations needed to clarify the relative difference in covering capacity between "one thousand" shingles and a "square" of roofing would be eliminated.

Prices Per Square Foot the Same

In some sections of Ontario we have met a peculiar condition in that three bundles of shingles, thousand packed, are being sold as a "square" if laid 5 in. to the weather. The dealers say that the price to the trade on these three bunches of thousand packing is lower than the price of four bunches of "square packed" would be. So it is, but the difference in price is exactly proportionate to the difference in covering capacity. It can readily be shown that four bunches of "square packed" laid 5 in. to the weather will cover just one-ninth more surface than three bunches of thousand packed, and it can as easily be shown that the price of the "square packed" is just one-ninth more than that of the thousand packing. Therefore, the prices per square foot of covering capacity are identical.

Further, three bunches of thousand packed will not cover a "square" when laid 5 in. the weather. They will only cover 96 square feet, so the dealer must add a bundle or two to the number of so called "squares" required. Is not this mis-named "square" a hit or miss unit which should be consigned to the scrap-heap in favor of a guaranteed square ? Would this not be in the interest of better merchandising ?

The introduction of the square may necessitate a certain amount of explanation to your trade temporarily. We are convinced that it must also eventually increase your shingle sales. We went to a considerable expense in changing our packing equipment to suit the new unit, solely because we believed then, as now, that our sales would eventually grow in direct proportion to the increase in retail sales. The added turnover would more than justify the expense and inconvenience subsequent to the change.

Blazing the Pathway of Progress

Any big forward movement in any line of endeavor was instituted by those who could see beyond the immediate present; someone who visualized better things than those of the moment. Big things, for which the present day business world is justly thankful, were not accomplished without some inconvenience and effort on the part of those men who instituted the movement; men who fought hard to overcome each obstacle; sincere in their conviction that a change in the order of things must prove beneficial to all.

To summarize briefly, we offer a guaranteed quantity; a product backed by a double guarantee of quality. If you are selling by the bunch or by the thousand your price to the trade is lowered; if three bunches of thousand packing to the "square" your price remains relatively identical. We offer a unit which is readily understood by your trade; a unit which precludes any mistakes in compiling estimates; a unit which consigns to the shelf the old hit or miss method of arriving at quantities. It makes for greater merchandising efficiency. Do not its merits warrant an honest trial by the trade ?

No Cold Feet—No Cheap Lumber

November 22, 1920.

Canada Lumberman,
Toronto, Ont.

Sirs,—Enclosed find $2.00 for Lumberman for another year. I find your paper splendid; in fact, I do not know how any lumberman can do without it. I have been watching your last numbers very closely, as there is so much unrest in every line of business that I see some lumbermen have got cold feet. However, I am getting out a stock of hardwood and a quantity of ties, and I think the people who look for cheap lumber next spring will be as much surprised as the Irishman who fell off the church roof and landed in a hammock.

Yours very truly,
C. H. Jermey.

Bass Lake Sawmills,
R. R. No. 2, Orillia, Ont.

Chaotic State in the Lumber Arena

Leading Representative Thinks it Will Not Take Very Big Business to Bring Prices Back

A calm, impartial and comprehensive summing up of the general lumber situation in British Columbia and the outlook for 1921 is furnished in a recent letter from a leading representative of the industry on the Pacific Coast to Hugh A. Rose, of Rose-McLaurin, Limited, wholesale lumbermen, Toronto. The communication is as follows:

I had intended to write you before this and endeavor to give some idea of conditions at the Coast but hesitated as they were changing so rapidly and were in such a demoralized state that we hoped something would happen to steady things. The situation is chaotic. There seems to be a fair amount of special cutting business of one sort and another such as export ties and merchantable, common timber for constructional purposes, railway car material, etc., but unfortunately we are only able to put 35 to 50 per cent. of the log into these orders. The balance made up of regular yard and shed items, has to be put into stock as there are practically no orders coming in for stock material. At least, that is our experience and we understand from conversation we have had with outher operators that our experience is general. The result is that the price on stock items has got down to a point which is below cost.

The mills in most cases realize that it is folly to fill our yards up with lumber manufactured under high cost conditions. Unfortunately logs remain very high and the logging operations are loath to make any reductions, stating that they will have to get lower wages before they can do anything in that direction, and in order to get lower wages, will have to close down for a time to get the men in the proper frame of mind to accept the reductions. There are at least 70 per cent. of them planning on shutting down this month. This will have the tendency to create a shortage of logs and strengthen the price of that commodity temporarily, at least, and will result, I believe, in a number of mills going down. Already there are several mills entirely closed down and several have shut down one side or curtailed their production in some way. Others, (amongst whom we are) who have a little export and special cutting business to complete, will also close down until conditions are sufficiently improved to warrant them resuming operations. It would seem as though the present conditions cannot last for long unless we are to have a very general depression the world over, as practically every lumber market is almost denuded of stock.

In the case of the United Kingdom, we continue to receive some business and numerous enquiries for railway ties, something we never contemplated shipping to that market on account of its proximity to the Baltic and to southern pine, by comparison to the West Coast. We hear Greece and Italy are coming into the market shortly for a large quantity of ties and understand that the Baltic is pretty well filled up with business of this nature. We have already had an enquiry for 30 million feet from Egypt and India is particularly up against it for "sleepers," as they are called there. That is only one item; the same condition exists to a certain extent in general stock.

Australia we hear is very short, but is delaying buying just as long as possible, hoping for lower prices and lower freight rates. On our own continent the railway companies have been neglecting their roads and must do a lot of renewing very shortly in the way of ties and wooden bridges on branch lines and in the way of equipment. There should also be a lot of house building if the house shortage is nearly as bad as the newspapers indicate, and it must be bad, as there has been comparatively little building during the past six or seven years, during which time the population has been steadily increasing.

Se we are inclined to be a little optimistic as to the future. When this business will commence, it is difficult to estimate, but we are sure of the fact that prices are now below cost of manufacture with the average mill. There are a few exceptional cases where a mill is operating under extremely favorable conditions and may be getting by to-day, but, on the average, the mills are operating at a loss.

We feel reasonably confident that it will not take a very big volume of business to bring the price back to a point where we can, at least, get by, that is, if the mills do not get very much overloaded with stock before they close down; in the latter case it will, of course, take that much longer, but it is bound to come.

There is, of course, the possibility that costs will come down somewhat, and while lower wages will naturally reduce the cost of operating to some extent, we must keep in mind too that logging conditions are getting worse each year,—that is, we are going further back into the woods for our timber and going further north, both of which is increasing the cost of the log and is making the stumpage nearer at hand that much more valuable.

As a matter of fact there is just one real thing for the lumber merchant to work with head and hand to secure, and that is a following of satisfied customers.

Canada Creosoting Co. Buys More Plants

Creosoting plants at Transcona, Man., and Sydney, N.S., have been sold to Canada Creosoting Company, Ltd., of Toronto, by Dominion Tar & Chemical Co., Ltd. The latter organization has decided to specialize in the production of creosote oils and other chemical products, and will concentrate sales efforts on the tar paving and roofing lines. Since the principle interests in the Dominion Tar and Chemical Co. have acquired a share in the Canada Creosoting Co., the two organizations will pursue a harmonious policy in furthering the use of creosote oils for the preservation of structural timbers. Canada Creosoting Co. will now operate four plants at Trenton, Ont., Transcona, Man., Sudbury and Sydney, N.S.

The process of creosoting railway ties, telegraph and telephone poles, paving blocks and all lumber used in industrial plant construction that is exposed to extreme moisture, has become standardized in recent years. The various railway and radial companies, telegraph and telephone companies have large orders placed with the creosoting company.

The plant that is now under construction at Sudbury will have a capacity for the creosoting of 2,100,000 tons per annum, and it will be used exclusively by the C. P. R. It is anticipated that the new plant will be in operation within six or seven months.

Dismiss Appeal in Lumber Case

In the Supreme Court, Ottawa, the Bathurst Lumber Co., of Bathurst, N.B., recently won a case in Bathurst Lumber Co. vs. Harris. It appears that the appellants drove logs down a river past the respondent's farm. The latter was indebted to appellants on a note and account, and agreed to cut 400,000 feet of lumber on his own land and pile it on the bank of the river. He delivered 90,000 feet only, and finally the appellants took action for their debt, and the respondent made counter claims for damages to his farm by the flooding of the rived by the lumber company. The appellant then amended their claim asking damages for breach of the contract to deliver 400,000 feet of lumber. The trial judge allowed the counter claim, and dismissed appellants' claim for damages, and this decision was affirmed by the Appeal Court of New Brunswick.

When Lumber was Sold Green from Saw

In 1879 and there abouts the marketing of lumber in Chicago was conducted in a very different way from what it is to-day, said Mr. Edward Hines in a recent address before the National Association of Purchasing Agents in Chicago. Mr. Hines speaks from personal experience, having been employed in 1879 in the lumber market of the city, and he recalls having seen in one day at that time as many as 135 vessels loaded with lumber tied along the Chicago River awaiting buyers.

In those days the lumber was not stored and sorted into grades, lengths, widths, etc., ready for immediate consumption and marketed direct from the mill to the retail dealer and consumer, as it is now, but was manufactured all sizes and grades and thus shipped green from the saw on what were known as lumber schooners. Later small steam schooners were used, carrying from 150,000 to 350,000 feet and even 1,000,000 feet. This lumber was transported from various lake points to Chicago and was there placed in the hands of commission men to be practically auctioned off by them to the highest bidder from the various lumber yard dealers located along the river. These dealers at one time numbered nearly one hundred.

When a trade for the shipment was made, local inspectors were put upon the cargo to measure the lumber as it was unloaded over the side of the boat on to the dock and later the proceeds were sent to the mill man, less commission for the sale.

Compare this old-fashioned method of marketing, says Mr. Hines, with the present up-to-date methods of piling and sorting everything at the mill into grades, widths, lengths, etc., and marketing direct.

Million Weddings and 70,000 New Homes

One million weddings were celebrated in the United States in 1919, but only 70,000 new homes were erected—400,000 short of the actual needs. In 1890 an average of 110.05 families occupied each 100 homes. To-day there are 125 families for each 100 homes and no relief is in sight. With a conservative estimate of 27,900,000 families in the United States by 1925, at least 500,000 homes must be built and then the building programme would be on a small scale. At these figures the country would only have 129.06 families for each 100 homes.

If something is not done to remedy the situation by 1926, with the increasing number of families, 2,200,000 dwellings will be necessary. The erection of 3,400,000 homes by 1926 will be necessary if the country returns to pre-war conditions of 115 families for each 100 homes.

In certain cities in New York state the shortage of homes is so great that parents, who have searched in vain for new quarters are, as a last resort, seeking to place their children in institutions or boarding houses.

Getting Out the Timber in Ontario Highlands

Making Better Use of the Labor Available and Handling More Logs—Eastern Adaptation of "High Lead" System hich is Working Splendidly

By C. H. Grover.

Up in the Highlands of Old Ontario, on the dividing line between the watersheds of the Ottawa Valley and the St. Lawrence Valley, there is a goodly bit of standing timber which has been untouched by lumbermen for many years, owing to its remoteness from railway facilities. Years ago an attempt was made to clean up this section, and many logs were taken out and floated down to the distant Ottawa, but for some reason the work was abandoned and the region left to the deer, the bear, the wolf, the hunter and the occasional settler and camper.

A good stand of second growth timber has arisen since the old lumbering days, and in the territory untouched by the lumbermen of that date, or by subsequent fires, the original timber has grown larger and more valuable.

Owing to the present scarcity of lumber and the prevailing high prices, the eyes of many lumbermen have been turned toward this "Height of land" with its tempting stand of money-making timber. Various timber surveys have been made, with the result that one company made a beginning on its limit this past summer, and two or three other companies are planning to start cutting in the next few months, despite the scarcity of labor and the high transportation

(5) Log on its arrival at the "spar tree"

(6) Tongs fastened on centre of a log.

charges that are inevitable owing to the remoteness of the timber from the railroad, and the impossibility of getting a road into the hills at a reasonable cost.

It was the writer's privilege this summer to see a little of the preliminary work done during the warm weather by the company which has already started cutting. Owing to the shortage of labor, little could be done, but it was illuminating and instructive to see how much was done and how difficulties were overcome in spite of labor handicaps and the transportation problem.

Arrived With Gang of One Man.

First of all a foreman was sent in, presumably with a gang of men, but after a diligent search for help this foreman arrived on the job somewhere around the 1st of July with a "gang" numbering just one man. But he is a resourceful man, this same foreman, quiet of tongue, slow-speaking, unassuming, but with plenty of pluck, good horse sense and knowledge of lumbering ways and methods. He knows his work, and it is a treat to see him handle the tools of his trade.

This foreman and his "gang" of one man put up their tents, arranged for temporary board with a near-by settler, and bravely started in to work—only two axes to cut down the primitive forest, where maples and other hard woods were found two feet and over in diameter. It was a tremendous task for two men, but they did their best.

It had been decided to float the logs down stream about twelve miles and there erect a saw-mill where the manufactured lumber, boards, pulpwood, etc., could be transported without much difficulty to the railroad. Everything marketable was to be cut, including white pine, red pine, hemlock, spruce, balsam, fir, maple, birch, oak, poplar, etc. For some seven or eight miles of this distance the logs would have to be rafted and towed over the deep waters of a lake. Then the raft would have to be broken up and the logs floated loose down to the mill site. As the waters of this lake are very deep, any

(7) Two men guiding log as it is carried to the skidway

logs lost in transit would be lost forever. It would be impossible to locate and recover them. This makes the floating of the hardwoods an exceedingly difficult and risky undertaking.

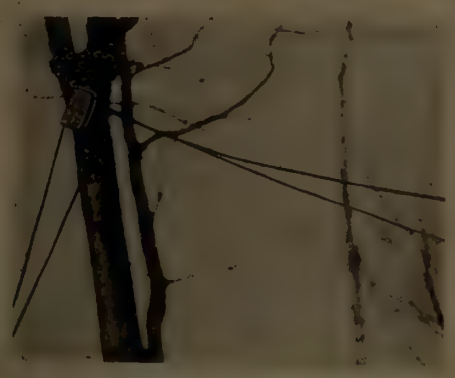
Keeping Everlastingly at the Work.

To reduce to a minimum the chances of thus losing a large portion of the valuable hardwood timber, it was decided to peel these hardwood logs as much as possible before putting them into the water. As these logs peel quite easily in the spring and early summer, but later in the season are almost impossible to peel, the first work undertaken by the foreman and his "gang" of one man was to chop down and peel as many as possible of the hardwoods while the peeling was good. Day after day they stuck to this task, felling the trees and removing strips of bark from each tree, but otherwise leaving the trees as they fell. Shorthanded as they were, no time could be spared at that season of the year for topping the trees, removing the branches or sawing the trees into logs. This would all have to be done later,

(8) Piling logs with a hoist. Only one man is required to operate the hoist.

when the peeling season was over. But as the trees fell, so they had to lie—a tangled mass of wreckage that it would be difficult and dangerous later on to untangle. Owing to the shortage of labor, this was the only feasible procedure.

The foreman expected other men to arrive on the job to increase his gang and enable him to get more work done, but in this he was disappointed. No more men came. Finally the foreman realized the impossibility of making much headway in his herculean task owing to the paucity of labor at his command. The season was passing, trees



(3) The "high lead" block or gin block and cable showing also the guy wires for supporting the tree.

(2) The machine mounted on a sleigh.

(4) Tongs fastened into end of a log.

were coming down but slowly despite their utmost endeavors. So at last he had to quit work for a time and go out to scour the country for more men. He travelled many miles with but scant success. Like the guests invited to the marriage feast in the old parable, the men all made excuses of one sort or another; but after several days of weary seeking he returned to the scene of his labors with three more men, making a total working crew of five, counting the foreman. But his troubles were not ended yet. Labor in the woods, as elsewhere, is shifty and unreliable, and it was not long until his crew was reduced to four axes.

Peeling Hardwoods and Building Camp.

With his augmented staff the foreman returned to the work of chopping and peeling the hardwoods as long as they could be peeled readily. They then set to work to cut roads, saw the trees into logs and build a permanent camp for the winter. This also proved to be a big task for the small crew, but they heroically stuck to the job, and when last seen at the end of August a group of comfortable looking frame structures were already assembled at the water's edge, and a neat skidway of logs piled close by, ready for rolling into the creek when the water should rise high enough.

It was amazing to the writer to see so much work accomplished in such a short time, and with so few men. They were earnestly hoping for a large influx of labor in the fall to carry on operations through the winter and have a large cutting of logs ready for the water in the spring. It is to be hoped they will not be disappointed in this as they have been so grievously disappointed with the labor supply all summer.

That is the biggest problem apparently confronting not only this one small camp, but all the many lumber camps scattered throughout Ontario and East. Men are scarce and unreliable. They don't want work, or perhaps they don't want that kind of work. Anyway, the shortage of labor is certainly a most serious handicap at present to the lumbering industry.

Anything, therefore, that will help in the production of lumber; anything that will help to make better use of the labor to be had; anything that will help to get out more logs and more lumber with the scanty supply of men available is of tremendous importance to the lumbermen. Many lumber companies are realizing this now and are beginning to look around for some kind of machinery that will do this work, that is, take the place of men in the woods, or so help them with their work that they can greatly increase their output.

Such machinery has been devised and is already in use in some camps, and has so far met with the hearty approval of the lumbermen who have tried it. While watching the progress of events this summer in the small camp above mentioned, and noting the difficulties encountered, simply owing to insufficient man-power, the writer could not help contrasting mentally the conditions in this camp with those of another small camp a few miles to the south, in which gasoline power had been used all last winter in order to make better use of their small supply of man-power.

Eastern Adaptation of "High Lead" System.

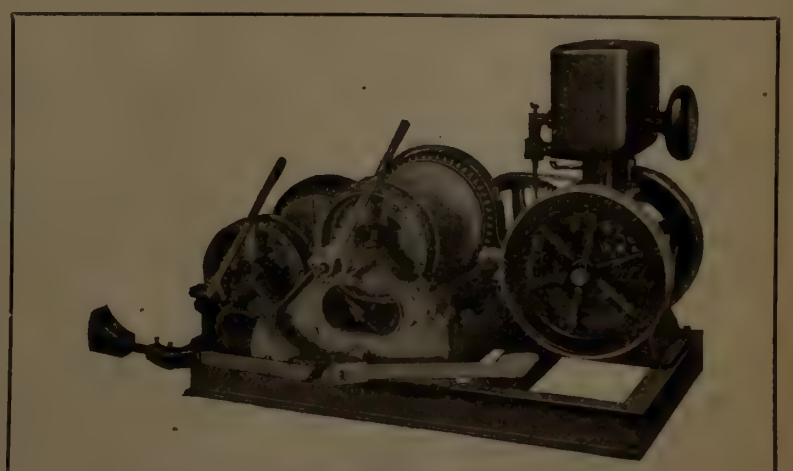
The photograph reproduced herewith (No. 1) shows the machine used by this company. It is only a small machine, as will be noted by comparison with the size of the man standing close by in some of the other illustrations, but it has plenty of power for the work, and its small size makes it easy to move around from one location to another as the logging operations proceed. This machine is used for dragging or skidding the logs from the stump to the loading "yard," and is also used for piling up the logs in skidways ready for rolling off on to the waggon or sleigh. The power and speed of this little machine may be judged from the fact that it will easily handle logs up to a ton and a quarter in weight, and at the rate of a thousand or more per day. Larger sizes of these machines are made, capable of moving much larger logs, but this small size is the one used by the firm referred to above, and which has proved perfectly satisfactory for the size of log found in that section of Eastern Ontario.

The method of skidding used by this concern is an eastern modification or adaptation of the "High Lead" system so popular in British Columbia. It has been commonly thought by many lumbermen that this high lead system is suitable for use only on the Pacific Coast, where "spar trees" can be utilized, on which it is possible to sling the block as high as 200 feet or more off the ground. Owing to this erroneous impression, so prevalent among easterners, this system has been slow to win a place among eastern lumbering methods. But that it is quite suitable for this section of the country has now been abundantly proven. In fact, it now seems to be the very best skidding method yet introduced into Ontario.

The accompanying illustrations are all reproductions of actual photographs taken in Ontario lumber camps using this method, and using the simple skidding and loading machine shown.

"Spar Tree" Only Thirty Feet High

Illustration No. 2 shows one of these machines mounted on skids or sleighs for the convenience of moving about. It is shown here in actual use, in its working position close by the foot of a "spar tree." It will be noted that the block on this "spar tree" is not more than 25



(9) One of the two drum machines for skidding and loading.

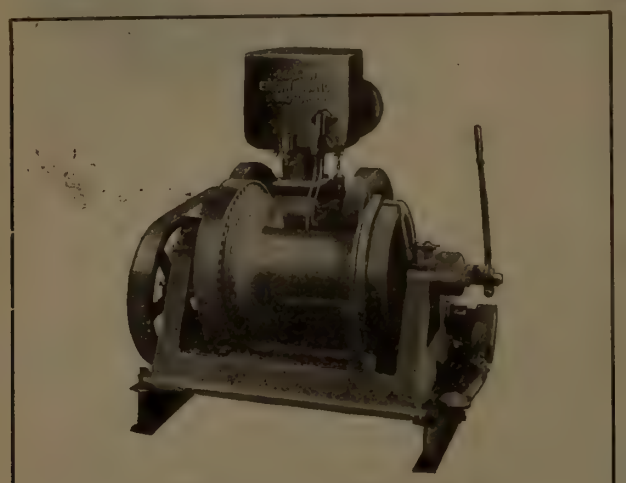
or 30 feet above the ground. Yet with this comparatively low working "lead," they were able to skid the logs in to the "spar tree" from a distance of 200 feet or more.

It will be understood that the haulage line is carried through this high lead block and then out to the log, the height of the block causing the forward end of the log to raise slightly off the ground, sufficient to enable it to clear obstructions on its journey. Illustration No. 3 shows this "high-lead" block—an ordinary gin block as

commonly made for use with wire cable—chained to the top of the tree. It will also be seen that the tree is guyed in two or three directions to enable it to safely stand the working strain.

In common practice in the small timbers of Eastern Ontario, and with this comparatively low "high lead" block, a man carries the hook and tongs out to the log and fastens the tongs securely into the end of the log, as shown in photo No. 4. He then signals the operator, who presses a lever and starts the log on its journey from the stump to the mill. The attendant usually walks back with the log to be handy in case it meets with an obstruction which it cannot go over or around without assistance. Photo No. 5 shows a log on its arrival at the "spar tree." Note how one end of the log is raised and only the other end dragging the ground.

The log is then lowered to the ground, the tongs detached from the end and fastened again into the centre of the log. It is again



(1) Machine used for skidding logs from stump to loading "yard."

raised clear of the ground, as shown in photo No. 6. The tongs and hook are shown with especial clearness in this snap shot. Two men then guide the log, as shown in photo No. 7, while it is carried or pushed out and loaded on to the skidway, from whence it will later on be rolled off to the sleigh.

Expediting Both Loading and Skidding.

Sometimes it is necessary to use a rope block and tackle to carry the log the right distance from the "spar tree" to make the skidway the desired size. Photo No. 8 shows two men thus lowering the log in place with the aid of a rope block. For large skidways such as this, some operators find that they save both time and money by using a machine with two drums, as in illustration No. 9, using one drum for skidding and the other drum for loading. Both operations can thus be carried on continuously, as the skidders do not have to stand and wait on the loaders. The camp in which photograph No. 8 was taken used one of these two-drum machines in this way, expediting both loading and skidding to the profit of the owner. The amazing amount of work that can be done with one of these little machines when properly handled is well shown in photo No. 8. Note the size and quantity of the logs piled up by this machine. The owner of this camp says that this two-drum machine did the work of three or four teams. Any lumberman can readily figure out how much this man saved in a season by the use of this labor-saving tool. No weather was found too cold for this gasoline machine through all of a long Ontario winter. These same machines are, of course, built for steam power, but are a trifle heavier, owing to the weight of the boiler, water, etc. But where gasoline is expensive or difficult to procure, the steam power has been proven in actual experience in the woods to be both efficient and economical.

Reducing Manual Labor to Minimum.

Another use for these machines is in towing teams up a steep hill. The camp where most of these photos were taken thus used their machine for a considerable period last winter, saving thus the expense of using extra horses for this purpose.

As mentioned above, any machine or tool that will take the place of men, or that will enable the owner to get more work out of the few men he is able to secure, is of interest to the lumberman—one might say, is of vital importance to him. The firm referred to in the beginning of this article was in hard straits for lack of men. There are many more lumbermen in Ontario and East who are similarly situated. In fact, it might be truthfully said that there is not a lumber camp in Ontario with as many men as they would like to have. The camps in which the accompanying photos were taken have found that these little machines do really take the place of men and enable them to get more work accomplished with the men they have. They have saved much money by the use of these machines, and it is to be hoped that many other lumbermen will profit by their experience and use these machines in place of men to help get out the lumber that is so urgently needed now in the upbuilding and development of this country.

Mr. Gordon Reviews Western Conditions

Mr. A. E. Gordon, of Terry & Gordon, Limited, Toronto and Vancouver, returned home recently, after spending six weeks among the Mountain and Coast Mills in British Columbia. He states that when he reached the west and visited the Mountain Mills the tremendous increases in freight rates had just been announced. While an advance had been expected it was not thought that it would be so heavy, or that it would have come so suddenly. The mill men of the west naturally looked to the consumer in the east to absorb the advance, or, at least, the greater part of it, while the man in the east did not view the matter in that light, but thought the mills should take care of the increased charges for transportation. The demand for lumber generally was falling off to some extent about that time, but the jump in freight rates had the effect of practically dividing the west from the east, as far as the general lumber business is concerned.

Continuing, Mr. Gordon said: "Stocks among the Mountain Mills are not large. The plants are practically all closed down and will conduct logging operations only on a very limited scale during the coming winter. There is no disposition on the part of the operators to produce lumber out of which they cannot get the cost of production. Their attitude is one of watchful waiting and the output next year is likely to be considerably decreased, unless there is a radical change in demand and values.

So far as the coast mills are concerned, the situation is somewhat different. A number of these mills, which are doing an export trade in timber and ties, are running. These mills have some side lumber on hand, but as a rule it is dressed to B. C. standard sizes and is not suitable for use in Eastern Markets.

Most of the mills that are not working on export orders are closed down or contemplate doing so in the very near future. Stocks, generally speaking, are very low except in a few special lines.

The supply of logs on hand is away below the average. When I left, there was only about 66,000,000 ft. of fir logs in the storage booms, which would not keep the plants in operation more than a few weeks at the outside. Most of the logging camps are closed down and others are following suit.

With respect to shingles, when I arrived in British Columbia about 75 per cent. of the shingle machines had been closed down. When I left this percentage had been increased to about 90 per cent., with more to follow. In my opinion, there is bound to be a shortage of shingles in the spring. It can scarcely be otherwise.

The whole outlook in the west may be summed up in decreased production and no renewed activity until such times as the demand for western forest products reasserts itself and prices raise to a level which will give the manufacturer a profit on production.

Continuing, Mr. Gordon stated that the greatest setback the lumber industry, in Canada, had received since 1914, was the recent exorbitant increase in freight rates, which is more than was allowed even in the United States, there the average increase is about 33 per cent., whereas in Canada it is about 37 per cent. on transcontinental hauls.

The rate of freight on lumber from Seattle to Buffalo is $1.01 per 100 pounds, whereas from Vancouver to Toronto, a similar distance, the rate is $1.05. This applies practically all along the line and amounts to a discrimination against Canadian lumbermen. Mr. Gordon is of the opinion that if the recent advance had been from ten to fifteen per cent. it would not have proved nearly so deterrent a factor and conditions in the trade would have readjusted themselves much more quickly than they will under the present circumstances.

Another error was in announcing a 5 per cent decrease, taking effect January 1st, which caused the eastern buyer to withhold making purchases until after the decrease comes into effect. Thus trade has encountered barriers over which the lumbermen have no control. A slackned demand, freight rates that are too high, a tendency on the part of all manufacturers to retrench and a general halt in building operations have brought about perhaps the dullest period in trade since the outbreak of the war.

However, Mr. Gordon was confident that in spite of these obstacles conditions would right themselves within a few months and the industry as a whole would be placed on a sound basis in output, distribution and sales. Stabilization in prices, decreased freight rates and production are the great needs of the lumber industry to-day.

Once you get the confidence of the local trade in your district, their patronage is a thing assured.

A good lumberman is known by the customers he keeps.

Show us the man who knows the great value of courtesy in business, and we'll show you a man who is well advanced in that line—and going further.

New Line Will Open Up Lumbering

The construction of a railway line from Quebec to Lake Chibougamau, sanctioned by the Quebec Government, will open up a district stated to be rich in forests and likely to lead to important developments in the lumber and pulp and paper industries. The line will pass through Chicoutimi. The project is being financed by British capitalists, who will also build a belt line of 120 miles from Chicoutimi, passing by the north side of Lake St. John, to St. Felicien, the present terminus of the Government railway, at the western end of Lake St. John. This line will open up to colonization a territory twice as great in area as the district already settled on the south side of the lake. The country on the north side of Lake St. John and of the Saguenay itself, as far down as Chicoutimi is said to be not only much greater in area than that already developed on the south, but it possesses valuable untouched forests, a level agricultural soil, of the very best quality and an excellent climate. The Quebec Government has agreed to grant a subsidy of 4,000 acres per mile for the belt line.

As an evidence of the good faith of the promoters, who have already expended a great deal of money on the survey and location of the line, and have just given contracts for the ties and timber to complete it, they have deposited a large sum of money with the Government as a guarantee, and have agreed to wait until the completion of the whole line before receiving the subsidy.

The line is expected to be of special value in furnishing supplies of pulpwood for the mills at Jonquiere, Kenogami, Chicoutimi and Port Alfred.

The main line will connect with the belt line at the Mistassini River, and from there will continue to Lake Chibougamau, a distance of 180 miles.

A direct line is also being surveyed from Chicoutimi to Quebec, following the valley of the Montmorency or of the Jacques Cartier River, which will shorten the distance between Quebec and Chicoutimi by more than ninety miles, because the existing railway was built for the purpose of reaching Lake St. John, not Chicoutimi. The entire project will be over 400 miles in length.

Cancellations Contribute to Price Slumps

Marcel Krauss, of the Krauss Bros. Lumber Co. and a director of the American Wholesale Lumber Association, was the principal speaker at the weekly luncheon of the Lumbermen's Club recently in New Orleans. Mr. Krauss discussed lumber conditions in general and "cancellations" in particular. He suggested that the present price depression might be attributed in part to the "cancellation" habit, intimating that when a buyer placed orders for the same bill with several concerns, intending only to accept the first shipment, moved and cancel the others, he was helping to create the appearance of a demand that did not exist, and the resulting cancellations contributed to price slumps from which the entire trade suffered in the end. He thought that the contracts implied by the placing of orders should be carried out, proposing arbitration in cases where just cause was pleaded for cancellations.

Business at St. John Shows No Improvement

The lumber trade at St. John has simply gone flat. No improvement is shown and probably none can be looked for throughout the winter. No exporting is being done. Lumber from interior points is being brought into St. John and stored so in case of any improvement in the English and American markets through the winter that the lumber can be moved out. Price has no effect upon sales at the present moment as no one seems disposed to purchase, awaiting the future and what it may bring forth. Labor is becoming more plentiful each day and wages for the woods are not over $60.00 per month. Very few crews are going into the woods from this vicinity. Locally, the building trade is at a standstill and but little jobbing or repair work is being carried out. This has made a falling off in factory work, which is the first appearance of any weakness this season.

Want Nuts from the Sassafras Tree

The "Canada Lumberman" recently received an inquiry from a gentleman in London, England, who wished to obtain a supply of Sassafras nuts or the seed from that tree. The correspondent stated that English importers of Sassafras products say the nuts have no commercial value and, therefore, no trade is done with them.

It seems that the Sassafras tree grows on the Ontario Government nurseries in Norfolk County, to some extent, and that it has attained a diameter up to 16 inches. In Essex County there are quite a large number of these trees big enough to cut up, the height averaging from 50 to 60 inches. The wood resembles black ash, only that it is softer. The "Canada Lumberman" is informed that, although classed as a hardwood, the Sassafras has no value as a commercial wood and neither have the nuts any practical worth. The bark of the tree is largely used for smoking ham and bacon, and is reported excellent for that purpose.

The Sassafras tree is seen in High Park, Toronto, but has there only attained the proportions of a large shrub. In Michigan and Pennsylvania the tree grows to a much greater extent than in southwestern Ontario, but is not much sought after.

Mr. Perry Resigns—Mr. Schupner Promoted

E. F. Perry, who for many years has been secretary of the National Wholesale Lumber Dealers' Association, whose headquarters are in New York City, has sent in his resignation, which will take effect on January 1st next. In a letter to the trustees (of which A. E. Clark, Toronto, and Gordon C. Edwards, Ottawa, are members) Mr. Perry says that during the past few months there has been impressed upon his mind more strongly than ever, the growing opportunity for service as well as the business prospect offered by the field of insurance for lumbermen. He adds: First entered into somewhat casually this field with growing acquaintance and experience has now assumed proportions that not only attract, but seem properly to demand the larger part of my active time and attention. This is especially emphasized by the rapid growth of the Lumber Mutual Casualty Insurance Company of New York, of which I have been Vice-President and General Manager. For sometime, therefore, and with a reluctance you will readily understand, I have had to consider the probable necessity of a withdrawal from active service to the Association. Fortunately, the present very pleasing condition of Association affairs, its high membership record, its achieved position of enlarged usefulness, and the exceptionally pleasant relations existing between

W. W. Schupner, New York
who succeeds E. F. Perry as secretary of the N. W. L. D. Association.

us all, seems to present a very opportune time when I may be permitted to suggest this change.

Mr. Perry is well known to a large number of Canadian lumbermen and attended the last annual meeting of the C. L. A. in Quebec City. His successor in office will be W. W. Schupner, who has been indentified with the National Wholesale Lumber Dealers' Association for the past twenty years, and in a most efficient manner has acted as Mr. Perry's assistant. Mr. Schupner was one of the speakers at the annual gathering of the Canadian Lumbermen's Association in St. John in 1919 and is no stranger to the majority of the members of that body.

Speaking of his successor, Mr. Perry, in a recent letter to the "Canada Lumberman," says, "Mr. Schupner has grown up with the Association and has been especially active in the Bureau of Information which has to do with the Credit, Legal and Collection features of the Association, and which are recognized by the trade at large and by our membership as being the outstanding features of our work. Our Credit Department has been constantly increasing, reports on hand growing to somewhat between 35 and 40,000, and the Collection Department has reached a point where it will handle close to a million dollars in claims per year. Mr. Schupner has done a large amount of traveling, and has acquired a wide acquaintance in the Lumber Trade and has in every way fitted himself to take over the duties which will develop upon him in assuming the position of Secretary.

Personal Paragraphs of Interest

T. R. Dunn of the T. R. Dunn Lumber Co., Winnipeg, was in Toronto recently, calling upon the trade.

Mr. MacDonald of the B. C. Manufacturing Co., New Westminster, B. C., was in Toronto recently, calling upon the trade.

Sydney J. Anderson, of Anderson, Shreiner & Mawson, Toronto, recently returned from a hunting expedition in Eagle Lake district.

Col. W. J. Green of the Green Lumber Co., St. Thomas, returned recently from a successful deer hunting expedition near Pakesley, Ont.

L. D. Barclay of Toronto, eastern manager of the Canadian Western Lumber Co., Fraser Mills, B. C., is on a business trip to the Maritime Providences.

Guy H. Long, of the Long Lumber Co., Hamilton, lately returned from Ravensworth, Parry Sound district, where he was a member of a successful hunting party.

W. Gerard Power of the River Ouelle Pulp & Lumber Company, St. Pacome, P. Q., has taken a residence in Montreal, where he will reside for the winter months.

H. F. Holton, of Toronto, who is a member of the inspection staff of the National Hardwood Lumber Dealers' Association, has returned from an enjoyable hunting trip near Restoule.

Alfred St. Onge, who has been with Graves, Bigwood & Co., Byng Inlet, Ont., for several years, was in Toronto recently on his way to his old home town, Trenton, and called upon a number of friends in the industry.

Wm. Stewart of the Union Lumber Co., Toronto, who has been ill for some months, is now making good progress toward recovery, and will resume his duties in the near future. This will be good news to his many friends in the industry.

R. G. Chesbro of Toronto, and P. L. Canfield of Woodstock, Ont., left recently on a business trip to the Coast. They will visit all the important lumber centres and look into the situation for the coming season so far as production, manufacturing conditions, etc., are concerned.

Captain J. Annesley, of Owen Sound, one of the veteran loggers and lumbermen operators of Manitoulin Island a number of years ago, was in Toronto lately paying his respects to a number of old friends in the industry. "Cap." as he is familiarly known, is now over 80 years of age and is remarkably active.

A. N. Dudley, wholesale lumber dealer, and T. E. Rathbone of George Rathbone, Limited, Toronto, who were members of the Hobell Camp hunting party near Spragge, Ont., have returned home. There were sixteen members in the club which secured its full allotment of deer and several partridge.

W. M. Findlay, Toronto representative of Long Lumber Co., Hamilton, who was a member of the Gem Lake Hunting Club, spent two weeks recently in the Algoma district. The party, composed of eleven representatives, who were successful in getting their share of deer and also a big black bear.

A. J. Wallace of Barrie, Ont., who for fourteen years successfully represented the Waterous Engine Works Co. of Brantford, has resigned to enter upon his new duties as manager of the new sawmill of Austin & Nicholson at Dalton, Ont. Mr. Wallace is well and favorably known throughout the province as a practical sawmill man.

Lorne McDonald, who has been employed by the Laurentide Company, Grand Mere, P. Q., for several years, has left to go in business for himself buying pulpwood in the Province of Ontario. Mr. McDonald has been in the real estate department since last spring in charge of maintenance work. He served overseas for a long period and returned to the company after his discharge.

Out of respect to the late Mr. Edgar Judge, of the Judge Grain Company, Montreal, the Montreal Corn Exchange adjourned on November 9th. Mr. Judge was the senior member of the Exchange, having joined the Association in 1873; he held various offices, including that of President for two years. Mr. Judge was well known in the lumber trade, his firm doing a large business with many lumber concerns.

A jolly party, which got their full count of deer, had a pleasant two weeks' outing at one of the Hocken Lumber Company's camps near West River. There were ten members in the camp, and in the matter of bringing down the swift-footed denizens of the forest, they were very successful. Among those who enjoyed the outing were Norman Hocken, of West River; C. G. Anderson, Maurice Welsh, J. G. Cane and Horace Boultbee, of Toronto.

R. McDonagh, of Hart & McDonagh, Toronto, who is the president of the Kiltie Lake Hunt Club, has returned from a two weeks' hunting trip to Restoule, Parry Sound district. Among the members of the party were H. C. Monteith of the Bray Lumber Co., Powassan, and A. L. Perkins, mayor of the town. There were twelve in the camp and the boys succeeded in getting their full count of deer, which were plentiful, and several partridge. The Kiltie Lake Hunt Club intend erecting new camping quarters during the coming season.

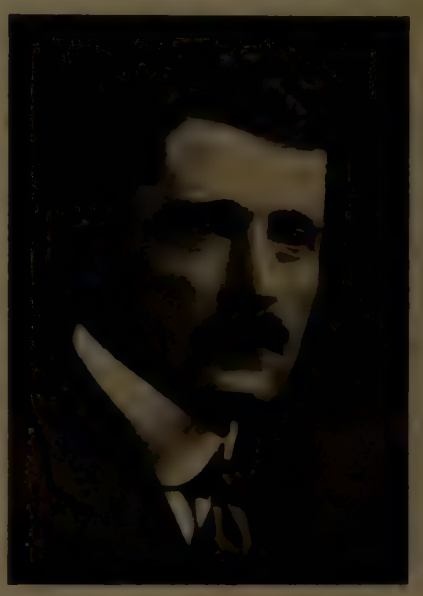
Walter C. Laidlaw, of the R. Laidlaw Lumber Co., Toronto, was re-appointed president of the Central Neighborhood House, the nineth annual meeting of which was held recently in Toronto. The aim of the organization is to show new citizens the best meaning of Canadian nationality and to help them preserve the best in the heritage they bring with them from their own country. Work among the Italian and Slavic population is now an important phase of the Neighborhood House activities. The staff now consists of three resident workers, one non-resident worker, twenty-seven volunteer helpers and a man to take charge of the boys' work.

Wm. Henderson of Toronto, superintendent of the Shantymen's Christian Association, returned recently from a visit to the camps in Nova Scotia and New Brunswick. He reports that the work is progressing favorably in the Maritime Provinces and that, while the number of lumber camps there will not be as great this winter as in previous seasons, there is an increase in pulpwood camps which will keep the workers of the Shantymen's Christian Association busy. In Ontario the work is also going ahead on a satisfactory basis and during the coming month it is expected there will be twelve representatives in the field. Every camp in the province will be visited, not only once, but some of them several times and religious services held. Mr. Henderson says the results have been very encouraging during the past few months.

C. Schmidt and Harold George, of the selling staff of the R. Laidlaw Lumber Co., Toronto, returned recently from a successful deer hunting expedition at Pickerel, Ont. They are delighted with the result of their outing. Mr. Schmidt shot a 262 lb. red buck, with a 22-calibre rifle. The bullet landed in the head of the animal, which fell an instant victim to the unerring aim of the marksman, who has been remembering his friends with generous portions of venison and has been dubbed by those in the lumber industry as the "deer-slayer of the north." Mr. George was also successful in shooting 13 partridge and considers his record equally as creditable as that of his fellow-hunter.

Well Known in the Lumber Arena

J. S. Bock, president of the Eagle Lumber Company, Limited, Montreal, is one of the best known figures in the Montreal lumber trade. He has had a very wide experience in the manufacturing and selling ends of the industry. Born at St. Anne-des-Plaines in 1875, he



J. S. Bock, Montreal

was for 15 years manager of the Papineauville Lumber Co., Limited, and joined the Eagle Lumber Company, Limited, in 1911. The company have an extensive business in hard and soft woods, owning limits in the Laurentian Mountains, P.Q., and on Bell River in the Abitibi district. The company also own mills at St. Jerome, St. Margaret, Hebert and Mont Laurier. Mr. Bock is president of Bock & Tetreau, Limited, wholesalers, Montreal, and a director of L. Villeneuve & Company, Limited, Montreal.

Lumbermen Will Gather in Ottawa

Annual Meeting This Year One Month Earlier than Usual —January 12th and 13th the Dates

The Thirteenth Annual Meeting of the Canadian Lumbermen's Association will be held at the Chateau Laurier, Ottawa, Wednesday and Thursday, January 12th and 13th. Every arrangement is being made for the success of the gathering and it is expected that the attendance will surpass that of any previous convention.

The annual banquet will take place on the evening of Wednesday, January 12th and a strong, active committee has been appointed for the purpose of securing the best available speakers and also to provide entertainment for the delegates during the convention. Ladies will be prominently represented and special efforts will be made to provide for their adequate entertainment during the two days in the Capital City.

A word of explanation perhaps is due regarding the selection of dates. The committee was confronted with the fact that Parliament

Canadian Lumbermen's Association

13th ANNUAL CONVENTION

Place—Chateau Laurier, Ottawa, Ontario

Date—Wednesday, January 12th, and Thursday January 13th, 1921

Admonition—Hold these dates open

is expected to assemble about the middle or third week in January and it was necessary to have the convention take place before this event, so as to be sure of being able to obtain adequate hotel accommodation.

This is now assured, says Secretary Frank Hawkins, and it only remains for the members and friends of the Canadian Lumbermen's Association to assemble in Ottawa on the dates mentioned and again demonstrate the practicable value of the Association's effort.

With an ear to the ground one may plainly detect the distant rumble made by the Ottawa Committee to make the coming convention the biggest and best ever.

The officers of the C. L. A. are. Hon. Pres. J. R. Booth, Ottawa; Pres. Dan. McLachlin, Arnprior, Ont.; Vice-Pres. Walter C. Laidlaw, Toronto; Angus McLean, Bathurst, N.B.; Hon. Treas. R. G. Cameron, Ottawa; Secretary, Frank Hawkins, Ottawa.

The directors are: James G. Cane, Toronto; Duncan McLaren, Toronto; W. J. Bell, Sudbury, Ont.; Sir Wm. Price, K.B., Quebec, P. Q.; Arthur H. Campbell, Montreal; W. B. Snowball, Chatham, N.B.; Rufus E. Dickie, Stewiacke, N.S.; R. G. Cameron, Ottawa; W. E. Bigwood, Toronto; Gordon C. Edwards, Ottawa; A. E. Clark, Toronto; W. M. Ross, Ottawa; W. G. Power, St. Pacome, P. Q.; Alex. MacLaurin, Montreal, P. Q.; Angus McLean, Bathurst, N. B.; E. R. Bremner, Ottawa; Dan McLachlin, Arnprior, Ont.; Walter C. Laidlaw, Toronto; Geo. W. Grier, Montreal, P. Q.; David Champoux, Restigouche, P. Q.; J. Fraser Gregory, St. John, N. B.; Sir D. C. Cameron, K.C.M.G., Vancouver, B. C

Many Southern Mills Cease to Operate

W. H. Harris, of the Frank H. Harris Lumber Co., who spent a month in Mississippi, Alabama and Arkansas, returned to Toronto recently. He reports that a large number of mills in the south have closed down and that others intended to cease operations within a few days. There is practically little or no demand for southern woods. The stocks are not heavy at the mills. The cost of operation is so high that it does not pay manufacturers to go ahead and turn out a product on which cost cannot be realized.

Mr. Harris reports that their own mills at High Point and Lake Mississippi have been closed for some time. A number of plants have been sawing railway ties and this work has also been finished. The past summer was a rainy one in many of the southern camps, and gum, oak and other logs, which were cut could not be brought out to the railways, with the result that a large proportion have become worm-eaten. Many logs are along the track at present awaiting shipment to the mills, but as they are not required owing to the quiet state of the trade generally the logs may be still further damaged. It was not until early in September that the rainy season ceased in the south, since which time fine weather had prevailed.

Mr. Harris reports that there is little or no disposition on the part of southern negroes, who work in the mills, to take less wages. They are still holding out for a high figure, and while a number of plants would continue to operate if the workers would take a reasonable decrease, they find no desire on the part of their employees to do this, and so the industries have had to close down. Where mills re-open and workers have been idle for some time, the latter, they are generally willing to accept a cut in pay.

How Retailers Stand on Shingles

With a view of ascertaining the views of the retail lumbermen of the northwest regarding shingles, packed by the square or thousand, we sent out a questionnaire to a selected list of dealers. We refrained from expressing any opinion for or against the two methods of packing, says the "Mississippi Valley Lumberman."

While we did not receive as many replies as we had hoped for, yet response came from large and small dealers and from various sections of Iowa, Minnesota, Wisconsin, North and South Dakota.

A considerable number of the views of these retail lumbermen have been published in recent issues.

The result of our investigation indicates that a large majority of the retail lumbermen of this section of the country are opposed to the square pack and in favor of continuing the old or thousand pack. Up to the 3rd of the month we received 81 replies of which 28 expressed a preference for the square pack. Of this number, 8 qualified their choice by the proviso that they would prefer the square pack if a single unit could be established. Several of those who advocated the square pack gave as their opinion that it would be better to continue the thousand pack rather than to have the two units.

Forty-two dealers contended that the old or thousand pack was preferable and many of them gave their reasons therefore. One dealer voted for the thousand pack on condition that it should be the single standard.

Ten retail lumbermen had no preference between the square and thousand pack. With but few exceptions, however, they all claim that a double standard is detrimental to their interest, and that of the manufacturers and the consumers. Only one dealer favored the double standard.

If these 81 dealers are expressing the views of the retail lumbermen of the northwest, and we believe they do, the showing is not very favorable for the universal introduction of the square pack. The proponents of the square pack have admitted that the dealers in the northwest have not been favorable to changing from the thousand to the square pack, but have claimed that the retail lumbermen of the eastern states will not take shingles packed any other way if they can get them. This statement is contradicted by the manufacturers who continue to pack by the thousand and they submit as proof of their contention their records showing that they have been able to sell their product freely in the eastern territory.

That some solution will be found for this vexed problem at the forthcoming annual meeting of the shingle manufacturers goes without saying. They all have so much at stake that they cannot afford to continue their past suicidal policy.

Northern Company Will Not Decrease Cut

C. J. Price of the Moose Lake Lumber Co., Cobalt, Ont., was in Toronto recently calling upon members of the trade. The company's mill, located seven miles from Cobalt, which was burned last July, has been rebuilt. Mr. Price purchased the equipment of J. J. McLellan of Gillies' Siding and installed it in his new mill which has a sawing capacity of about 18,000 feet a day. During the past season Mr. Price sawed about 2,000,000 feet, principally of jack pine, and has made arrangements to have the same quantity of lumber logged during the winter. He has also contracted for 5,000 cords of spruce pulpwood, which is bringing $14.00 per cord, f.o.b. cars. An unusually large quantity of pulpwood is being taken out this year in and around Cobalt due to the active demand which prevails for this commodity.

Paper Clothing is Very Cheap

Cleaners and dyers will retire from business if Americans take kindly to the paper suits, overcoats, suspenders and other garments a shipment of which has just arrived in Chicago from Germany and Austria. All one needs to freshen up his clothes is a wad of art gum or an eraser.

One of these suits, made entirely of paper, from the buttons to the price tag, sells for 575 crowns, or about $2.50 in American money.

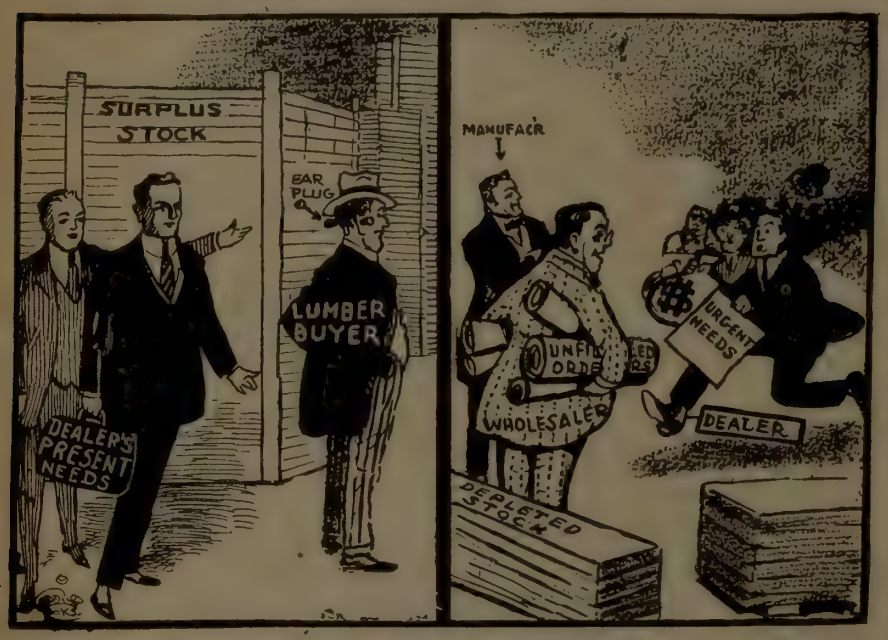
In addition to the garments for men and women, there are aprons of all kinds, table covers elaborately embroidered, curtains, hoods, twine, collars and cuffs. The clothing is treated with some sort of shellac that is supposed to make it waterproof. Otherwise a man wearing a paper suit who was caught out in a heavy rain would return without any clothing.

Policy of Steady, Consistent Buying is Best

The Dealer Can Virtually Remove Speculation from Market if He Will Set His Face Deliberately Against It—The Proper Basis of Purchase

Just now there are a number of potential buyers of lumber who are regarding the stagnation of the market and the resultant slump in prices with a sort of grim satisfaction, says "Lumber." But this satisfaction, particularly in the case of the lumber dealer, is allowed by uneasiness because of a stock of lumber in hand that cost considerably more than it could now be bought for. These buyers—many of them actually needing lumber so badly that they are not in position to properly serve their trade—are hesitant. They are "waiting." For what are they waiting?

On the other side of the picture there are hundreds of manufacturers of lumber faced with the problem of suspending operations or of accumulating huge quantities of stock in excess of what can be sold and shipped. Either course is expensive. The present high in-



The Familiar Cycles of the Lumber Market

terest rates for borrowed money, in fact, render the accumulation of excessive stocks extremely expensive. The disorganization of carefully built-up operating crews, the deterioration of unused machinery and equipment, the loss in efficiency through any slowing down of operations—these are likewise expensive. Who pays?

In great measure, the present condition of the lumber market is a reaction from the intense speculative activity—the speculative war—of the latter months of 1919 and early 1920. Virtually all who observed that active period are agreed that the extremely high prices were a result of competitive bidding on the part of buyers. It was an era of speculation, not only in lumber, but in dozens of other commodities.

But a continuance of the present condition must unfailingly bring another reaction. That is the invariable history of speculative activity. The turning point has probably been reached now, for several grades of structural lumber are being sold below cost of production. This is naturally resulting in a cutting down of production. So, if the stagnation in demand continues long, there will be another turn in the cycle. What is now a stagnated market as the effect of reaction can be expected, because of accumulating demand, to become a feverish market, caused by this very stagnation.

Just why should the lumber market be a speculative market? Above all, why should the lumber dealer be made a party to speculative activity? Why should he heed propagandist urgings that certain times are the "right time to buy" or listen to urgings, that are likewise propagandist, at other times, to "stay out of the market?"

The business of lumber dealers is not based on speculation, even in the remotest degree. It is straightforward, day-to-day service to his community, for which he asks, and receives, a reasonable profit. By and large, ninety per cent. of the dealers of America, we believe, much prefer stability in the market. They prefer a condition in which they can have confidence in values and can transmit that confidence to their customers.

Speculation should be, and we believe it is, abhorrent to the dealer. His every interest is against it and it is decidedly to his interest to do all that he can to promote stability.

The dealer can virtually remove speculation from the lumber market if he will set his face deliberately against it. He can do it in just one way:

By refusing at any time to let speculation enter into his purchases.

By buying for his needs (which are based on the needs of his own customers) as those needs develop.

By refusing to "stay out" of the market.

By refusing likewise to be stampeded into "overbuying."

In short, be careful, discriminative buying throughout each year in reasonable anticipation of his customers' needs.

There was an instance last month, outside of the lumber trade, of a loan of $250,000 for a non-speculative enterprise on which the borrower paid twenty per cent.—eight per cent. interest and twelve per cent. "commission." This gives an intimation of what the carrying costs of large lumber stocks in the hands of the manufacturer will be. The word "costs" is used advisedly, for interest charges, excessive or not, are a part of the primary cost of any article. The actual cost of lumber, high already because of high wages and expensive equipment, is being increased by the present market stagnation.

The cost will be passed on. It will be added to the other high costs whenever, under the present scheme of things, the needs of the dealer force him into the market for lumber. And, under the present scheme of things, there will be inflation of profits as well if great numbers of dealers are forced into the market at once, either through actual needs or by propaganda. The dealer will pay, and his customer will pay.

We believe that it is time now for the dealer to inaugurate a policy of steady, consistent, non-speculative buying. Now, because there is now a buyer's market. The matter is in the dealers' hands now, but if the speculative cycle is permitted to round itself out, the dealer will be powerless.

His present action should be adoption of a policy of buying for his present needs. If those needs are heavy, he should buy very gradually, holding his purchases and scattering them. He should make his purchases just proportionate to the actual business he is doing. If he has permitted his stock to run low, as many have, he should build it up slowly to what he considers a fair normal.

Even on a speculative basis, we believe that most of the grades of the two species of lumber—yellow pine and Douglas fir—most used in construction, are a fairly safe purchase at present. It is certain that some sales have been made below cost of production.

But, in the interest of the dealer, we urge that he disregard all speculative impulses. That he hold his purchases to his needs, but that he unhesitatingly buy for those needs. This advice has been given to dealers before by us. It was sound then. It is sound now! It is endorsed by thinking men throughout the industry.

Prevent another speculative war by sane, normal and proper buying, resumed now on an unhurried plan and continued on a basis of real needs and without reference to speculation.

You and Robinson Crusoe

"One of the most persistent advertisers in the history of success was Robinson Crusoe," writes Prairie Farmer.

"He knew what he wanted—a ship—and he put up an ad for one.

"He flung a shirt on a pole at the top of his island; that, in the language of the sea, was plain to every seafaring man.

"The circulation was small, there was no other medium but Crusoe kept at it, despite the fact that he got no inquiries for a long time.

"In the end he got what he wanted, was happy, and his name and fame have come down through the ages!

"Suppose Robinson Crusoe had taken down his signal after a year and declared: 'Advertising doesn't pay!' Where would he and his story be now?"

Or suppose something had whispered in his ear: "No use, Robinson—these are pretty hard times. Nobody s buying or sailing any ships while money's so tight. Better cut out your advertising until times get good again."

Advertise now and next month, and next year. Put up your signal and keep it there!

The Kinds of Material that Come Out of Giant Douglas Fir Log

The illustration shown is from a photograph of a cross section of a Douglas Fir log. This section was displayed at a recently held Railway Appliance exhibit at Chicago by the West Coast Lumbermen's Association of Oregon and Washington and created a great deal of interest, not only on account of the unique nature of the exhibit, but also of its educational value. Few, although familiar with the manufactured products, scarcely conceived that timber grew in such quality and size as to secure the various grades and class of lumber from a single log.

This was secured by taking a section of the log, it being about 48 inches in diameter and bandsawing the same into the various pieces as marked. The whole was re-assembled and shows how the log would be graded and sawn in the usual process of manufacturing in the regular way.

It is interesting to note the product of the log and from which portion of same, the various grades and kinds of lumber are obtained. It will be observed that securing almost every class of material is the result of proper grading and saving the log by experienced sawyers and others.

Starting with the slab, this stock is sorted as to quality and size, some going into ordinary fuel, the desirable and suitable being passed on to the lath mill. After "slabbing" (as it is termed) one or more sides, we come to the "clear," used for "finish," such as casing and base; then a four or six inch cant to be resawn by a gang saw or other appliances in siding and flooring strips, the latter usually "turned down" and producing vertical grain lumber and in some cases, ten and twelve inches thick for high grade vertical grain stepping.

Proceeding further with the cut by constant turning of the log and approaching the heart, the "select" and "merchantable" grades of ship-barge and car materials are obtained. Between the remaining

section of the log and the heart are secured structual and bridge timbers, heavy joists and to the smaller sized dimension, boards are in the common grades.

While, of course, the large log illustrated was selected for the purpose, all logs will not produce such results. A considerable percentage of the fir growing in British Columbia, and in the Pacific Coast will however, do so.

The smaller second growth fir is converted into ties, timber dimension, etc. In some instances when the growth warrants, on account of its nature and strength, it makes the most desirable car decking-car sills, and other car framing material, though of a coarser grain.

Toronto Firm Specializes in Hewn Timber

The Toronto Timber & Cordwood Co., Limited, was recently granted a charter and has offices at 95 King St. East. E. F. Griffiths is the president of the company and C. W. James, Jr., vice-president and general manager. Mr. James has been associated with the forest products business practically all his life, and spent several years with his grandfather, the late Martin McKee, who conducted at 1072 Queen St. East, Toronto, a successful planing mill.

The Toronto Timber & Cordwood Co. also has a European office at the "Waldorf Hotel," London, England. The firm specializes in hewn timber and lumber, and are also large buyers of body, maple, beech and birch cordwood, which is sold to civic corporations and other large consumers. The company is operating three camps for the taking out of hewn jack pine and other timber, and have some 200 men engaged in this operation at present. Two camps are located near the Christian Islands in the Penetang district, and another at Walsh in Norfolk County. The average size of the hewn timber is about 9 in. x 12 in. and from 12 to 16 ft. in length. This is shipped principally to Belfast, Ireland, and Mr. James reports that his firm will take out nearly a million feet, log measure, this season. The timber is scaled and then either jack-planed or flat-axed, and already several cars have been sent forward. Across the water the hewn stock is used for ship timber, building and factory purposes.

Mr. James says that his concern is handling considerable cordwood from various centres and has received a large number of quotations f.o.b. shipping points. Slabs and edgings, either softwood or hard wood, are also bought.

Lumber Was Exceptionally Well Milled

The P. B. Yates Machine Co. have recently issued an attractive new catalogue, entitled "Yates' Planers and Matchers." It covers the complete line of planers and matchers manufactured by the company, together with a full description of each machine. The booklet is well printed, admirably gotten up and attractive in appearance.

The Yates Co. lately received some interesting correspondence from the lumber firm of Blair & Rolland, Limited, to the effect that Mr. Louis S. Rolland recently returned from a trip around New Jersey and Pennsylvania interviewing a number of customers who received some cars of dressed pine milled by James Davidson's Sons, Ottawa. Mr. Rolland looked the stock over carefully to investigate the class of milling that was being put through for his firm. He states that his customers advised him that the dressed stock, which was shipped them, was without doubt the finest class of milling on any lumber that they had ever received.

Mr. Rolland wrote James Davidson's Sons, Ottawa, to this effect, who later forwarded the letter to the P. B. Yates Machine Co., Hamilton, along with the following comment: "You will notice that the letter from Montreal is quite a boost for us, and as this work was done on your matchers, we thought it was only fair that we should pass the letter along as you were deserving of some of the credit. We think that the credit is evenly divided between us, 1st, because the machines were of your make, which enabled us to turn out good milling, and 2nd, we take the credit for having men to look after your machines in a proper way."

Says Mr. Backus Has No Monopoly

Premier Drury stated recently that the agreement made between made between the Crown and E. W. Backus for the English River timber limits and the power rights of the White Dog Rapids would by no means give the Backus interests a monopoly. It was pointed out to Mr. Drury that in a story from Fort Frances it was stated that the agreement provided that the successful bidder for the English River limits would have to do all manufacturing in the town of Kenora. That story also contained the statement that as Mr. Backus had a monopoly of power in the town of Kenora, no other timber men could possibly bid.

The Premier denied emphatically that the Backus interests had a monopoly of power and produced the agreement and the conditions of sale to prove his point.

"There is not near enough power in Kenora to operate the mills required to be built," he said. "Power for these mills will have to be brought in from elsewhere. By the agreement the Northern Dam and all surplus power goes to the Government and this in turn will be turned over to the successful bidder in Kenora. The agreement reads:

"'The lease of the said water power (referring to the White Dog Rapids), shall be the standard form of Government lease of water power, but in addition the said lease and rights so granted shall be subject to the rights of all private ownership property, which are liable to be affected by the development of the water power at the said rapids or the storage of water in connection therewith; and to such rentals, reservations, provisos, conditions and stipulations, including the regulations of the Norman dam at the outlet of the Lake of the Woods, as the Minister of Lands and Forests may deem to be in the public interest.'

National Hardwood Executive Meeting

The National Hardwood Lumber Assocation, of which George C. Goodfelow, Montreal, is one of the directors, and Horace F. Taylor of Buffalo, presdent, has called the regular mid-year meeting of the directors on Thursday December 16th. Important matters will come up for decision at this session, and among them the selection of the time and place for the Twenty-fourth Annual Convention. For many years the gathering has been held in the west but a number of cities in the east have filed their claims for consideration. Several applications for membership have been received of late, and among these two are from Canada, Boisse & Racicot, Regd., Sherbrooke, Que., and W. F. T. Story, Montreal.

New Company Will Furnish Pulpwood

The St. Regis Paper Company, Limited, of Canada, a subsidiary company of the St. Regis Paper Company of America and owned and operated by the same people, was organized in Montreal recently with a capitalization of $1,600,000. All the Watertown officials of the St. Regis Paper Company were in Montreal for the meeting.

Of the total capitalization, $1,500,000 is in preferred stock of which $1,000,000 is to be used for additional working capital and there will be $100,000 in common stock without par value. All the stock is to be owned by the Regis Paper Company of America. The company starts business with $1,600,000 paid in.

The business of the company will be to furnish Canadian pulpwood from its freehold lands to the American company and its mills at Deferiet Herrings and Black River. An extensive operation is now under way in the Champlain and St. Maurice districts in the province of Quebec, and a much larger operaton will be started in the Saguenay district.

Packing of Shingles by the Bunch

A subscriber from Cookshire, Que., writes the "Canada Lumberman" as follows.

When I buy shingles by the thousand, four bunches to the thousand, what size is the standard bunch, how many courses to the bunch, and full particulars as to what I have a right to expect. An explicit reply will greatly oblige.

The following covers the points raised in the foregoing inquiry, and will be read with interest:

XXX Clear

6 butts to measure not less than 2" when green. Must be strictly clear, vertical grain, smoothly sawn and otherwise well manufactured. Random widths but no shingles narrowed than 3". No sap or shims allowed. When dry 25 courses to measure not less than 8".

XX Clear

5 butts to measure not less than 2" when green. Must be strictly clear, vertical grain, smoothly sawn and otherwise well manufactured. Random widths but no shingles narrower than 3". When dry 25 courses to measure not less than 9¾. No sap or shims allowed.

XX-6/2

6 or 8" clear butss. Random widths but no shingles narrower than 2". When dry 25 courses to measure not less than 7¾.

XX-5/2

6 or 8" clear butts. Random widths but no shingles narrower than 2". When dry 25 courses to measure not less than 9½.

All 16" shingles shall be packed 25-25 courses to the bunch. 4 bunches to the thousand.

All bundles shall be 20" in width and openings shall not average more than 1½" per course.

One inch over and under in length admitted.

Any shingle not over 1¼" off parallel shall be considered parallel.

Not over 4 per cent. off grade permitted for discrepancy in inspection.

Quebec Limit Holders Want Certain Changes

Desire Tariff of Stumpage Dues Amended—Memorandum Submitted by Representative Lumbermen Which Will be Given Serious Consideration

A meeting of Quebec Limit Holders was held at the Chateau Frontenac, Quebec on November 17th, to arrange for a deputation to wait on the Provincial Government the day following, and submit a memorandum protesting at the recent increase of duties on the exploitation of the timber limits in the Province of Quebec, coupled with a suggested change in the regulations. After this meeting the Limit Holders in attendance, were the guests of Mr. W. Gerard Power, former President of the Canada Association at the Chateau. The following gentlemen were present: Messrs. Marshall Small, Chairman of the Limit Association; Brig.-General White, Montreal; Wm. Power, ex M.P. Quebec; Sir Henry Egan, Fred Booth, Phil. Walker and John Black, Ottawa; Dan McLachlin, Arnprior; David Gillies, Sr. David Gillies, jr., and J. E. Gillies, Braeside; J. M. Rochester. F. Ritchie and J. M. Dalton, Three Rivers; John Champoux, Quebec; G. M. Storr, Lake Megantic; Norman Brown, Berlin, N. H.; Paul Owens, Secretary of the Association and Major C. G. Power, M.C., M.P., recently appointed Attorney for the Association.

On Thursday morning the 18th instant, the Limit Holders as above mentioned, proceeded to the Department Buildings where they were received by the Prime Minister, Hon. L. A. Taschereau, Hon. Honore Mercier, Minister of Lands and Forests, Hon. J. E. Perreault, Minister of Colonization, Deputy Minister, and Chief Officials of the two last named departments.

After an exchange of courtesies and congratulating Hon. Mr. Taschereau on his elevation to the Premiership etc., the deputation submitted their memorandum, which was read by the legal advisor Major Power and supported by the Chairman, Mr. Small, and several members of the deputation, who protested the change recently made in the text of article 12, of the forest regulation which took effect on May 1st 1920. The article as changed follows:

> "Licensees are forbidden to cut on Crown lands white or red pine measuring less than 13 inches, and other trees less than 12 inches diameter at the stump measured two feet above the ground, but it is permitted to cut black spruce and gray spruce down to 10 inches in diamenter, paper birch, balsam, fir, poplar and aspen down to 7 inches in diameter, measured as aforesaid. However, the Lt.-Governor in Council will have the right, after inspection of the Forest Service, to recommend exception to these regulations, on the territories indicated by Forest Service and according to the conditions imposed by the Government."

The circular letter sent out by the Department to the Limit Holders in April last notified them that, if, on the territory they intended to operate the next season, there should be some sections where the trees had reached thir maximum size, or where for other reasons an exception should be made to the above regulation, they were asked to send to the Department, not later than May 25th, a formal demand of inspection, giving all the details about the sections in question, their approximate area in acres or square miles and also furnish the Departmen with a map showing the location of the tracts. It would appear that the Limit Holders had not made any serious objection to the change in the regulations governing the cut of trees on the crown lands, and if it were not for the order in council passed in October 6th, 1920, imposing increases, the objection to the change of the regulation might for the present have been left in abeyance. This order in Council, for instance, has increased the cost of operation very considerably. For instance the cutting of square, waney or flat timber, white pine, oak, hickory and walnut from 8 cents and 10 cents to 15 cents for cubic foot. Red pine, elm, ash, cedar, bass-wood, birch, maple and tamarac, from 6 and 8 cents, as set forth in order in council June 1918, increases to 12 cents per cubic foot.

Want Timber Tariff Modified

The increases in all wood cut, was proportionately made by the order in Council passed October 6th last. It is said that at the time of these increases were made, after a survey by forest engineers when it was thought advisable to keep pace with the increase in the price of lumber and pulpwood and the tariff of the stumpage dues as follows:

Executive Council

Quebec, 6th October, 1920.

Present: The Lieutenant-Governor in Council.

It is ordered 1: That all wood cut on Crown Lands, dating from the beginning of the forest license year 1920-21, be subject to the following dues:

1.—Square, waney or flat timber.

a) White pine, oak, hickory and walnut..$0.15 per cubic ft.
b) 30 to 40 feet in length..... 1.50 "
birch maple, tamarac..... 0.12 "
c) Spruce, balsam, grey pine, hemlock, white birch, aspen, poplar..... 0.10 "

II.—Saw logs and boom and dimension timber in the raw state:

a) White pine, oak, hickory, walnut...$5.00 per 1000 f.b.m.
b) Red pine, elm, ash, basswood, birch, maple, tamarac..... 3.50 " "
c) Spruce, balsam, grey pine or banksian pine, hemlock, white birch, aspen, poplar..... 2.70 " "

III.—Poles more than 18 feet in length, not exceeding 10 inches in diameter at the small end, each.

a) 30 feet and less in length.....$0.75 each
b- 30 to 40 feet in length..... 1.50 "
c) 40 to 50 feet in length..... 3.00 "
d) 50 feet and over in length..... 6.00 "

IV.—Railway ties or sleepers not exceeding 9 feet in length..... 0.15 "

V.—all other goods——15 per cent. ad valorem

2. That the Orders in Council No. 295 of the 26th April, 1920 and No. 765 of the 13th June, 1918, be modified accordingly.

3. That the present Order in Council shall, in no wise, affect the recourse of the Government respecting the collection of unpaid dues, due under the said Orders in Council No. 295 of the 26th April, 1910, and 765 of the 13th June, 1918, which dues shall continue to be collected as if the present Order in Council had not been adopted.

A. MORISSET,,
3646 Clerk of the Executive Council.

In their protest, the Limit Holders impressed upon the Government the fact, that price of lumber and pulpwood had appreciably decreased in price since the order-in-council of October 6th was passed, and was likely to further decrease, and urge on the Government to modify this tariff and at the same time revoke the latest regulations in regard to article 12.

Premier Taschereau, who was a very attentive listener, informed the deputation that the memorandum submitted and representations made by them would be given his most serious consideration and that the Limit Holders would hear from the Government just as soon as the question had been studied.

Will Build Large Plant Near St. John

W. G. Clarke, chairman of the Board of Directors of Clarke Bros., Bear River, N.S., who was in Halifax recently, confirmed the report that his firm would establish a large paper product enterprise at Glen Falls, near St. John He said that they have been assured of hydro-electric power within a year and that the plant would employ between 200 and 300 men.

Mr. A. G. McIntyre, former secretary of the Canadian Pulp & Paper Association, and latterly newsprint expert for the American Daily Newspapers publishers, states that the large building at Glenn Falls, formerly used by the Ford Motor Co. of Canada, and owned by Hon. Wm. Pugsley, had been secured. The structure is a modern one with good railway connection, which will be used by the new owners in the manufacture of fibre shipping-cases, containers, butter boxes, etc., part of which will be shipped to England and Australia. Mr. McIntyre, who is president of Clarke Bros., Limited, says that sulphate pulp will be brought from the large plant at Bear River across the Bay of Fundy and landed at St. John. It will then be taken to Glenn Falls by motor truck and there manufactured into board and boxes.

The sulphate pulp plant of Clarke Bros. at Bear River, which is now nearing completion, will have an output of 50 tons a day. Machinery is being installed and an extension finished, which increases the original capacity from 30 tons to 50 tons.

Machinery will soon be installed in the new container plant of Clarke Bros. at Glenn Falls, and it is expected that the new industry will be in operation early in the summer.

Get Too Many Sap Stained Clears

Vancouver Lumberman Thinks Fluctuations in Prices Too Frequent and Ontario Sizes Will Soon Be Cut

Writing to the "Canada Lumberman" a wholesale lumberman from Vancouver, who recently spent several weeks in the East, covers points of timely interest and his letter is well worth perusing. He says:

One of the things which struck me most when in the East regarding British Columbia lumber business is the difficulty that your men frequently have with sap stained clears, and from several sources I had complaints along these lines. It seems that many of our British Columbia mills are guilty of the practise, or at any rate of carelessness, shipping green lumber containing more or less sap wood. This piled in the box cars without air space seems to generate a certain amount of heat, the sap runs and stains otherwise clear lumber, spoiling it for factory purposes for which it is intended. Most of the small mills out here have not dry kilns, and in many cases they have not very large piling ground capacity. Also, their bank account strongly resembles Oliver Twist's porridge plate after a certain occasion, the result being that they earnestly desire on their own account, and are persuaded by the banks to get their lumber on the rails as quickly as possible. This, no doubt, accounts in part for some of the sap stained lumber that is shipped. On the other hand, I would point out that the Ontario buyer purchases and pays a price for green lumber, so that to some extent he should take up the burden. The real trouble, however, seems to exist in the fact that the British Columbia shippers cannot always separate sap wood from lumber that does not contain sap wood.

Another complaint is the fluctuation of prices on the Coast, and their consequent disorganization of quotations in Ontario. This, of course, is partly accounted for by the limited capital already referred to. The influence of the United States market, which is very irregular, also operates in this connection very materially.

There is another factor also, namely, standard British Columbia sizes, and Ontario sizes. As you know, British Columbia standard sizes call for a thinner piece of lumber than the Ontario sizes. In other words 2 x 4 standard B. C. size is actually 1.5/8 in. thick, whilst the Ontario size is 1¾ in., or in trade parlance, ¼ scant. It is my contention that the thinner piece of British Columbia fir is quite as strong as the thicker piece of Ontario hemlock, and is equally serviceable for all practical purposes. It is just a matter of appearance, and of course the ultimate customer usually considers the size of the lumber rather than its actual strength.

The British Columbia mill man is quite willing to manufacture ¼ scant, but he is up against this difficulty; that his prairie market calls for the ⅜ scant, and to manufacture both sizes would mean two separate piles or piling areas. This, in itself, is practicable, but he is then up against the danger of some "bohunk" yard men mixing the thickness and placing prairie standard lumber in a car intended for Ontario shipment. At the same time, the British Columbia mills will, I believe, in fact they are in some cases now arranging to manufacture the Ontario sizes, and as the Ontario demand increases no doubt they will cater more and more to the Ontario dealer's wishes. Against this, however, I would point out that the extra ⅛ in. thickness adds approximately over $2.00 per M. to the freight rates, and it is a question in my mind whether or not the Ontario dealers and ultimate consumers could be persuaded to accept British Columbia standard thicknesses and save that $2.00. They may think they are passing it to the mill, and probably they are in times of stress like the present, but generally speaking the consumer pays freight.

Breezy Happenings From The East

Work at the Restigouche booms has stopped for the year. A large amount of lumber has been held over until next season, estimated at 15,000,000 in the south boom and over 20,000,000 in the north boom.

At the meeting of the Forest Advisory Board the inroads made by the spruce bud worm in the forests of the province, particularly in Northumberland county, were discussed. A recommendation on this matter will also go to the lieutenant-governor-in-council.

The River Valley Lumber Company's saw mill at Oromocto was shut down recently after a successful season's work. The company has a large quantity of logs left over and will hold them in the Oromocto River until next season. It is the intention of the company to operate a camp this winter at the Barony, York county.

The general expectations that the lumber cut in this province during the season of 1920-1921 will not be more than half is justified by late reports coming in from all sources. Some say they will curtail their operations much more than fifty per cent., and some maintain they will not cut at all. One of the firms, which has decided not to operate is the Burtt Lumber Company with mill at Burtt's Corner, York county. Three and a half million feet are being carried over by this concern. A contract for some ten thousand cords of pulpwood has been taken by this company and preparations made for the sending of crews to operate, but it is understood that the contract was cancelled. Labor conditions are causing an uncertainty, which is having a tendency to make operators cautious.

It is proposed to export burnt lumber to the United States from Crown lands as pulpwood. The act of 1911 forbids export of lumber in the round to the United States, the intention being to encourage the manufacture of lumber in the province. On recommendation on this matter will be presented to the lieutenant-governor-in-council.

New Brunswick lumber operators are proceeding cautiously with their plans for the season's work. Those, who have the courage to take a chance in view of the uncertainty of the market, are depending on conditions bettering. As we previously stated, this year's cut in the woods will be not more than fifty per cent. of normal. Many operators feel they have gone the limit in logging. Prices for manufactured product wavering, mill yards filled and the demand light, is the trying situation which is facing the lumbermen in this province.

At a meeting of the Forest Advisory Board held recently in Fredericton. Hon. C. W. Robinson, Minister of Lands and Mines; Archibald Fraser, Col. T. G. Loggie, the Deputy Minister of Lands and Mines, and G. H. Prince, Provincial Forester, attended. A delegation consisting of W. B. Snowball and J. W. Brankley of Chatham, and Hon. J. P. Burchill of Nelson, were heard and presented a petition asking the Board to allow a reduction of approximately one-third in stumpage rates on lumber cut upon burned over lands. The request is being considered. At the meeting J. D. Vanderbeck, M.P.P., tendered his resignation as a member of the board of examiners of fire rangers. No appointment will be made to the vacant office until the next board meeting, January 12.

May Employ Japanese in Lumber Camps

Keen interest is being taken in a recent finding of the Court of Appeal, which has just handed down a decision that legislation of the province of British Columbia and orders-in-council under it, are ultra vires, in that the provisions of the Japanese Treaty Act. 1913, of the Dominion, and the treaty made by Great Britain with Japan, were interfered with. In April, 1902, the B. C. legislature passed an act prohibiting the employment of Chinese or Japanese in all contracts, leases and concessions from the government. This measure had been enforced by the Forest Branch of the Department of Lands, and last June, after the Japanese consul had taken the matter up, both with Ottawa and Victoria, the question came down to issue before the Court of Appeal, which heard argument and at that time reserved judgment. A considered decision has just been handed down. It was pointed out by the court that the Japanese Treaty Act had the force of law in Canada and therefore displaced any legislation, either Dominion or Provincial, which conflicted with it. It was also specifically declared that "it would be ultra vires of the legislative assembly to enact or authorize the passage of any order-in-council providing for insertion in any contracts, leases or concessions, any inhibitory provision that no Japanese shall be employed."

Model Town Will Be Spruce Falls

The Ontario Government has practically completed plans for a model town on the Kapuskasing River at the Canadian National Railway crossing. At the next session of the Legislature, it will be incorporated as a municipality to be known, not as Kapuskasing, but as Spruce Falls.

By an agreement with the Spruce Falls Pulp and Paper Company, in return for the power privileges of the Falls, the Government has retained a section of land totalling nearly nine hundred acres.

The purpose of the Government is to establish an up-to-date town for the workers of the paper and pulp plant, where they may own their own homes and property, have every freedom of a citizen and not be dependent upon the private company. It is the first time that any Canadian Government has ever planned such a scheme.

Power for the use of the citizens will be supplied at cost.

As the Government owns the land, no citizen shall be debarred from entering the town. The houses will be built under the direction of the Director of Housing and on lots measuring 60 feet by 120. And in this connection the Government will issue debentures up to $400,000, as under the Housing Act.

The old Kapuskasing station is situated on the west side of the river, but under the new plans, it will be removed across to the new town.

Another feature of the town will be its absolute protection from forest fires.

The company expect to be in full operation by the first of May next year, and expect also to have spent $4,000,000 by that time. Since September the first, the sum of $700,000 has been expended. They will develop 10,000 horsepower and have an output of 130 tons a day.

British Lumber Trade Difficulties

Solution of the Housing Problem Would Mean Absorption of Much Accumulated Stocks

By F. H. Devenish, Montreal

Industrial conditions in Great Britain are not satisfactory. The Old Country is taking a very long time in readjusting itself to the new state of affairs created by the war, and in the process there have been social and industrial upheavals which do not make for the smooth working of the commercial machine. No doubt matters will right themselves in the course of time, but, in the meantime, there is certain to be further industrial disturbances and conflicts, causing bitterness on the part of employers and employed.

The British lumber trade is having its share of trouble. During the war the trade enjoyed great prosperity, but this has been followed by a reaction, due to the higher cost of doing business, accumulation of stocks, lack of building, and a falling off in general commerce. The cost of handling lumber in the Port of London, for instance, has increased from two to four times on the old rates, and the men, besides adopting a very independent attitude, are not giving the results as in pre-war days. Irritating delays are frequent, and owing to the strong organization of the men, it is next to impossible to remedy the condition. Lumber stocks of every description, and from all parts of the world, have accumulated at every port, consequent upon the lack of demand. A certain amount of building is being done, but it is out of all proportion to the needs of the country, especially in the matter of houses.

Many Housing Schemes Ineffective

Canada has no conception of the famine in houses, which exists in Great Britain. The Government has formulated several housing schemes, not one of which has had any effect in appreciably increasing the accommodation. By Act of Parliament owners of houses were prohibited from adding to the rents during the war, neither could a tenant be turned out, an advance of 30 per cent on pre-war rents has just come into operation, but the tenant who pays the additional rent has still the right of occupation. At the same time, the cost of building has increased threefold, with the result that investors have not, and will not, put their money into new house property. It is obvious that, with the cost of construction trebled, and with rents only 30 per cent. higher there is no chance of even a small return on any capital expended. The civic Councils are endeavoring to deal in a partial way with the situation, and are erecting houses with money borrowed at 6 per cent., but the rents to be charged in many instances will not pay even the interest on the borrowed money, and the deficit will have to be made good out of the rates.

One outcome of the scarcity of houses is that residences, where vacant, possession can be obtained, are fetching on sale, three to four times their cost. The purchasers recognize that there is no possibility of securing a return on the investment, this, however, is a small matter compared with the fact that they are obtaining a place to live in.

The Outlook For Canadian Exporters

The industrial situation, and the housing question in Great Britain are of interest to the Canadian lumber trade. As exporters of lumber, conditions in the Old Country which decrease the consumption of Canadian products affect us vitally. Unless there is a change, manufacturers of spruce, pine, birch and fir in particular will have to reduce their output; exporters' business will be diminished, and in the competition which always ensues on a slow market, profits will be cut to a minimum, especialy in a country like Great Britain, which receives lumber from all over the world. Such a condition is bound to be reflected in our domestic market. Manufacturers who usually make for Great Britain will, in the absence of an export demand, naturally endeavor to place their goods in Canada, with a consequent tendency towards a lower range of values. In this way the entire industry in Canada will be influenced.

For the time being, trade in Great Britain is slowing up; it may be only a temporary condition, as the Old Country, in spite of the unsettled outlook, has a wonderful way of over-coming trade, social, and political difficulties. The solution of the housing problem would mean the absorption of much of the accumulated stocks of lumber, and would also help in a revival of trade, in which Canada would participate.

Bright Meeting of Toronto Wholesalers

Interesting and instructive in every respect was the regular monthly meeting and dinner of the Wholesale Lumber Dealers' Association of Toronto, which was held at the Albany Club, Toronto, on November 19th. There was an exceptionally large attendance, many firms having several representatives present. The gathering will long be remembered for its pleasant associations and good fellowship. Song sheets were distributed, and, led by D. C. Johnston, of the Union Lumber Co., the vocal efforts were well sustained. Mr. Johnston has the happy faculty of imparting vitality to anything that he undertakes and he kept himself and the banqueters on the move. Then, another feature was the process of introduction whereby each one present had to arise and present the person next to him, calling him by name and announcing the firm with which he was associated, etc. This was a welcome item on the programme and there were also a number of solos contributed, among them one by J. L. MacFarlane of the Canadian General Lumber Co. A roll call was also inaugurated and a record will be kept of the attendance in order to arouse as much interest and enthusiasm as possible. Over 75 per cent. of the firms, who are members of the association, were represented at the gathering.

A. C. Manbert, chairman, presided, and was in a particularly happy vein. Under his direction everything went along smoothly and the business was soon disposed of. Alex. Gordon reported for the Membership Committee that several new firms have recently joined the association, among them being the W. M. Ritter Lumber Co. of Columbus, Ohio. The membership is now 40, which is practically double what it was when the organization was formed nearly three years ago.

H. G. McDermid, chairman of the Bureau of Information, gave an interesting report, which stirred up the members on the point of action and co-operation, and afterwards short addresses were made by Bert Fonger, of J. G. Cane & Co., Toronto; T. N. Phillips, of Timms, Phillips & Co., Vancouver; John Hall, Canadian representative of the W. M. Ritter Lumber Co., Columbus, Ohio, and T. R. Dunn of the T. R. Dunn Lumber Co., Winnipeg. Mr. Dunn conveyed greetings from the association in the prairie provinces.

Roy Halliday, traffic manager of the R. Laidlaw Lumber Co., Toronto, gave a timely and comprehensive talk on "Transportation Routing and Rates." He went into details, giving valuable information on the weighing and loading of cars, competitive points, dressing in transit, the most economical routing, basis of tariffs, deliveries, etc., and told of the best methods of facilitating shipments, presenting claims and adjusting differences. Mr. Halliday was warmly thanked by the chairman for his instructive remarks.

The main event of the evening was the thoughtful and earnest address delivered by A. L. Boyd of Toronto, manager of the Sheldon School of Salesmanship, who spoke of the personal element in business. In his introduction Mr. Boyd said that he had been greatly impressed by the spirit of good fellowship which permeated the members of the Wholesale Lumber Dealers' Association, as was evidenced by the proceedings of the evening.

A full report of Mr. Boyd's able remarks is held over until the next issue of the "Canada Lumberman."

Eastern Mills Putting in New Equipment

The Continental Lumber Co., whose mill at Charlo, N.B. was burned down some time ago, is being rebuilt and the new plant will have a circular outfit complete. The company will have a 20′ diameter refuse burner 80′ high, together with a rotary saw, steam feed and carriage equipped with 4″ steam set works, which along with the rolls, transmission machinery, etc., are being supplied by the Wm. Hamilton Co., Ltd., of Peterboro. The Continental Lumber Co. will also install a Kendall gang circular to take up to 8″ cants.

R. O'Leary, Richibucto, N.B., is making extensions and additions to his sawmill and boxboard plant. He is installing a new rotary, transmission machinery, furnished by the Wm. Hamilton Co., Ltd., of Peterboro, Ont.

Big Lumber Order from Europe

The biggest order for hardwood lumber from Europe since prewar days is reported in Chicago, and it is believed to foreshadow heavier lumber buying on the part of foreign interests. A syndicate largely representing European furniture manufacturers, has placed an order in Memphis for 50,000,000 feet of hardwood lumber, one hundred cars to be shipped immediately. Financial arrangements have been completed through New York bankers who are interesting themselves because they want to encourage the export of raw materials to help foreign exchange.

How Spruce Wood Grows in Value

A new record was set in Ontario recently for the price of spruce when 50 square miles situated near Jellicoe on the Canadian National Railways, and east of Nipegon Reserve, was disposed of to J. T. Horne of Fort William. The price paid was $6.10 a cord for spruce and 21c a tie for jack pine. A few days ago $6.05 was the highest bid for spruce and previous to that $3.46 was the largest tender. This shows the growing value of pulpwood and would indicate that there is not likely to be any drop in that line for, at least, some time to come.

Second Hand Machinery & Equipment Wanted & For Sale

Quick Action Section

Special Lots Of Lumber—Positions Wanted & Vacant

Lumber Wanted

WANTED—A block of White Pine and No. 1 and No. 2 Hemlock for delivery next spring and summer. State approximate quantities and lowest prices. Box 428, Canada Lumberman, Toronto. 23

We are in the market for

1 x 9" Merchantable Spruce, car lots.

Quote delivered Philadelphia, Pa.

MELL & SONS,
22-23 Philadelphia, Pa.

Wanted

A few cars of Birch No. 1 Common and Better, 4/4 to 16/4. Name us your best price delivered here, on grades.

WARREN ROSS LUMBER CO.,
18tf Jamestown, N.Y.

PULPWOOD

We are open to purchase peeled Spruce and Balsam Pulpwood in carload lots. Quotations furnished on request.

The Jost Company, Limited,
285 Beaver Hall Hill,
1-t.f. Montreal, P.Q.

Pulp Wood

We are prepared to buy unlimited quantities of peeled poplar and hemlock and peeled or unpeeled spruce and balsam pulpwood.

ADVANCES MADE

Thompson & Heyland Lumber Company, Limited,
12-t.f. 123 Bay St., Toronto.

Lumber For Sale

Pulpwood For Sale

1920-1921 Delivery

3,000-4,000 cords Spruce and Balsam.
1,000-1,500 cords Poplar.

JAMES THOMAS CLAIR,
11-t.f. Clair, N.B.

For Sale—White Ash

1 car each 1", 1¼", 1½" and 2" No. 1 Com.
1 car each 1", 1¼", 1½" and 2" No. 2 Com.

Dry Northern stock of good texture. Can ship immediately at attractive prices. Also have good stock other grades and thicknesses one inch to four inch. Address Box 426, Canada Lumberman, Toronto. 23-24

For Sale

115,000 ft. White Pine Lumber, classified as follows:—

1"	25,000
1½"	13,000
2"	64,000
3"	13,000

This cut of lumber, being out of large trees, runs very wide, and is well sawn. It was sawn in the months of January and February, stuck-up and covered and should be ready for shipment very soon.

For further particulars apply to J. A. Farnsworth, Cookshire, Que. 15-t.f.

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 25 cents per agate line (14 agate lines make one inch). $3.50 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Selected Trimmer Ends

8 to 10 cars White Pine Selected Trimmer Ends for sale. For prices and particulars apply JOHN B. SMITH & SONS, Toronto, Ont. 23

WANTED—Thoroughly reliable, experienced and competent head sawyer for our factory at Rodney, Ontario.

CANADA WOOD PRODUCTS CO.,
23 St. Thomas, Ontario.

Man wanted to take charge of Sash Department in a city planing mill. Must be competent and be able to run machines as well as lay out sash. Apply Box 132, Canada Lumberman, Toronto. 4-t.f.

Salesman Wanted

An old established wholesale lumber firm requires the services of a first class salesman for Ontario and the Maritime Provinces. One having a knowledge of B. C. Coast products and the Door trade will have a preference. Must have a good connection. None others need apply. A liberal salary paid to a first-class man.

Apply with details as to salary required and experience to

Box 424, Canada Lumberman, Toronto. 23-24

Business Chances

New York export house of excellent financial standing, managed by Canadian, will consider arrangements for representing a good Canadian lumber company for New York local and export trade. Apply in first instance to E. I. Brown, 111 Broadway, New York City. 23

FOR SALE—SAWMILL COMPLETE with planers, etc.; capacity 25,000 daily; located on G. T. P. near Pacific Coast. Reasonable terms can be arranged for mill and standing timber. For full particulars apply Box 291, Edmonton, Alta. 22-25

Wanted

Spruce pulpwood timber in fee simple, large or small tracts, Ontario or Quebec. Also exportable Spruce wood, rail or water shipment. Answer with complete information and plat. Box 413, Canada Lumberman, Toronto. 22-23

FIRM MANUFACTURING High Class Interior Finish want experienced men in towns within shipping distance of Montreal to solicit business and book orders on a percentage basis. Good opportunity for men carrying on small carpenter or repair business.

Apply for full particulars to Box 11, Station "C", Montreal, Que. 22-25

Saw Mill For Sale

Complete 50,000 ft. capacity Circular Saw Mill for sale. 3 boilers over Dutch ovens, steam feed circular, live rolls, belted throughout with leather, rubber and canvas belting. Mill building 120 x 38 with extensions built of heavy timbers and easily removed. Small cash payment, balance easy terms on good security.

Box 427, Canada Lumberman, Toronto. 23-24

Open for sawing contract, New Ontario preferred. Mill capacity 20M. Box 373, Canada Lumberman, Toronto, Ont. 23

For Sale—Timber Limits

187 Square Miles in province of Saskatchewan, including Saw Mill, Planing Mill and general equipment such as Logging Engine, Tanks, Rutters, Snow Plows, 30 sets McLaren Logging Sleighs, etc., etc., For further information address the Saskatchewan Lumber Co., Limited, Crooked River, Sask. 22-25

McLaurin Bros. Limited

FOR SALE

This business of retail lumber is for sale as a GOING CONCERN. It is situated in Lachine, just outside Montreal, on the Grand Trunk Railway, and has been established about 30 years.

The plant comprises a planing mill and factory of two storeys, dry kiln, and storage sheds, besides yards with Grand Trunk siding. The plant, which is also near the St. Lawrence and C. P. R., covers an area of over 76,000 feet.

The reason for the disposal of the business is that the owners intend to devote their time to the wholesale trade exclusively.

Full particulars of the plant and the business turnover may be had on application to McLaurin Bros., Limited, Lachine, P. Q. 23

Lumber Property For Sale

About 8,000 acres (held in fee) of lumber lands estimated to contain about 30,000,000 sp. feet of merchantable soft wood.

As a pulp wood proposition, this property should contain 60,000 cords or more.

Included with the lands, is a saw mill, equipped with Dutch furnaces, Waterous edger, planer and lath machine, and situated along the line of the C. N. Railway, the port lies within three miles of the mill, so that water shipments may be made as well as rail.

All the lands are within easy distance of the river, and stream driving does not exceed a distance of more than six miles.

For further information apply to

E. A. SMITH,
Shediac, N. B.

SAWDUST GRATES WANTED: about 75 sq. feet, good and heavy, 4 or 5 ft. long. French River Lumber Co., Bigwood, Ont. 23-24

TENDERS for Pulpwood and Timber Limit

Tenders will be received by the undersigned up to and including the **18th day of December, 1920,** for the right to cut forest products on an area in the English River Water Shed.

Tenderers shall state the amount of lump sum cash bonus they are prepared to pay, which sum shall be in addition to the rates of Crown Dues fixed by Order in Council dated 27th day of March, 1920.

Parties making tender will be required to deposit a marked cheque payable to the Treasurer of the Province of Ontario for the entire amount of the lump sum bonus specified above, which lump sum shall be forfeited to the Crown if the successful tenderer does not enter into an agreement as provided in conditions of sale.

The highest or any tender not necessarily accepted.

General terms and conditions of sale may be had by applying to the undersigned.

BENIAH BOWMAN,
Minister of Lands and Forests.

Toronto, September 24th, 1920.

N.B.—No unauthorized publication of this notice will be paid for. 23-24

Sale of Timber

Tenders will be received by the undersigned up to and including **Friday, the 31st day of December next,** for the right to cut the timber on the south half of the Township of Shackleton, in the district of Temiskaming.

Terms and conditions of sale and further particulars may be obtained upon application to the undersigned or to Mr. Dalton Spence, Acting Crown Timber Agent, Cochrane, Ontario.

BENIAH BOWMAN,
Minister of Lands and Forests.

Toronto,
November 2nd, 1920. 23-24

The Wastage of Timber

Dominion and provincial authorities throughout Canada, while drawing attention to the vast wealth latent in our forests, have at the same time issued warning notes as to the economic limits of forest exploitation, in view of the large percentage of natural as well as avoidable wastage and the impossibility of estimating with any degree of accuracy the annual increment in growth. The total wastage of timber every year from fire, decay, windfalls and floods is estimated at nearly 2,500,000,000 cubic feet, which is approximately five per cent. of the standing merchantable saw-timber in Canada. The annual pre-war cut of saw-timber was 900,000,000 cubic feet, and of pulpwood over 200,000,000 cubic feet. The processes of felling, transporting and milling reduce the output to about 40 per cent. of the cut in the case of saw-timber and 80 per cent. in the case of pulpwood. The average volume exported annually during the immediate pre-war period was the amount derived from a cut of 350,000,000 cubic feet of saw timber and 100,000,000 cubic feet of pulpwood, or 39 per cent. and 50 per cent. of the respective total cuts. This does not include the large quantity of pulpwood manufactured in Canada into pulp or paper and exported in these two forms. The proportion between the output of saw-timber and that of pulpwood has considerably altered during the last decade. The Dominion Forestry Branch describes the situation as follows:

The consumption of timber for lumber manufacture has decreased since 1912 and is still decreasing. The estimate of the total supply is based on inaccurate and incomplete data; the maintenance of the supply depends on the unknown increment rate and the very uncertain factor of loss through forest fires. It is probable that the consumption will continue to decrease in the future as the source of supply moves back farther from the lines of transportation each year. The cost of lumber in Canada will probably increase until it becomes profitable to plant potential forest land with commercial species, and to pay for efficient protection and management of the remaining forests. In the case of pulpwood the utilization is increasing rapidly as supplies are being exhausted in the United States. The United States is Canada's chief customer for unmanufactured pulpwood, woodpulp and paper, and with the increasing consumption of newsprint and other papers brought about by increased advertising, it would appear that Canada's supply would be exhausted long before the four hundred years obtained by an arithmetical calculation.

As long as forests products are comparatively cheap, as they are in Canada at the present time, no extraordinary care will be taken to protect and develop them. As the price of these products increases, it will become more and more profitable to do so. The immediate steps necessary are connected with protection from fire, insects and fungus diseases, and careless or destructive utilization. The regulation of cutting, with a view to natural regeneration, is a more valuable means of re-establishing forest areas in a new country like Canada than any expensive system of replanting.

Since the war British toymakers have made strong efforts to supplant German toys in British markets. A number of new firms have begun manufacturing and old firms have extended their production. Toys from wood, wool and fibre are made in London, Liverpool and Manchester, as well as a few other cities in England.

Although toy manufacture is a new industry for Belgium, it is becoming a national industry. Many wooden toys are made, including thousands of toy horses. French national production of toys is sufficient to supply the home market and it is reported that no German toys are being imported into France.

TIMBERLANDS FOR SALE

We have many attractive properties listed with us, for sale, in all parts of Canada and Newfoundland, in both Freehold and Crown lands.

BRITISH COLUMBIA
Large tracts of Cedar and Spruce situated on tide waters and the larger rivers, with or without saw mills.

NEW BRUNSWICK
Some very fine Freehold hardwood properties.

NEWFOUNDLAND
More than 3,000 square miles of the best timbered pulpwood land in the Colony.

ONTARIO
Many pulpwood and hardwood tracts, both Freehold and Crown land.

QUEBEC
Some excellent Freehold properties running heavily to pulpwood. Large pulpwood limits on the Upper Ottawa and on the North and South Shores of the St. Lawrence.

Cruiser's reports and blue prints, where available, will be sent to Principals or their accredited agents.

Review of Current Trade Conditions

Ontario and the East

There is little now characterizing the general lumber situation except that there have been some declines in prices of western stock and also in eastern hemlock, and jack pine. According to one wholesaler, the result is that, instead of buying being stimulated, it is even more different, as "such a course indicates that prices have not yet touched rock-bottom, and until the trade is convinced that they are as low as they possibly will or can go, there will be a certain amount of hesitancy." Only isolated carloads for immediate requirements are now being sold, and, while inquiries in some lines are picking up a bit, there is not likely to be any strong demand for lumber until after the new year, and probably, it will be February or March before a revival in trade sets in. Some firms are doing a moderate amount of business but nothing like what is customary, although it is generally admitted that December and the last weeks in November are usually quiet periods.

There is a disposition on the part of manufacturers, wholesalers and retailers to proceed cautiously in all undertakings, and wood's operations are, on the whole, being conducted with considerably less aggressiveness and with fewer men in camps than a year ago. Some firms have taken their travellers off the road as they do not believe that anything is gained by calling upon retailers when the latter are not buying. Manufacturing concerns are also rather quiet and will not be known until next year just how the building situation is going to shape up and how extensive will be the demand.

While stabilized prices would, it is thought start building, there is little likelihood of falling prices doing so. It is the experience of building trades and retail lumbermen that stationary quotations or a rising market have always resulted in more structural operations being put under way. One large concern, which has given special attention to the situation, says that if material men would give assurance either to reduce prices or to standardize them so that the contractor, when figuring on a building, would know what price he has to pay for his material, as well as for his labor, it would be a long step toward solving the building problem.

In trade circles, the principal theme of discussion is not how business is—because everyone knows, but when will the present dull period terminate and some of the former activity be witnessed. Western mills are closing down to an extent never known before. Logging camps are ceasing operation, shingle plants are idle and stocks of B. C. products are generally low. Prices have been cut in an effort to get rid of some of the stuff on hand, but even this has not resulted in moving very much of the material. If there should be a sudden revival in the lumber line and a call for heavy quantities of B. C. siding, shiplap, interior trim and dimension, there might be some difficulty in securing what is required.

It is impossible to tell, with any degree of accuracy, what the future holds in store for the lumber industry. In the weeks before the war it was not difficult to foresee events and to gauge production and distribution accordingly. Those were the days when practical business men, who were experts in their own calling, felt themselves on pretty sure ground. They took a survey of the future, and, basing their predictions on past experience, and insight, were able to foretell within certain limits what was going to happen. Of course now and then they were somewhat wide of the mark, but there was a reasonable amount of assurance and importance attached to their declarations. These predictions did not take in the speculator, who is always bound to have his fling, but the sane, hardheaded business man felt that he knew market conditions and knew them intimately. He had an idea of the course of development in his particular line and could give an opinion whether values were likely to rise or fall.

How different is the situation to-day. Recent conditions in the financial, labor and industrial world, have upset all calculations, and the questions are too big for the average man to sit down and view calmly and confidently. Many prognostications are upset and all the traditions of the past shattered. Everything has gone askew and theory, while it sounds well, has been given little credence.

The hardwood market is rather quiet at the present time although a few more inquiries have been received than there were last month. Stocks are declared to be below normal, particularly in the upper ends. Some firms are advising buyers to make their purchases now and not delay because they are convinced that values have struck bottom, and if there is any further waiting, it will only result in inflated quotations when the demand re-asserts itself. Delayed purchases are said to have been the cause of the speculative figure which developed on many lines of stock last spring, and if consumers would gauge their wants with reasonable accuracy and purchase before they are actually up against a serious proposition, much would be done to clarify the atmosphere and impart to the general situation strength, conservation and stability.

The stock of lumber with most retailers is getting low but still the decreased prices do not seem to tempt buying at the present time beyond a few sorting-up orders. So far as stocking up, there is nothing doing in this particular line at present. There is practically no market for shingles.

Some large concerns in Toronto have been figuring on a contract of a million feet of lumber for the proposed live stock arena, which it was thought would be erected during the coming season, by the Canadian National Exhibition, but supplies in other lines have been so slow that there is a probability of the work not going ahead in 1921. Other large projects are reported but it is not definitely known whether or not they will proceed.

Construction figures for Ontario showed a decline during October, the total standing at $5,154,800 compared with $7,905,600 a year ago. Quebec was to the fore with a total of $7,674,700 in contracts awarded. The new $5,000,000 match factory for Maguire, Patterson and Palmer, Ltd., near Quebec City, accounted for two-thirds of this figure. Contracts in the Maritime Provinces were in excess of those of the present month, the latest figures standing at $2,372,900, or an increase of $641,600.

There was a big drop in the West, the total value of new contracts awarded being $2,967,400, compared with $7,447,500 for the previous month. An enormous gain is recorded, however, for the first ten months, this year's total standing at $62,462,500 against $24,035,400 for 1919.

United States

While business has been very dull for many months and prices have been dropping, there is some improvement noticeable in general trade indications. Lumbermen generally are expecting an early market improvement. Inquiries are becoming a little more plentiful and the trade generally is taking courage. No radical betterment of conditions is looked for until the new year. The very fact that there is a change in sentiment is a hopeful omen. At a recent meeting of a lumber association, held in the South, the president succinctly summed up the situation when he said: "Lumber is in a particularly strong position and we should not be the least apprehensive about the outcome. With the world-wide shortage of houses, with the railroad requirements running into billions of feet, and with the latent demand for industrial purposes almost as great, trade is bound to return sooner or later, and when it does, augmented by the pent-up demand, it will tax the capacity of the mills.

That a healthier note is developing and that reports from all sections of the country are either cheerful or re-assuring, is putting heart and spirit into some of the laggard ones who have been inclined to view things in a sad, dismal light. True, there is a period of some hesitation and a disposition to wait until manufacturing generally develops to a larger extent, but, with the prospects of an active building season, there should be a steady and sure upward movement.

In the hardwood trade there has been some strengthening of market values ,not so much from a domestic demand as from orders received from foreign sources. During the last few days some nice business has been booked by different concerns, and this has led to the idea that a beginning has at last been made in the long-expected foreign buying. The domestic market for hardwood, however, is quiet, and it is not expected that there will be any decided revival in industrial buying until after the new year. Meanwhile the production of hardwoods is being aggressively curtailed. This condition will continue until manufacturers see a definite improvement in market conditions.

So far as conditions in the South are concerned, a recent despatch from Jacksonville, says: A majority of the small mills and many of the large ones in this territory have shut down and most of those running are operating on short time. There has been a rather general wage reduction of 20 to 25 per cent. and production costs also are being lowered by cutting down forces and doing the work with a smaller number of men. Some of the big mills when reducing wages also made at the commissaries corresponding reductions in prices of necessities, many of which are being sold at cost or below. There is a general slowing down of production and a sustained buying movement for even a short time would practically clean up assortments

in shipping condition. Inquiries are growing more numerous and there are indications of an early improvement in demand.

Word from Memphis is to the effect that an order for 50,000,000 feet of southern hardwood lumber, including practically all grades one and two inches in thickness, for shipment to overseas markets, has been placed by a European syndicate with a Memphis firm. The first 100 cars, involving approximately 1,500,000 feet of hardwood lumber, will go forward immediately. The balance will be shipped as rapidly as three combined firms can fill the order. Placement of this huge order for hardwood lumber is a part of the enormous plan under way to re-establish the European balance of trade and thereby stabilize foreign exchange. Financial arrangements involved in the deal have been made with one of the largest banks in New York city, which has agreed to make all collections and remit to the Memphis firm. The announcement brought to light several other export orders which have been received by Memphis lumbermen within the last few days, all tending to indicate that the export market is reviving.

Great Britain

It is difficult to analyze the lumber situation at the present time. There are so many current and cross-currents that it is difficult to analyze the business situation. Business has been at a very low ebb for some time and the depression caused by the recent strike has been somewhat counteracted by energetic measures taken by the authorities to advance the pace of house-building. It is announced that buying on f.o.b., terms is almost at an end for the season, and c.i.f. purchases have been small and confined to bills of lading containing current sizes and these have been offered cheaply.

It cannot, of course, be denied that a drop of some pounds per standard has now occurred on practically all classes of wood, except certain sizes in favorite stocks, and in specialties, says "Timber." "Has the bottom been reached?" is the question now occupying the minds of all. Two main influences have been at work—the difficulty of financing large stocks, and the slow pace of the consumption. Not anticipating such a dragging market, many importers purchased, as it turned out, too heavily, and they have been forced to liquidate a portion of their stocks. Others took a wrong view of the market, and, finding their contracts unprofitable, decided to cut their losses before any further fall occurred. A contributory cause to the dullness of business has been the coal strike, which, in its earlier stages, when there was a fear of the transport workers participating in the struggle, caused a good deal of nervousness. We think, however, that there are now signs of a better tone. The long period of inactivity, or rather of hand-to-mouth business, has left a big latent demand to be filled up directly merchants are convinced that the time has come to purchase, and this time will, we believe, arrive as soon as the shipping season is over, and the pressure of forced sales at all sorts of prices ceases to disturb the market. November is certainly opening with a little more business, and although there is no sign of any higher figures, there is more disposition to buy, and this, in itself, is very often an indication that the pendulum has commenced to swing in the opposite direction. The moment this is evident, a fairly brisk trade is to be anticipated, simply for the reason that there are many buyers merely waiting for the right moment to arrive.

In a general review on declining trade, a correspondent of "The Timber Trades Journal" says reduced volume of trade necessarily means less employment all round. The reasons for the slowing down of the wheels of commerce, when examined, are found to be largely high prices, restricted credits and demoralized foreign exchanges. In the home trade, high prices have checked consumption in many directions; wholesalers, faced with high costs for carrying goods or with the necessity for meeting bills, have lowered prices to liquidate stocks more quickly, and the import trade has been active. Foreign demand for out exports has been restricted by sheer inability to pay in sterling on the part of a large part of Europe. If foreign countries cannot take our goods because the price in their currency is too high for them to pay, our trade will suffer and our workers will feel the pinch. No one has ever found a successful way of making a man buy from another. The only way is to give him what he wants at a price that he is ready to pay. That depends upon two things: first, his purchasing power, and second, his opportunities of using that power. If our price is too high for the foreign consumer—and most countries of the world are very poor to-day—he will hunt the world for a cheaper article, and if he does not take our goods we cannot expect long to receive in return food and raw material. Our very existence depends upon our finding willing purchasers of our goods, and as this is dependent largely upon the price we ask, we come up once more against the question of the cost of production.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Quebec Business Has Not Come Up to Expectations

The timber, lumber and pulp trade is meeting with a dull market these days, as far as the business applies to the port and district of Quebec. The two shipments of sawn lumber took place from this port on Nov. 17 and 18, when the steamers Manchester, Hero and Ramore Head took on board cargo. The C.P.O.S. Victorian to sail on the 23rd and the Empress of France to sail on the 27th instant will be last of the ocean vessels this season of navigation which will carry part cargo of deals.

Up to the end of September, the Quebec lumber export trade was fairly good, and even up to the first weeks of November, considerable wood was shipped overseas. But the export to the United Kingdom was not up to expectation and this added to the dullness of the United States Market, has left the timber and sawn lumber in stock abundant and beyond the anticipation of the trade. These conditions with the decline in the price of wood, have caused the manufacturing interests to do a good deal of thinking as to their plans for manufacturing this winter. The decline in the price of wood has not, however, interfered with the demand of labor which is still in a militant mood for more money. The result is, that the big Quebec firms will not operate their limits and mills to any great extent this coming winter.

One of the heads of a leading Quebec timber and lumber firm, discussing the situation with the correspondent of the "Canada Lumberman," said there are several features in connection with the business these days, that are the cause for careful consideration. In the first place, there is the decline of prices in the market with a possible lower level, secondly the wage demand by labor, thirdly the scarcity of men required to work in the woods, they being attracted by higher remuneration for their services in the pulpwood business, and lastly, the need of money, the banks being reluctant to make the necessary advances to carry on, and tell us that we are carrying large stocks at our storage depots, which should be disposed off before entering into any further new operations.

The pulpwood interests also complain of a dull market at the present. Quebec dealers make the statement that there is no demand from the pulp and paper mills. This is in keeping with the information communicated by your correspondent in his last letter, in reference to the combine or agreement entered into by the American pulp and papr mills some weeks ago, in order to force the price of wood downwards. The dealers are in the meantime, wise to the situation, and are now forming an association to keep the prices up to the present level. Pulpwood is now stable in its price of $26.00 per cord, placed on the railroad cars at the base of supply.

On November 10th, a special meeting of the pulpwood interests of the Province of Quebec was held at the Chateau Frontenac. This gathering was called and presided over by Mr. P. M. Jost, President and General Manager of Jost Co., Ltd., Montreal, for the purpose of forming an association of all dealers engaged in the pulpwood business, for their special protection and conservation of the trade as well as stability of prices. The meeting after a preliminary discussion adjourned the subject to the call of the chairman at a later date.

St. John Trade is Slack With Small Demand

Positively no change has taken place in the trade at St. John during the last two weeks. Price really makes no difference on the volume of business as no one seems anxious to buy even at reductions, however drastic they may be.

American trade does not show any improvement and reductions of about $5 per M have not brought any increase in orders. $35.00 per M. is about the average net price on cars in this section of the country for provincial short narrow random. Many of the operators are selling with only half the exchange as their profit. Certainly if exchange dropped their entire profits would be wiped out.

The spruce board business is also dead, and boards are not bringing anything over 32c on cars net at St. John.

The prices of pine keep more steady than spruce, but only a limited amount of business prevails, and that in better grades. Nova Scotia pine prices are much lower than St. John, but the quality does not

compare very favorably with St. John both on regard to clearness and size.

Trade with the West Indies would be very good if space for lumber could be provided, but very little space is granted and this certainly is most detrimental to expansion of business. If some move is not made to force more space or sailings the lumber business from the West Indies will show a decided falling off, and be lost to Canadians for all time. The The Royal Mail Packet S. S. Co. are well subsidized and the Canadian Government should certainly see they provide enough salings to accommodate increased business.

As to factory conditions, the trade is good and does not seem to show the same falling off as many other lines, considerable new work in the interior of the country and city repair work keeps the plants well supplied with business.

Shingle and laths are extremely hard to see at all at any price, and the American prices show little profit and little demand, of course, both of these articles feel the reductions probably earlier than any other lumber line. Labor for mills and woods is very plentiful and wood wages are easier.

Ottawa Reports That Conditions are Dull

A general slump in business together with a decline in price in some grades along with the prospect that wages in the wood camps might be reduced, were the outstanding features of the Ottawa lumber market during the closing period of November.

The market on the whole was the quietest that has been experienced at this, or any other season, for a number of years. Several of the retailers and manufacturers openly described it as being "dead," and the post mortum outlook, was that a revival of trade or good business could hardly be expected for some months.

The decline in prices amounted to about five dollars per M. and chiefly effected the spruce and hemlock grades. White and red pine prices continued to remain firm, though there was practically no trading in them. Manufacturers or holders of stocks of shingle and lath did not care to give any quotations for publication for these commodities and consequently the price list in this direction remained unaltered. There is practically no demand for either lath or shingles at the present time so it is almost impossible to tell what the real market price is, for the reason that there does not appear to be any market was the comment of one of the leading Ottawa manufacturers when asked by the "Canada Lumberman" as to quotations on these stocks.

The consensus of opinion given for the decline in business was that a period of readjustment was now being entered into by the lumbering trade as well as the mercantile trade, and other lines of industry providing products for public consumption. The Presidential elections in the United States and the unsettled industrial and business conditions in many lines of industry and consumption, coupled with the uncertainty of labor, from the camp end, a month ago, were cited as being three of the chief causes for the drop in orders, inquiries, and business as a whole.

Look at it any way you want to, history shows that for a period previous and after an election, and until inauguration of the incoming government takes place, there is a falling off of business. The same applies to the last Presidential elections in the United States as it is true of any other such time in the lumber market, was the comment of a leading manufacturer. Another view taken was that much uncertainty existed in construction circles as to what was going to be done next spring. Consequently among wholesalers it was not considered good business to buy new stocks, and carry them over, unless an apparent outlet, appeared for them.

From the American yards there was practically no orders or inquiries received. Empty freight cars were plentiful and shippers with sad eyes heard of their arrival and departure at Ottawa terminals, and regretted their leaving with freight other than lumber or lumber products. A year or two ago these same cars or their twins had to be fought after by lumber companies, to get shipments already on or behind order to their destinations. During November the old order of the last four or five years was all reversed. In the great majority shipments on order were out of Ottawa and the "works" pretty well cleaned up, with everybody exhibiting a new eagerness to go after business and land it.

Bad as business was, there were no evidences of stock holders going up in the air over the situation or tossing their stocks into the open market in a panicy fashion. The stocks held have cost them a lot of money to procure with the last two years, and while ready to do business at lowered prices in some grades they are not throwing any stock away, and some of them were inclined to hang onto it until next spring.

From the woods end operations, the offering of labor was reported to be quite adequate if not plentiful, to meet existing requirements, and reports were also heard that throughout the Ottawa Valley there was to be a curtailment of bush operations. To the knowledge of the correspondent of the "Canada Lumbermen," it has been decided on the part of some companies to cut down the number of their camps.

The writer at this date feels safe in making the prophesy that the 1920-21 woods cut, will fall considerably behind that of last year and that there will be an all round come down in log production. To the north west of the Ottawa Valley and in the Georgian Bay district, some companies are not going to operate at all.

In the Ottawa Valley generally there is going to be a curtailment which is in strong contrast with the views expressed by lumber operators last August and September who apparently had mapped out or at least announced a bigger logging programme for this season.

During the latter part of September and in October the serious question arose with the operators of finding sufficient men to man their camps. Many men formerly known to have gone to the woods were attracted to other work at high wages, and the general belief was expressed that the increase in construction this year was giving employment to an unusually large number of general laborers and others. Consequently the lumber companies with an increased production programme before them were figurately "stumped" as to whether to go ahead and take a chance, or be safe and cut down the programme. The latter course has been pretty much decided upon, outside of the pulpwood companies. Consequently there is an excess of woods labor available at the present time and it is doubtful if the companies can find room in their curtailed operation to employ all those who would now go to the woods. Had the same amount of labor been available in November, been on hand in late September, a great deal different story regarding woods production might be written or told of the Ottawa Valley bush operations for 1920-21.

In addition to there apparently being an over abundance of men willing to go to the woods, there were strong rumors that there was to be drop in woods labor wages around the first of the year. Time will have a prove the truth of this, as the November labor market at Ottawa, while remaining stationary in prices in comparison with October, indicated a considerably lessened call for workers.

It is going to be one of the hardest winters that lumber companies and the transient woods workers have ever had. The production is not going to equal last year so we will not need the same number of men we thought we would, and which were not available in September for our woods operation, was the explanation of a well known Ottawa Valley lumber operation, for the decrease in the number of men he would require.

Factory conditions also felt the effect of the set back in the market, and orders and inquiries from this end remained slow.

Business Quiet in Montreal With Fairly Firm Prices

Business in Montreal is very dull. The situation is rather peculiar in that with a slow general demand, prices are fairly firm in most sections. Wholesalers report that in spruce the quotations for standard sizes are good, but that narrow widths are easier. The hardwood department is depressed.

There are indications of a slackening in general commercial activity, and it is only to be expected that the lumber trade should feel the effects of this slowing up. The fact that prices of many commodities are coming down also leads to the expectation that lumber will follow suit, and apparently buying is being delayed in the hope of a considerable reduction in values. But wholesalers do not believe that this will be the result; on the contrary, there are expressions of opinion that, with the turn of the year, the market will considerably strengthen.

The B. C. section is very quiet, and quotations are off, while firms who cater to the American market state that there is practically nothing doing.

In pulpwood, the American mills are stated to be fairly well stocked, and there is not a great deal of business passing. According to a dealer in this line, the farmers and settlers are not yet alive to the new condition, and are asking for prices beyond the market values. Mechanical and sulphite pulps have declined from the abnormal points which they recently attained.

The export season is now over, and although the official figures are not yet available, there is reason to believe that the shipments for the season are satisfactory. They will not reach those of last year, but in view of the heavy stocks in the U. K. they are larger than might have been expected.

Halifax Declares That Trade is Quiet

As a result of the falling off in the demand for lumber in Great Britain and the United States, shipments to these markets have reached a lower ebb than at any time during recent years.

During the last two months nothing has been shipped from the Port of Halifax to the English Market, except a few small liner parcels, which have met with an indifferent reception on the other side, due, in large measure, to the serious congestion of the docks at Liver-

pool and other ports. As a rule this is the time of year when British Buyers begin to exhibit considerable interest in future business, but there is nothing to date to indicate when or to what extent they will be in the market for our goods. A few enquiries are coming forward for special sizes for prompt shipment, but the general opinion seems to be that no great improvement may be looked for for several months.

The unshipped balance of the stock bought by the British Government in the spring of 1919 is now being moved into storage at Halifax, from which point, it is presumed, it will be shipped when market conditions warrant. It is estimated there will be in the vicinity of 25,000 M. feet of spruce stored at Halifax and adjacent points by the end of the year, comprising the balance of this old stock.

One of the most serious obstacles to marketing deals from the Lower Ports on the British Market is the high ocean freight rate.

It is true there has been a substantial reduction from the unprecedented rate ruling during the war, but shippers still maintain that the rate is so high as to prevent them doing business at a profit. It is now felt that in view of the enormous tonnage offering, a considerable reduction should soon be expected. The present rate of 200s. is exorbitant, and there is a strong disposition among shippers that conserted action should be taken to have the rate reasonably modified. A few years ago, the Dept. of Trade and Commerce proposed to make a full investigation of the matter of Ocean Freight Rates, as there were serious complaints received from many quarters, that the tariff charged by the Steamship Companies was excessive. Presumably before this investigation was completed the war started, and to-day we have the rates many times greater than they were at that ime. It is felt that if the demands for an investigation were justified then, that the Department should now complete its investigation under present day conditions.

Immediately after the close of the war, stocks in Britain were so seriously reduced that Nova Scotia and New Brunswick deals found a ready market at prices that left a fair margin of profit, in spite of the very high water rates then prevailing, but now that the shortage has been overtaken, and prices have declined, shippers here are of the opinion that these stocks cannot now be placed on the British market in competition with Swedish goods unless there is a substantial reduction in transportation charges.

The American Market remains inactive and shipments have almost reached the vanishing point. Reports from across the line indicate that the yards have very small stocks on hand, and the opinion is expressed by some exporters that early in the New Year we may expect to see a decided improvement take place, while others think that no great change in general business conditions may be expected until after the new Administration takes office in March.

The demand locally shows little change. Prices are about stationary, but little stock is moving. This is not unusual, as building activities, as a rule, slow down at this time of year. Most of the larger contracts are nearing completion, only inside work remaining to be done, and it is not expected that much new work will be begun until after the rough weather is over.

Weather conditions have been ideal during the past two months for work in the woods. Under ordinary conditions next year would see a cut well up to the average, but from present indications, lumbering operations will be very much curtailed during the coming winter.

Some of the larger Companies have camps in the woods, but the small operators who get out by far the larger proportion of the year's cut, have done practically nothing. Some of the camps that were in earlier in the season have been withdrawn, and unless conditions show some signs of improvement in the near future, work in the woods, in many parts of the Province, will be at a stand still, and as a result a serious labor situation may develop.

Newsy Jottings from the West

An increase in the assessment to be paid by owners of timber in British Columbia seems inevitable. The present rate is two cents an acre, but an advance to at least three cents will probably be agreed upon shortly and made the basis of new legislation. It is stated by forest officials that the present charge is inadequate to meet the costs of forest protection, for which the timber assessment fund is used. This year $314,000 was available for forest protection, half this amount being made up from timber assessments and the other half contributed by the provincial government on a fifty-fifty basis agreed upon some years ago. The amount actually spent this year for forest protection was approximately $525,000, and half this sum was spent in fighting fires, so it may be seen that the present method of raising funds does not meet requirements. Expansion of population into the forested section of the province naturally results in an increased fire hazard, and provision must be made for meeting this. Definite recommendations on the subject will be decided upon at a meeting of the Forest Protection Committee, representative of operators and government forest officials, which will be held in Victoria, November 17.

Peter Z. Caverhill has been appointed to succeed M. A. Grainger as chief forester of British Columbia. Mr. Grainger, who had been associated with the forestry department since its reorganization in 1911 and who was chief forester for two years, resigned to enter private business and will probably locate in Vancouver. Mr. Caverhill, who has been in the British Columbia forest service for some time and recently as district forester at Vancouver, was formerly chief forester for the province of New Brunswick. He was graduated from the New Brunswick Forestry School and for two years was associated with the Dominion Government forest service, with headquarters in Alberta. He came to British Columbia in 1912 and became a member of the forest service under H. R. MacMillan. Later he returned to New Brunswick to take charge of the department, but in 1917 he came back to British Columbia, where he has remained since.

Some of the workers dining in Camp No. 2 of the Eastern Lands Department Canadian National Railways, near Foleyet, Ont.

Vancouver Island lumber operators have decided to protest again to Ottawa regarding the arbitrary rate charged on lumber shipments from Vancouver Island for transportation on main railroads. All investments in operation as well as in stumpage have been based on a fixed arbitrary or preferential rate of 1½ per hundred pounds for eastern island points, and 3 cents for the west coast. This has meant roughly 95 cents per thousand feet B.M. for lumber, or allowing for overrun scale, about $1.15 per thousand feet of logs. This has now been increased by 33⅓ per cent., or the equivalent to roughly 35 to 40 cents per log thousand in the west coast districts. The arbitrary rate in itself has long been held as a handicap to the lumber industry on Vancouver Island, and the new increase makes it even more a penalty. Clarence Hoard, president of the Bainbridge Lumber Company, is the leader in the agitation to have the Board of Railway Commission revoke the order.

Norwegian interests have purchased large holdings of timber in the Alberni section on the west coast of Vancouver Island. In connection with the deal Messrs. Odd Gjema, Loretz Sathern and H. T. Bull recently visited Victoria. According to Mr. Bull, all Europe is hungry for lumber at present. The Scandinavian supply is either exhausted or held by interests unwilling to sell except at a very high figure. The Russian source of timber is at present out of the question owing to transport difficulties and political conditions.

The payrolls of the forest industries of British Columbia total nearly $30,000,000, according to figures compiled by the Workmen's Compensation Board. The payrolls are as follows: Logging, $12,655,000; sawmills, $9,764,000; shingle mills, $2,522,000; logging railways, $1,722,000; pulp and paper mills, $3,163,000.

No more towering deckloads of lumber will be shipped from the British Columbia seaboard to the United Kingdom, shippers having advices from the British Board of Trade to the effect that all concessions regarding deckloads made during the war and which were extended up to the last winter will be withdrawn and that the strict requirements of Section 10 of the British Merchant Shipping Act, 1906, and other regulations thereunder must be adhered to this winter. Full advantage was taken last winter of the bigger deckloads allowed owing to the scarcity of tonnage and some ships left British Columbia with lumber stacked half way up their masts. There was some private complaint from masters against the deckloads they were forced to carry, but this was countered by the claim of expert stevedors that such loads did not effect the seaworthiness of vessels.

The old saying that "Familiarity breeds contempt" is only partly true; familiarity with the best things breeds appreciation.

Quebec Taking Stock of Rich Timber Assets

Practicability of Aerial Patrol for Forest Survey Work and Fire Protection Being Tried Out—Progress of Experiments Gives Encouragement

The Quebec Provincial Government is at present perfecting an organization, not only for the conservation and protection of its wealth of forests, but organizing a systematic method of survey that in the course of the next few years will place the Government in a position to know with approximate accuracy the latest area of forest reserves of the province, including the vast areas of the Abitibi, the northern regions of the Lake St. John and Lake Misstassini and Ungava regions. The new Prime Minister, Hon. L. A. Taschereau, who is a tireless and conscientious worker, is sparing no time or effort since he assumed office four months ago, to enter into and master every detail of the various departments under hs administration, who are not only presided over by able and conscientious cabinet colleagues but capable deputy ministers and efficient staffs of assistants, but to become personally familiar with the entire system of Government and enable him to better administer the affairs of the province in the interest of the public. A student from his boyhood days and a man with a human side to his charter, who will ever be found to carry on his important duties as premier with impartial justice to all men, is his vision of things as he sees them. It is prognosticated by those who have known him from his youth and followed his career in politics that he will not only make an ideal premier but one of the best the province of Quebec has ever had to preside over its destinies.

Organizing an Aeroplane Service

There are two essential resources of the province that Mr. Taschereau aims to learn all about, foster, protect and develop the forest and mineral wealth of the province. He is now engaged in a thorough study of the Crown Lands and timber limits, and it will not be his fault if even a branch of a tree is wasted. Now the forestry branch of the Lands and Forests Department, in charge of Mr.G. C. Piche, with his assistant, Mr. Bedard, are working on the organization of an aeroplane and hydroplane service for the mapping of the forests in the northern districts of the Lake St. John and the Ungava, that can be mapped from the air. On November 5th, when it became known that the hydroplane and aeroplane station organized by the department, had been established at Roberval in the district of Lake St. John, Mr. G. C. Piche, chief of the Forestry branch, his assistant, Mr. Bedard, with the following-named experts, proceeded there to take observations of operations: Messrs. Henry Kieffer, C. E. Bryan O'Hara, assistant of forest fire protection, Clyde Leavitt, forester in connection with Commission of Conservation, Ottawa, Major Gordon of Air Board, Henri Methot, forester for district of Lake St. John; the manager of Laurentian Forest Fire Protective Association, B. Guerin, Manager of South St. Lawrence Forest Fire Protective Association, and Capt. Keny of Dominion Air Board. On arrival of the party at Roberval and after an inspection of the hydroplane station there, flights were made over the Lake St. John and its neighboring sections, to take observations of the forest districts that could be mapped out from the air, and learn the practicability of an air patrol for fire protection and forest survey work.

Mr. Bedard, assistant chief of the Forest Service, discussing the result of their experience and observations with the correspondent of the "Canada Lumberman," said from the viewpoint of their observations, that they had come to the conclusion that surveying and mapping of forest properties by the aid of the hydroplane would be of great assistance. The weather owing to the lateness of the season when they made their observations from the air, was not as propitious as they would wish, nevertheless they had gleaned sufficient in their short time of experience to understand that the hydroplane and aeroplane would render valuable service in the future. He said the department was in the present only experimenting and could not say at the present time if such a system of protection would be altogether practical from a forest viewpoint.

Carry Out Extensive Survey

"It is contemplated," said Mr. Bedard, "to carry on an extensive survey over the Misstassini lake region as far as the James Bay with the object to obtain a general idea of the forest resources which are lying north of the Lake St. John and the Ungava territory. The explorations made up to the present, have been confined to a few river valleys only of the Ungava, and every effort will be made to discover the possibilities of this territory which is thought to be enormous. During the past summer Capt. Kenny, who is taking a great interest in this work and who is in charge of the hydroplane station at Roberval, and also very much interested in photography from the air, patrolled over the district of the River du Rap and obtained very valuable photographs of that region.

Mr. Bedard, who attended the British Forestry conference in behalf of the Quebec Government, held in London, where he read a paper on forest conditions in the Province of Quebec, which was printed in the report of the proceedings, is a practcal technical expert in forestry and much interested in reforestation as is being accomplished in this province by the Government and as well by private interests. With a view to reaching a state of practical perfection in this regard, the Government is sending to Sweden and France, four students, who recently graduated from the Laval Forestry School, in order that they may gain experience by actual observation in forestry treatment and everything in its connection in these countries, and all that is to be learned silviculture.

Students Studying European Method

These four students, Messrs. V. Bailorge, O. Lussier, A. Landry and E. Guay, will start immediately for their new scene of studies, in fact three of them have already sailed for France, where they will study reforestation and small wood industries in order later to promote such industries in this province.

They will also study other wood properties especially in relation to the manufacture of pulp and paper, while one of the four will study especially forest mapping in relation to aerophotographic mapping under the direction of affairs of the flying army squadron in Belgium and France, as the Quebec Government contemplates the establishment of a school of forest rangers in this province with a view to induce and assure the successful recruiting of an adequate personnel, for the supervision of the forest operation in the province, with practical advanced ideas. One of the four students, while in Europe, will study the organization of such a school, and superintend its establishment on his return from abroad.

Pulp Men Want No Change in Tariff

In a statement submitted by the Canadian Pulp and Paper Association to the Tariff Commission at its recent sitting in Montreal, it was urged that no change be made in the present customs duties. It was also pointed out by the Association that generally speaking, the Canadian pulp and paper industry was in a healthy state, and growing rapidly; that it offered a reasonably attractive field to foreign and domestic capital; provided a means for the favorable utilization of Canada's forest products and waterpowers, as well as of such waste material that would otherwise have little value; gave remunerative employment to a large number of workers; supplied a domestic need at reasonable cost; contributed in no small degree to the Federal and Provincial revenues; performed an important national service in extending Canada's exterior trade, and was paving the way for the scientific conservation and replenishment of the forest wealth.

The industry was one that went out into the wilderness and converted waste places into flourishing industrial communities, leading to the construction of railways for carrying materials and supplies, as well as the establishment of contingent industries.

The United States, to which the most of Canadian pulp exports are sent, admits woodpulp of all descriptions free of duty. Last year Canada exported woodpulp to the total value of $41,383,482, of which $31,316,753 represents pulp exported to the United States, $5,014,400 pulp exported to the United Kingdom, $3,709,986 pulp exported to Japan, and $1,342,361 pulp exported to other countries. These exports were made up as follows.

Sulphate (kraft)	2,518,022	$ 8,327,045
Sulphite, bleached	1,220,764	6,291,452
Sulphite, unbleached	4,863,156	18,381,566
Mechanically ground	6,787,640	8,383,419
Total	15,389,582	$41,383,482

A modern merchant succeeds, not by the old-fashioned method of trying to keep the public in the dark about his particular business, but by the newer and better method of taking the public into his confidence, and turning the searchlight of publicity upon it.

Pulpwood and Its Varied Activities

Will Take Out 150,000 Cords of Pulpwood

The Mattagami Pulp & Paper Co., Limited, Smooth Rock Falls, Ont., of which J. T. Moyihan is general manager and A. Grunwald is mill superintendent, is very busy at the present time and is shipping large quantities of its sulphite fibre to Great Britain and the United States. The present capacity of the plant is 30,000 tons a year, but with additional equipment now completed, it is anticipated that the output for 1921 will be, at least, 45,000 tons. The power development of 10,000 h.p. will be increased by the development of other power sites to provide for contemplated future expansion. Smooth Rock Falls is located on the Government Railway about thirty miles west of Cochrane. The town is owned and developed by the company and has housing accommodations for about seven hundred persons. All modern civic and domestic improvements are in evidence.

The company will take out 150,000 cords of pulpwood this year. The logs are floated to the mill booms at Smooth Rock Falls and there recovered mechanically and delivered to the stock-pile or wood-room as required. P. E. Whalen of Timmins, is woods manager. The timber resources of the company cover extensive lease hold limits, supplemented by 125 square miles of heavily-wooded freehold lands, which are owned outright. The aggregate area of woodlands is 1000 square miles, all easily accessible to water for driving. Duncan Chisholm, of Toronto, is president of the company, and Col. D. M. Robertson is secretary-treasurer.

The company recently completed an operatives' dormitary, dining hall and kitchen buildings at a cost of $200,000. They are of fire-proof construction, steam heated and possess many other important features.

New Depot Opened at Les Escoumains

The recent purchase of timber limits aggregating 404 square miles at Les Escoumains, Saguenay county, Quebec, has been announced by the Laurentide Company. The property has been held and operated by the Saguenay Lumber Company, of Portland, Maine. It is estimated that in the area there are about 1,500,000 available cords of pulpwood, and this winter plans are under way to cut about 10,000 cords.

Les Escoumains is 145 miles below Quebec city on the St. Lawrence River, on the north shore, and is thirty-two miles east of the Saguenay River and the city of Tadousac. It is a town of about one thousand inhabitants, and in taking over the timber limits, the company has also taken over the entire town, which includes a large general store and the post office and telegraph office. The principal occupation of the residents there is working in the bush.

Canada Leads in Pulp Products

Canada's supremacy as the leading producer of pulp and paper products is assured not only for the present, but for many years to come, according to The Financial News of London, which traces the growth of the industry in Canada in comparison with other countries. The available resources of European countries are described as insignificant when compared with those of Canada and the United States. Norway is expected to produce this year 150,000 tons of newspaper; Sweden, 175,000 tons, and Finland, 100,000 tons. Their sum total of 425,000 tons hardly amounts to one-half of the Canadian production. In value it is equally far behind.

The Canadian calculate, it is pointed out, that only two more years will be needed to raise their output of pulp to 1,000,000 tons per annum. In the past six years—1914 to 1920—it has shown an average growth of 70,000 tons a year. Over the whole six years it amounts to 144 per cent. But the rise in value has far outstripped the increase in quantity. The article proceeds as follows:

The only cloud on this brilliant horizon is the comparatively small share which the mother country has in it. From 75 to 80 per cent. of the total output crosses the border into the States. The British market is said to be too distant, and the freights nowadays too expensive for large shipments to cross the Atlantic. The timber limits of Quebec and the Maritime provinces can still reach the British market, but our principal source of supply continues to be the Scandinavian countries.

But the Americans hold a long lead as overseas shippers of paper. In 1919 the five principal exporting countries showed the following totals: United States, about 110,000 tons; Canada, 85,000; Sweden, 75,000; Finland, 38,000; and Norway, 35,000. The American lead was not, however, due entirely to competitive merit. It enjoyed the advantage of favorable exchange. In this respect Canada was the most handicapped of the five competitors, the Canadian dollar being at 10 to 13 per cent. discount in relation to the American dollar.

Mr. Beck to Study Forestry Abroad.

Mr. Beck to Study Forestry Abroad

Edward Beck, Montreal

Mr. Edward Beck, of the Canadian Pulp & Paper Association, will visit Norway, Sweden and Finland, leaving Canada in May next. The object is to study the forestry methods in those countries and to write a series of articles for publication on various subjects connected with the lumber, pulp and paper industries. Mr. Beck's visit will be in response to a number of invitations of representatives of Norwegian and Swedish pulp and paper concerns, who have recently been in Canada to study our conditions. Among the visitors now in Canada are Mr. Hj. Gronvik, managing director of the Paper Mills Union, Helingfors, Finland, and Mr. Graesbeck, also of Finland, who inspected several of the Canadian mills, and have been entertained in Montreal by Mr. G. F. Steele, general manager of the Canadian Export Paper Company. Mr. Helge Grasland, of Stockholm, Sweden, is also in Canada, having been sent by the Stockholm University and Baron Mannerhein to look into the question of the scientific production of pulp and paper here.

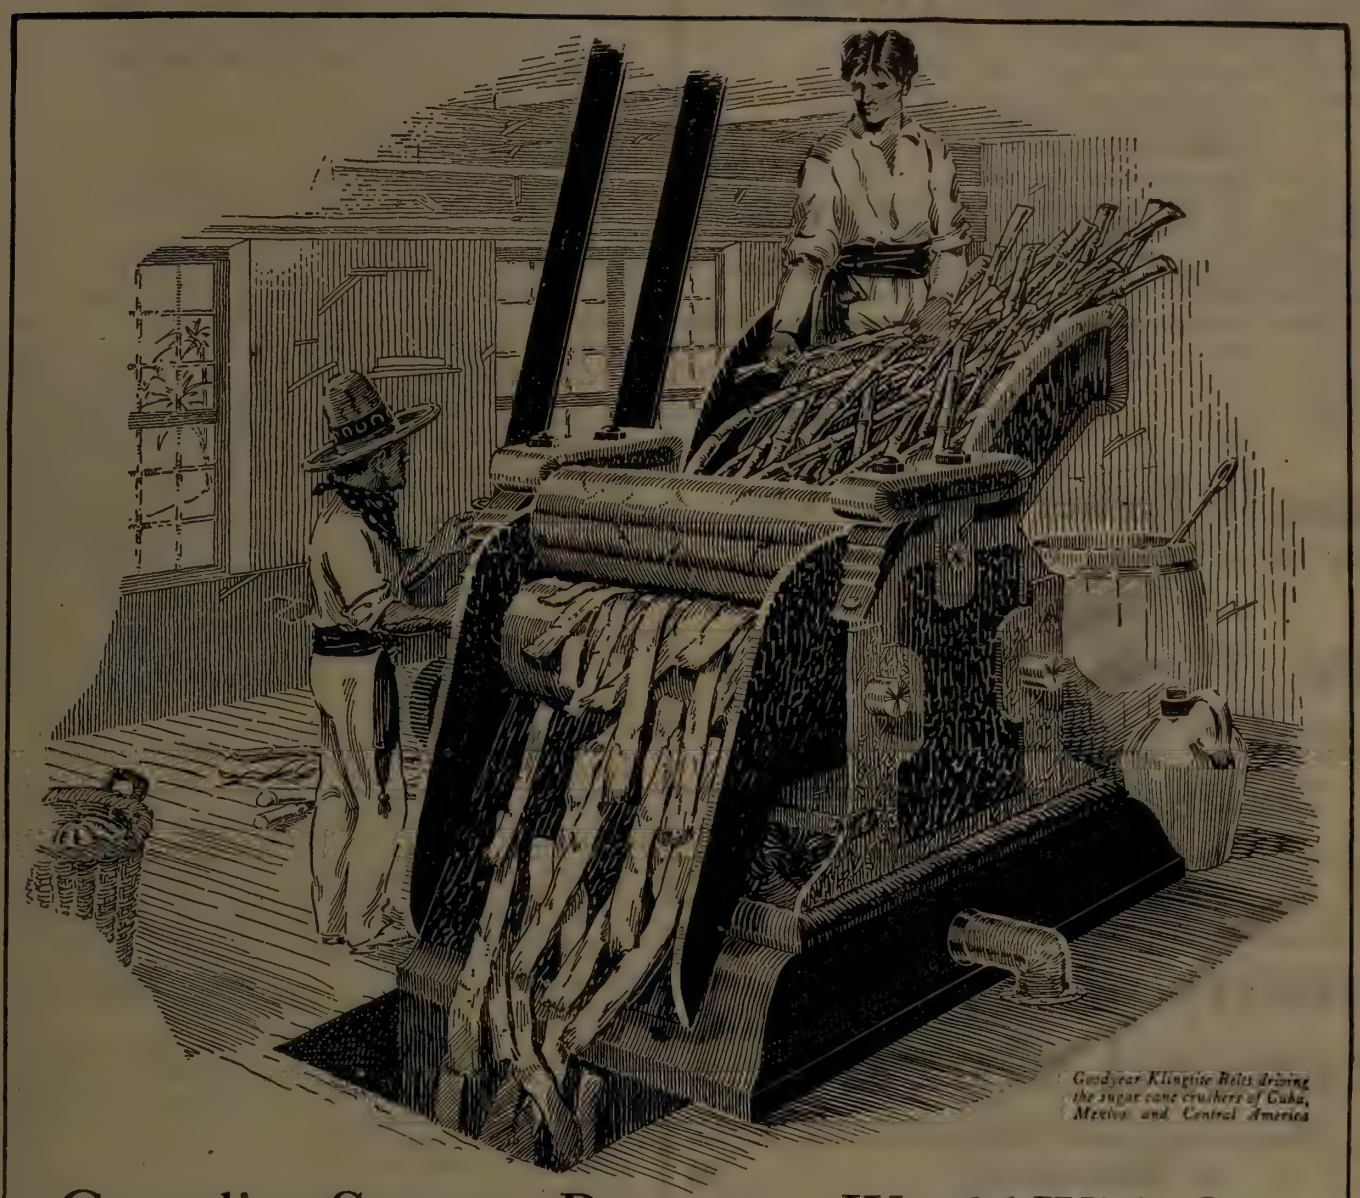
It will be seen that there is growing up an international co-operation which should make for mutual interest.

As to forestry methods, we have on previous occasions printed articles drawing attention to the Scandinavian methods of forestry and of the manufacture of lumber. Scandinavian countries compete with Canada in Great Britain particularly, and it has been often asserted that the manufacture of lumber in Scandinavia compares very favorably with that of Canada, and that the millmen in the former countries pay far greater attention to the needs of the British buyer. Mr. Beck will be able to investigate this at first hand.

The Dollar is Beginning to Buy More

The dollar is beginning to buy more. It now buys quite a lot more at wholesale, and is gradually beginning to buy more at retail. The dollar will buy a pound or two more sugar. It will buy more coffee. It will buy more rice. You now get more for your dollars when you go to buy shoes. You can buy the same dress or the same suit for less money. The merchant gives you more cotton goods for a dollar. A five-dollar-bill buys about twice as much silk as it did a year ago. When a lady goes to buy furs, her purse doesn't have to be quite as bulging as formerly. You still get little for your dollar at most butchers. Bakers, too, are still clinging tenaciously to prices that have a war-time flavor—a coffee ring that used to cost ten cents now costs twenty-five cents in our neighborhood—nothwithstanding that grain prices have declined. Many chemicals have tumbled headlong. Lumber is down from five to thirty-five per cent., depending on the quality. Men's hats for the fall have not been marked at the fancy prices predicted. You can get more than four collars for a dollar. Automobiles are likely to follow Ford's lead. Potatoes are no longer worth their weight in gold. Apples promise to become cheap now that they are so plentiful.

In short, whereas the dollar bill used to buy less than fifty cents' worth, it is already worth more than half a dollar in purchasing power. It should, and doubtless will, recover appreciably more, but not probably a very great deal. The prospects are that there will be declines in those commodities and raw materials and finished products which have thus far resisted the downward trend, but that those things which have already fallen severely will not go considerably lower.—Forbes Magazine.



Goodyear Klingtite Belts driving the sugar cane crushers of Cuba, Mexico and Central America

Canadian Success Promotes World-Wide Sale

As a result of the way Goodyear builds and sells belting and industrial hose in Canada, you will find these Goodyear products saving and serving in over 1,000 of Canada's finest industrial plants and mines.

The analysis of conditions, the scientific specification and application of belts, which Goodyear men make in Canadian plants they are now making all over the world.

To meet the requirements of world-wide trade it has been necessary to make some changes in the names of Goodyear Belts.

For example, Goodyear Extra Power is now Goodyear Klingtite Belt.

But the change is a change in name only.

This world-wide use of Goodyear Belting and Industrial Hose, Canadian-made, will multiply many times the fund of data and experience available to Canadian Goodyear users.

The problems overcome and the lessons learned in the factories of Japan and China, in the mills of India, in the workshops of South America, in the mines of South Africa, by the industries of every country, can now be applied by Goodyear men to Canadian industrials.

When the Goodyear belting man comes to talk to you, this information guides him in advising with you. His help is valuable —and costs you nothing. Phone, wire or write nearest branch.

EDGINGS

Ontario

Greig Morris, Limited, Toronto, have obtained a Provincial charter of incorporation to conduct a general lumber business.

Marshay Lumber Co., Limited, Toronto, have been authorized by supplementary letters patent to increase their capital from $50,000 to the sum of $1,000,000.

Robert Bury & Company (Canada), Limited, Toronto, were recently authorized by supplementary letters patent to increase their capital from $40,000 to the sum of $100,000.

The Cornwall Pulp & Paper Co., Limited, Toronto, was recently granted a Provincial charter of incorporation to manufacture and deal in pulp and paper products and by products. Capital $200,000.

The Hintonburg Planing Mill on Armstrong St., Ottawa, was recently destroyed by fire. The loss is $2,000. and the owner of the mill is Mr. Foster, who is considering the advisability of rebuilding.

Messrs. Maguire, Patterson and Palmer, have started the erection of a new splint factory in Pembroke on the property recently acquired from the Iron Works Company, and the Pembroke Lumber Company.

The Hamilton city council had 700 cords of fuel wood cut in Algonquin Park cut last season, and the wood will be brought to Hamilton as soon as possible. It is expected that it will be retailed at $16.00 a cord.

The new sawmill which Austin & Nicholson, of Chapleau, are erecting at Dalton Mills, Ont., will not be completed until next spring. A. J. Wallace, late of Barrie, Ont., has been appointed superintendent of the plant.

The G. Walter Green Company, Limited, Peterboro, was recently granted a federal charter of incorporation to acquire the business known as The G. Walter Green Company, Limited, and to manufacture and deal in all kinds of woodworking and saw mill machinery; capital $200,000.

Many lumberjacks are required in the lumber camps of Ontario and Quebec. Wages as high as $80 per month with board are offered by the companies that propose to operate on a large scale in the northern woods. The lumber and mining industries are two phases of activity where most surplus labor can be absorbed during the winter months.

At the Knights of Columbus weekly luncheon in Toronto recently Mr. William Petley gave a short talk on Canada's Far North. The speaker gave particular attention to the Great Slave Lakes district and the Mackenzie River. He spoke of the wonderful resources of the North country in timber, oil, asphalt, fish, etc., awaiting only means of transportation.

Fire broke out recently in the lumber yard of A. Pedwell, of Fairbank, a suburb of Toronto, and resulted in the loss of a million and a half feet of lumber, which was piled on the premises. The loss is about $50,000, covered by insurance to the extent of $30,000. Mr. Pedwell's home was also wiped out by the flames, the loss being $3,500, and covered by insurance. W. J. Bennett, who has a lumber yard next to Mr. Pedwell's, suffered several hundred dollars damage. The fire was one of the most spectacular that has occurred near Toronto in a long while.

A county municipal forest covering 800 acres and within easy access by rail and motor. That is what the County Council of Simcoe has provided for by the purchase of a block of waste land in the township of Vespra. The location is between Midhurst and Anten Mills, within a mile of Hendrie station on the Penetang line of the old Grand Trunk. The land wholly useless for ordinary agricultural purposes, was secured at a cost of $5.74 per acre. There is some second growth pine, white birch, red oak and a little hardwood on the property. The whole block was once covered mainly with pine and since this was removed the land has remained practically idle. The expectation is that Ontario will provide seedings and undertake the work of planting. The question of care after planting is stil to be settled, but in view of the public spirit shown by the county in purchasing the property the Province would be fully justified in building a home and providing a caretaker for the protection of the trees during at least the early stages of growth.

Thirty representative business men from Chicago recently paid a visit to Thorold in order to gain an insight into Canadian pulp and paper industry. They were shown through all the departments of the big plant of the Ontario Paper Company and were much interested in watching each detail of the operation of turning spruce pulpwood into newsprint. The company is adding a fifth paper machine which will increase the output to three hundred tons daily.

A federal charter has been granted the National Fibre Products, Limited, with headquarters in Ottawa. The company has very wide powers and among them is that of carrying on any other business, manufacturing or otherwise, which may seem to the company capable of being conveniently conducted in connection with this business, or calculated directly or indirectly to enhance the value of or render profitable any of the company's property or rights. Among the incorporators are Harvey Fitzsimmons and Byron Moses of Ottawa.

General Canadian News

Gordon Maughan, of Bridgewater, N. S., intends erecting a lathe and rotary mill at Bridgewater.

Millichamp & Brown, lumber dealers, Sperling, Man., have dissolved partnership, A. K. Brown continuing.

The contract for the construction of the plant of the Three Rivers Pulp & Paper Company, Limited, has been let to W. I. Bishop, Limited, Montreal.

St. Regis Paper Company of Canada, Limited, Montreal, Que., have been incorporated to manufacture and deal in lumber and pulp products; capital $1,600,000.

The Asphalt Roofing Company, Vancouver, is shortly to build an addition to its plant. The new plant is for the purpose of making wall board from sawdust and magnecite.

The River Ouelle Pulp & Lumber Co. of St. Pacome, Que., say that the cut at all their mills during the coming season will be materially reduced owing

to the fact that their robbers are holding off and demanding more money than the company feels disposed to pay at the present time.

Landry Pulpwood Company, Limited, Quebec, Que., has been incorporated to conduct a wholesale and retail business, dealing in lumber and all kinds of pulp products; capital $100,000.

The Hillcrest Lumber Company, in the Canadian Valley, B. C., is remodelling its plant. The horsepower will be doubled and larger machinery will be installed throughout the mill.

The work at the Restigouche (N. B.) booms was stopped recently for the year. A large amount of lumber has been held over until next season, estimated at 15,000,000 is South Boom and over 20,000,000 in the North Boom.

Fire lately destroyed a sawmill owned by P. F. Mathieu, at St. Gregoire, Montmorency Falls, about seven miles from Quebec. A quantity of lumber was also destroyed. The loss is estimated at $10,000, and there was no insurance.

The International Timber Company is reported to have secured a portion of the timber limits located on the Indian reservations near Campbell River, north Vancouver Island. It is said to be the company's intention to erect a mill and wharf on the property and to generate power from nearby waterfalls.

Currie Manufacturing & Lumber Co., Limited, Brandon, Man., have been granted a Provincial charter of incorporation to conduct a general lumber business, manufacturing and dealing in forest products; capital $100,000. W. J. Currie and H. V. Currie, manufacturers, of Brandon, are two of the incorporators.

Alliance Lumber Co., Verdun, Que., were recently granted a provincial charter to acquire the business known as "Scierie Filteau & Daigle, Enreg." and to manufacture and deal in lumber, pulpwood and other forest products; capital $199,000. J. P. Dupuis, and L. A. Daigle, lumber merchants, of Verdun, Que., are two of the incorporators.

What is believed to be a lumber loading record was accomplished by three crews of the Genoa Bay Lumber Company, Genoa Bay, B. C., when 600,000 feet of lumber were stowed away in the hold of the steel steamship Margaret Coughlan in a twelve-hour working day. Most of the men in the crews are Indians who have been loading lumber since boyhood.

It is said that the Nashwaak Pulp & Paper Co. of St. John, N. B., are paying as high as $90.00 and $95.00 for men to work on their operations this season, and these figures have secured all the labor they require for their pulpwood operations. Lumber companies are paying from $70.00 to $75.00, and in view of the outlook and with a curtailed cut, declare they will not be justified in paying any more.

A federal charter has been granted the Canusa Export Co., Limited, with headquarters at Montreal and a capital stock of $200,000. The company is empowered to purchase, lease, etc., timber licenses and limits, and to construct or otherwise acquire, operate, control, manage and deal in mills of various descriptions, including those for the manufacturing and finishing of logs and lumber, and all products or by-products of wood.

Whalen Pulp & Paper Mills, Swanson Bay, exceeded during the month of October the production of any similar month, turning out 1,203 tons of high-grade pulp. The lumber and shingle mills of the company have also been quite active considering the quiet state of the market. The leading officers of the Whalen Pulp & Paper Mills recently made a tour of the company's plants. Hon. T. W. McGarry of Toronto, president of the company, headed the party.

While running with the wind and sea, bound from Parrsboro to St. John, with a cargo of lumber, the schooner Mildred K. ran on a sand bar off Martin Head, eighteen miles northeast of St. Martins, starting the rudder post, straining the vessel somewhat and throwing overboard some of the deck load of lumber. The vessel has been towed inside the breakwater at St. Martins Head and was safe there. The lumber lost in the accident has been salvaged and is on the docks.

A recent despatch from Fredericton, N. B., says that an immense transaction involving the purchase of the New Brunswick Railway Company's timber lands at approximately $11,000,000, which was to have been completed by the Fraser Companies, Limited, recently, has not yet been closed. Archibald Fraser said that the consumption of the deal had been "postponed," and added that "no big deals are being put through just now." For continuing the option which they have on the New Brunswick Railway Company's lands the Fraser interests have been paying $25,000 a month for some time now.

Henry King, of St. John, N. B., has recently put a large crew of men at work at Mispec, N. B., cutting pulp wood. Considerable small timber has already been cut down and yarded, and machinery is being set up to bark the wood on the ground. It is expected that by next spring there will be at least 5,000 cords of pulp wood ready for shipment. The export of native wood to be used in the pulp and paper industry has been on the increase within the past year, especially along the Valley Railway route. C. G. M. M. steamers have taken several cargoes of native timber cut in short lengths and barked to Maine.

Dr. Y. W. Swain, of the Forest Insects section of the entomological branch of the Dominion Department of Agriculture, was in Vancouver lately on his annual tour and at the request of the Park Board gave a talk to the members on the best methods of conversing the trees in Stanley Park. Dr. Swain stated that it was too late to save any of the spruce, but that some of the hemlock might yet be saved. It was of the greatest importance to cut out all the dead standing timber and let in light and air. Such timber was an eye sore and a danger. The Douglas fir and cedar were in good condition and Dr. Swain advised that reproduction be confined to these species.

Orientals employed in many of the lumber mills of British Columbia are being discharged and only white help retained, according to statements by men closely in touch with conditions in the industry here. This decision, it is stated, was arrived at recently by a large number of the mills, and announcement that one mill has dispensed with all its Oriental help is said to be but part of the general move along that line. While some of the lumbermen point out that the discharging of Orientals by some of the mills is simply a move to reduce their staffs, owing to existing conditions in the lumber market, the fact is not denied that one or two of the mills have replaced Oriental help with additional white help. On the other hand, it is stated, with the return of increased demands upon the trade, if white help is not available it is probable that Oriental help will again be added to the mill crews.

STUDY AT HOME
and Make More Money

What Is Your Job?

Are you the man who is bossed—are you doing the hard work while some other man gets the high pay for telling you what to do? Why not be the boss yourself? The only difference between you and the men higher up is in what they know what you don't know. They get their big pay and have the easy work because they know how to direct you and other workmen. If you could read blue prints, estimate on work, know how to direct construction, you too would be in the big pay class. Read below how you can get this knowledge and be a bigger man in your line.

Learn in Your Spare Time

At home—in your spare time—you can get instruction by mail from the experts of Chicago Technical College. You can learn all the higher branches of your trade and soon know as much or even a good deal more than the man who is bossing you now. If you are a workman, you can train for a foreman's or superintendent's job or you can look ahead to being a contractor in business for yourself. This training doesn't cost much and you can pay on easy terms. Look into this now. Just send the coupon below and get catalogs and full information.

FREE

Send the Coupon.

Lesson in Plan Reading

Get this free lesson. See from it how plain every point is made and how easily you can grasp it. Not a cent to pay. This lesson is free—sent to show you how quickly you can advance by taking a Chicago "Tech" home study course in Building. All you need do to get it is to send the coupon.

Complete Builders' COURSE

Prepared and taught by experts. No useless theories. Just the practical things you want to know—told in simple, practical language Easy to understand—and you have the personal direction of the Chicago "Tech" experts who explain everything—make every lesson clear to you.

What We Teach

Plan Reading. How to read a building plan. How to read dimensions. Detail drawing. How to lay out work from plans. Tracings and blue prints—how they are made. Practice in reading complete plans from basement to roof, etc., etc.

Construction Brick Work. Footings and foundation walls of brick, concrete and stone. Brick laying complete. Brick and stone arches. Use of different kinds of stone. **Carpentry.** Kinds and uses of wood, cornices, interior details, etc., etc. Plans and specifications for all kinds of buildings.

Estimating. Practical rules. Problems worked out from the plans. Brickwork and carpentry. Re-inforced concrete. Estimates of labor and material for all classes of construction. Fire proofing, tile flooring, arches, partitions, furring, terra cotta, etc. Lumber and timber; figuring board feet. Estimating mill work. Lathing and plastering, sheet metal work, marble jointing and decorating, glazing, plumbing, heating, wiring, etc.

Arithmetic. Architectural Drafting, Plumbing, Heating and Ventilating all taught by practical men.

Get This Training By Mail

You get all this training by mail and you study in spare time. Not an hour taken from your work. Keep on earning while you are learning—then step into bigger pay as a building expert—get paid for what you know—not for what you do. You be the one to know the "hows" and "whys"—to tell others just what to do.

Send Coupon Now

This brings catalogs and complete information about the course which interests you. See how others have profited merely by study in their spare time—by preparing for the big jobs above them.

Mark X in coupon to show which course interests you.

Curing a Mean Drive

Practically every factory of any size has one or more mean drives which seem to defy all attempts to correct them.

Our transmission experts take more real satisfaction in solving mean drives than in selling belts.

Dominion Friction Surface Belting

has helped to solve many transmission problems, and we have yet to find a drive where it will not provide efficient, satisfactory service.

It will cost you nothing to have one of our belting experts study your problem.

The first step to that satisfactory service is to 'phone or wire to our nearest service branch.

"Open Kettle" Registered

Extra Fancy Molasses

We know you serve Molasses to your Lumberjacks. Have you ever tried our "OPEN-KETTLE" blend? We have a way of blending several kind of syrups and molasses into one, giving the right taste.

You probably know that Blended Tea has a better flavor than unblended. You will find that same applies to MOLASSES. Of course not all Blended Tea tastes alike and not all Blended Molasses would appeal to you.

Read what Dr. Milton Hersey (Industrial Chemist) has to say:

"We have tested and analyzed a sample of your "Open-Kettle blend fancy Molasses" and find it made of a good quality of syrups and molasses, free from any impurities. It has a high food value. Our tests indicate it is well adapted for eating and table purposes."

We suggest that you give us a trial order for a carload of our "OPEN-KETTLE" Blend at $1.00 per Im. Gal. x F.O.B. Cars Montreal.

Samples will be mailed on request.

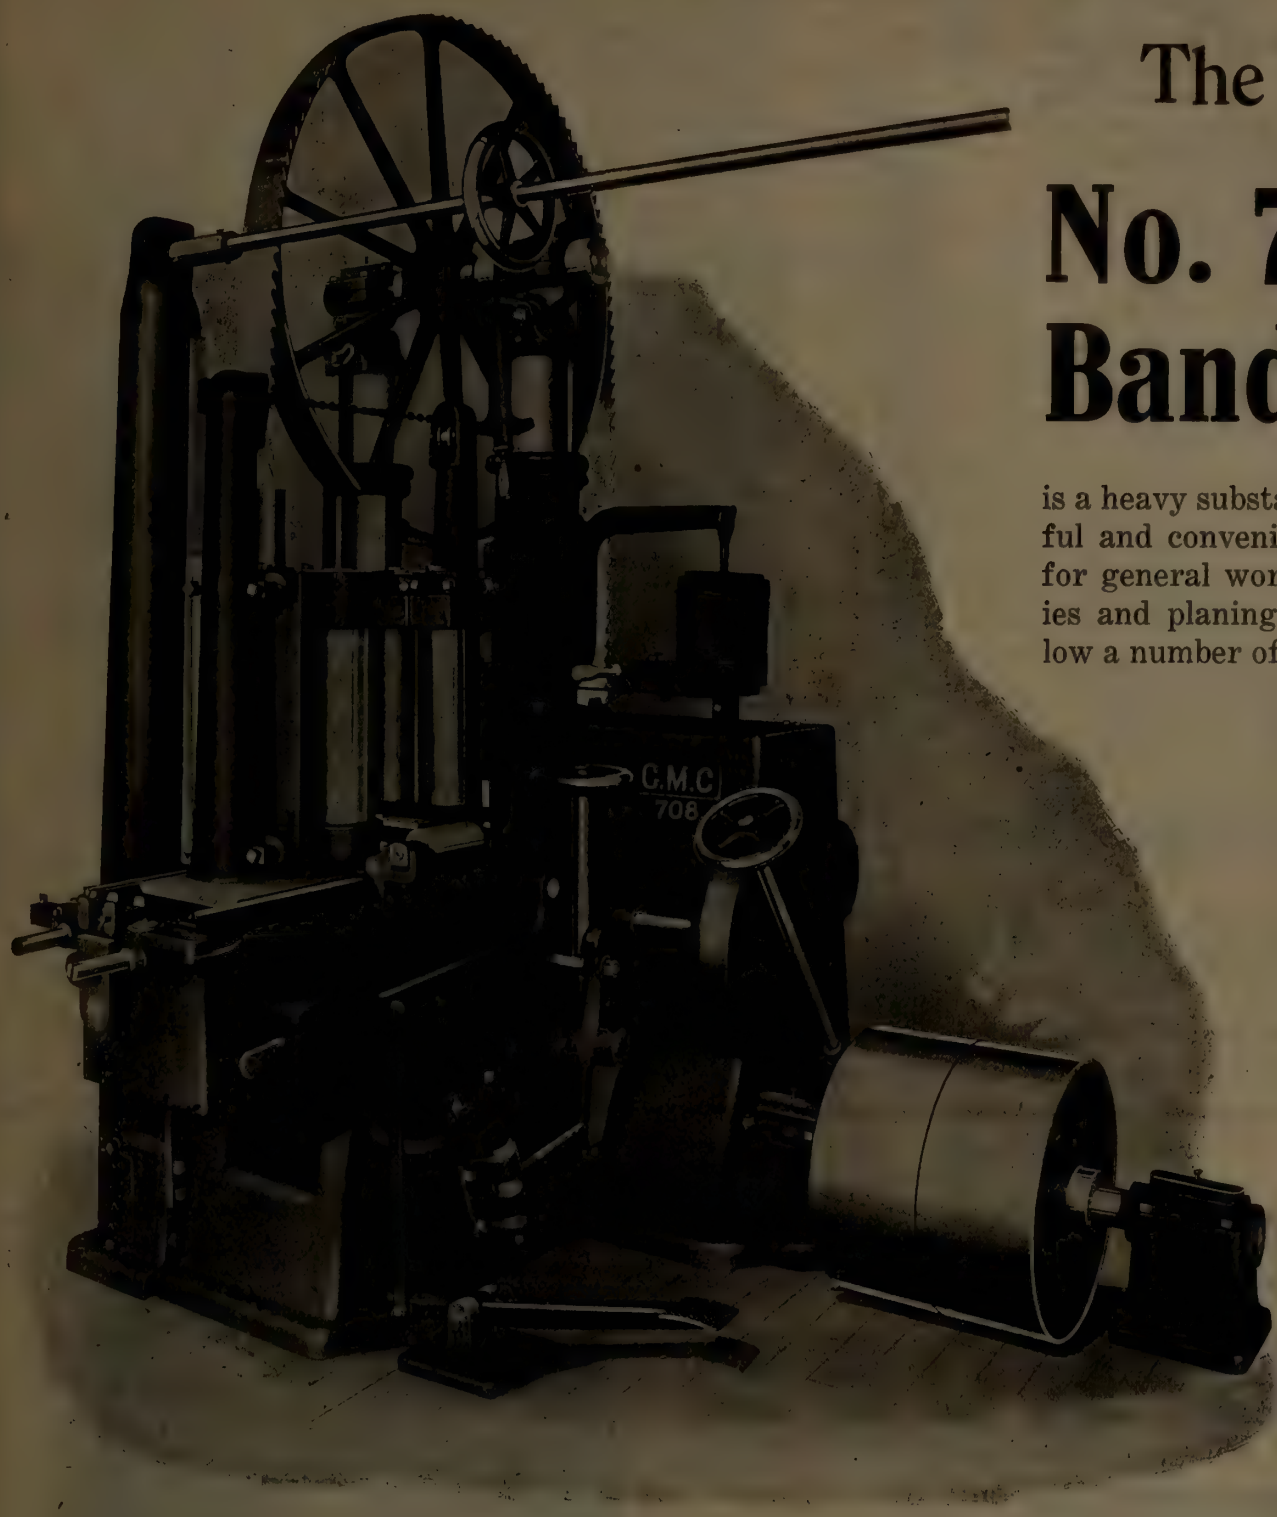
(Continued on page 82)



The C.M.C. No. 708, 48" Band Resaw

is a heavy substantial machine, very powerful and convenient to operate. It is built for general work in furniture, box factories and planing mills. We enumerate below a number of features in which it excels.

Upper wheel is supported by two posts on either side and is not overhung, insuring alignment and freedom from vibration at all times.

Feed is positive, consisting of six 4″ rolls powerfully driven by spur and bevel gears machine cut from the solid. Six changes of feed are obtainable.

Machine regularly equipped with 5″ blade.

Powerful drive is insured by wide driving pulleys.

This Band Resaw is built with the same care and attention to detail which characterizes all C. M. C. machines. It is a "quality machine for quantity production" as evidenced by the driving power and convenience of operation embodied in same.

Complete details and prices on request.

STEEL WIRE ROPE

In the logging country it is only the strongest wire rope that appeals to the lumberman. He does not care to risk life and property to inferior grades of steel wire rope, so you will invariably find Canada stamped on the drum.

We ship immediately upon receipt of order.

FIRE BRICK

AND CLAY

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel," "St. Marys," "Keystone" and "M.D. Elk"

GASOLINE HOISTS
for Loading and Skidding Logs

These machines have been thoroughly tested for several seasons in the size of timber current in Ontario and East, and have not only stood the test well, but have won the hearty and unqualified approval of their users.

They are light in weight, but powerful in action.

They can be moved around easily on the job.

They do the work of several men, thus solving to some extent the vexatious labor problem.

They cost little, are economical in operation, not liable to get out of order, and soon earn a good dividend for the owner.

Marsh Engineering Works, Limited

Established 1846

Belleville, Ontario

Sales Agents: Mussens Limited, Montreal, Toronto, Winnipeg, and Vancouver.

THE MODERN LABOR-SAVING LOGGING MACHINE

Single Drum Hoist

Double Drum Hoist

Either of the above machines is made in 2 sizes—6 horsepower and 10 horsepower and supplied either as shown, with motor rigidly mounted on same bed as hoist, and direct connected thereto or with motor separately mounted, and arranged for Belt Drive.

GOODHUE BELTING For Saw and Planing Mills

In a Goodhue Belt you get only the best leather with the stretch taken out of it. A Goodhue Belt will always run evenly and "clings" to the pulley transmitting 100% of your power

For the wet places in the mill we have a special waterproof leather belt—"Acme." Other Goodhue Belts are "Extra" and "Standard" recommended according to the conditions under which the belt has to run.

Goodhue Belts stretch less than any other belt by 15 to 25 per cent.

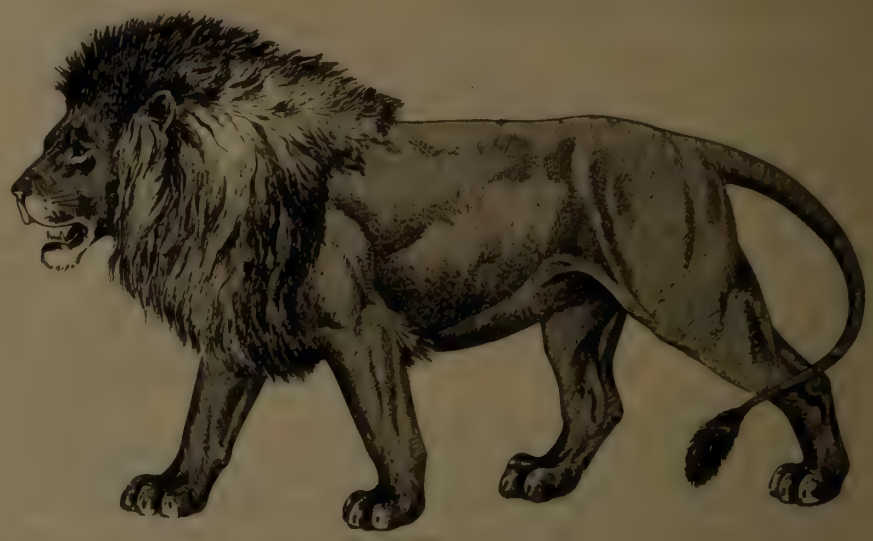
It's better to be safe than sorry---and cheaper too!

The sudden breaking of a poorly constructed rope may not only mean untold suffering, but a real dollars and cents loss. You cannot afford to expose your men and horses to the dangers of inefficient rope and you cannot afford the delays caused by them. Considered from every angle it pays to buy dependability and that's what you get in "Lion Brand."



Write us telling your requirements and we will immediately send full particulars of any of our products—Cordage, Transmission Rope or Lathyarn.

"HAMILTON" LOG CARRIAGES

Above cut shows one of our **No. 2 HEAD BLOCK CARRIAGES** with knee opening 40″ from saw line. Note the sturdy compact lines of this carriage, built for heavy but accurate service with weight properly distributed, and the dogs set low on the knees to insure gripping of the smallest logs.

We make these Carriages with pine or oak frames any length—having cast iron, or steel cast head blocks—with knee opening of 33″, 40″, and 54″, and equipped with any number of head blocks of any spacing required. Hand or Steam Set may be used, and carriages are designed for either steam or rope feed. They are built of the best materials obtainable for fast and accurate cutting, are equipped with **NEW DESIGN AXLE RECEDING WORKS** and have carriage wheels 14″, 16″ or 18″ diameter. We have installed hundreds of these carriages in Mills from Coast to Coast, and we guarantee them in material, workmanship, and design to equal any on the market to-day, and to give thorough satisfaction wherever used.

OUR CARRIAGE CATALOGUE IS YOURS UPON REQUEST

Consult us for any of your saw mill needs, and you will have a Plant looking after your interests **that has been in the Sawmill Machinery game for over sixty-five years.**

Atkins Sterling Quality Saws

Grinding Circular Saws

Saw grinding has a very important bearing on lumber production. If a saw is not ground properly production is interfered with. E. C. Atkins, the founder of this business realized this in the late fifties when he invented and developed exclusive saw grinding machines. Many improvements have been made with the result that *Atkins Sterling Quality Saws* are known for their excellent work in the leading saw mills.

Ask for latest catalog.

A few facts about the Moreau Barker

This machine is shipped with the knives set on the cylinders and a gauge for that setting.

The cylinders are two in number on one machine and each has three knives.

They work under metal cover to prevent all accidents to set the knives, making them very strong, and insuring almost, absolute immunity from breakage.

They work under metal cover to prevent all accidents to the machines or to the men working with it.

The cylinder should run 1,000 to 1,200 revolutions per minute.

The feeding system is entirely a new one; the wood is placed at the end opposite to the levers on a set of cog wheels on one side, and a set of gears on the other side, but not farther than the second gear. The gears run very much slower in the opposite way of the cylinders making the logs turn on itself, thus taking the bark all around. The cog-wheels being placed in a bevel shape, in their revolutions, carry the wood over the first cylinder, which cuts the knots and lumps, takes the most part of the bark, leaving only the spots or a small cut for the second cylinder.

The gear before the second cylinder is adjustable and controls the thickness of the second cut by means of one of the levers at the hand of the operator, who can give the cut, only when the spots are over that cylinder and take it off just after to save the waste.

ALLIGATOR BRAND HARNESS

No one realizes more fully the necessity for thoroughly dependable harness than the lumberman. It is here perhaps that harness is put to the most rigid tests, where only the strongest will stand the wear and strain of heavy haulage over unbroken ground. It is here, too, that faulty workmanship or poor material may spell disaster for horses and driver.

Let your selection then be a wise one Choose a product that has made good in this particular work.

Oldest and Best

HOE

Chisel Tooth Saws
Choice of Lumbermen Everywhere

The even temper of these saws and the fine quality of steel from which they are made have proved Hoe saws reliable for nearly one hundred years.

More than one hundred thousand "Hoes" are to-day successfully sawing lumber in all parts of the globe. The Hoe Chisel Tooth Saw, invented 40 years ago, is still the best for cutting hardwood.

Special Flanged Shanks and Superior Bits Supplied

Interior of a Canadian Planing Mill

A Cheap and Effective Form of Insurance

B.F. STURTEVANT CO. BOSTON, U.S.A.
REG. U.S. PAT. OFF.
Sturtevant
PUTS AIR TO WORK

As Clean as a Whistle

NO coughing, choking—or "cussing" is heard in the modern planing mill.

Gone are the fearful clouds of dust—no sawdust or shavings litter the floor, or clog the machines.

What is the solution of this remarkable change?

The answer is:—

Sturtevant
(TRADE MARK)

Planing Mill Exhausters

A wonderful system that snatches the sawdust and shavings right from the cutting tool, and bears them away in a twinkling. It is the powerful blast of air in the Sturevant Exhausters that keeps the plant as clean as a whistle, and preserves the health of the workers.

A Sturtevant Planing Mill System

—Prevents fire, because it allows no refuse to gather to form a fire risk.

—Keeps the atmosphere free of dust, thereby preventing throat and lung diseases among those who work in the plant.

—Allows no refuse or litter to clog the machines and hold up production.

Write for Special Bulletin No. 261-C.

THIS TRADE MARK IS YOUR BEST BELT GUARANTEE

Is it On Your Drives?

So much depends upon your transmission service that you cannot afford to trust your machinery and output to anything less than an absolutely reliable belting.

With D. K. McLaren's Genuine British Oak-Tanned Leather Belting on your pulleys you are secured against costly breakdowns, delays, and leakage of power.

Carefully selected hides and our exclusive Oak Tanning process impart to D. K. McLaren Belting the greatest possible resistance to all agencies that are destructive of inferior beltings. That is why the Oak Leaf trade mark should be on all your drives.

OTTAWA MONTREAL TORONTO WINNIPEG VANCOUVER

Large stocks available for immediate shipment

Rubber Goods FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P.M.S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

LUMBERMEN'S EQUIPMENT

THE E. LONG MANUFACTURING CO. SAW MILL MACHINERY ORILLIA CANADA

A BIG PRODUCER

THIS STANDARD EDGER

is very strongly built. It is mounted on one solid base, and is constructed throughout to stand up under the heaviest work.

The arbor is made of the best machine steel, and runs in three bearings, 7 inches long.

There is one solid, fluted feed roll, 5 inches in diameter, on either side of saws. These are power driven by means of belts and gears. The front press rolls are of an open pattern, to allow operator to view saws.

The saws are 18 inches in diameter, and will cut stock 5½ inches thick. Height from floor to top of rolls is 31 inches. Shipping weight complete 2,200 lbs.

Waterous "Trouble-Proof" Haulup Chains

The efficiency of your haulup depends directly on the strength and the wearing qualities of your log chain. Waterous Chains have more than their share of both. They are built of selected materials. The shop work on them is of the very best. They are tested and inspected before shipment.

Next time you order—think of "Trouble Proof"—and specify "Waterous."

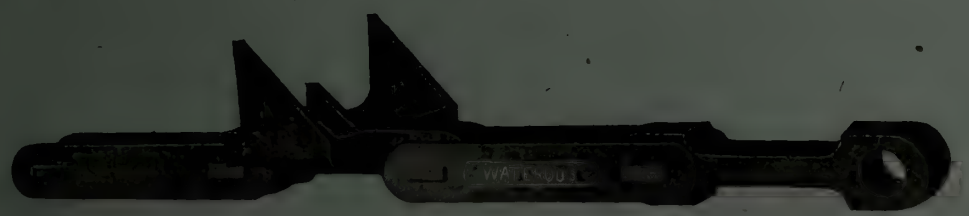
Waterous Forged Bull Chain

This chain is forged from the best refined wrought iron. It is 6 inch pitch and is built in seven sizes, ranging in weight from 2½ lbs. to 15 lbs. per foot. Iron, steel and wood specials of various forms are supplied with this chain. It can be used on all size Bull Wheels and is also adapted for Rough Wood and Refuse Conveyors.

Short Link and Long Link Coil Chain

For strength and general usefulness this chain is hard to beat. Fifteen sizes are built ranging in weight from 150 lbs. to 2,335 lbs. per 100 feet. Only the best chain iron is used in its manufacture, welds are exceptionally long and carefully made, and all links are tested for size and uniformity before leaving the shops.

Waterous All Steel Haulup Chain



The heaviest, largest logs can be handled on this chain. It is the longest lived and cleanest chain we build. It is 8 inch pitch throughout and carries a heavy cast steel special spaced every 6 feet. Side bars, centre links and connecting pins are all of steel, the links and bars being drilled for the reception of the pins.

We also build Malleable Log Chain, Roller Haulup Chain, Chain for Pulpwood and for Saw Dust Conveyors.

Any length can be supplied.

Our list of Specials, Sprockets, Idlers and Spools is exceptionally complete. These are are illustrated and described in our Chain Catalogue No. 108, which we will be glad to supply on request.

PEMBROKE - - - - - ONTARIO

Not altogether what we say, but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

West & Peachey - Simcoe, Ont.

Machines that actually record every minute worked—every minute wasted

International Card Recorders furnish a simple, accurate, printed, indisputable means of recording the arrival and departure of employees. They are just as profitable to the employer of ten or fifteen men as they are to the employer of ten or fifteen hundred. All serve the same purpose—to make every working minute of every working day productive.

Let us send you full information of the model best suited to your requirements. No obligation whatever.

INTERNATIONAL BUSINESS MACHINES COMPANY, LIMITED

Also makers of Dayton Computing Scales and Hollerith Electric Tabulators.

A Harness That Will Stand the Grind

A harness that will stand the strenuous grind of the bush and lumber camps must be of the most sturdy nature. For such work there is no harness made that excels the famous "Carson Quality" Michigan Lumber and Skidding Harness.

It is made of the best quality oak tanned leather—by the best Canadian workmen.

You will make no mistake in equipping your outfit with "Carson Quality" harness and horse equipment. Let us send you full particulars.

A Completely Automatic International Card Recorder

This model shows the greatest development of all the Card Time Recorders. Its records cannot be disputed. Such a machine promotes mutual confidence between the employer and employed, besides simplifying the auditing of the pay roll by 80 per cent.

All you have to do is wind it once a week, the three automatic features do the rest.

1st. Automatic shift from "morning in" to "noon out" to "noon in," to "evening out" to "night in" and "night out."
2nd Automatically changes from one column to the next.
3rd Automatically printing all "late comers" or "early leavers" or overtime in Red
All you have to check are the red figures, the regular time is printed in green.

Ask our nearest office for further information.

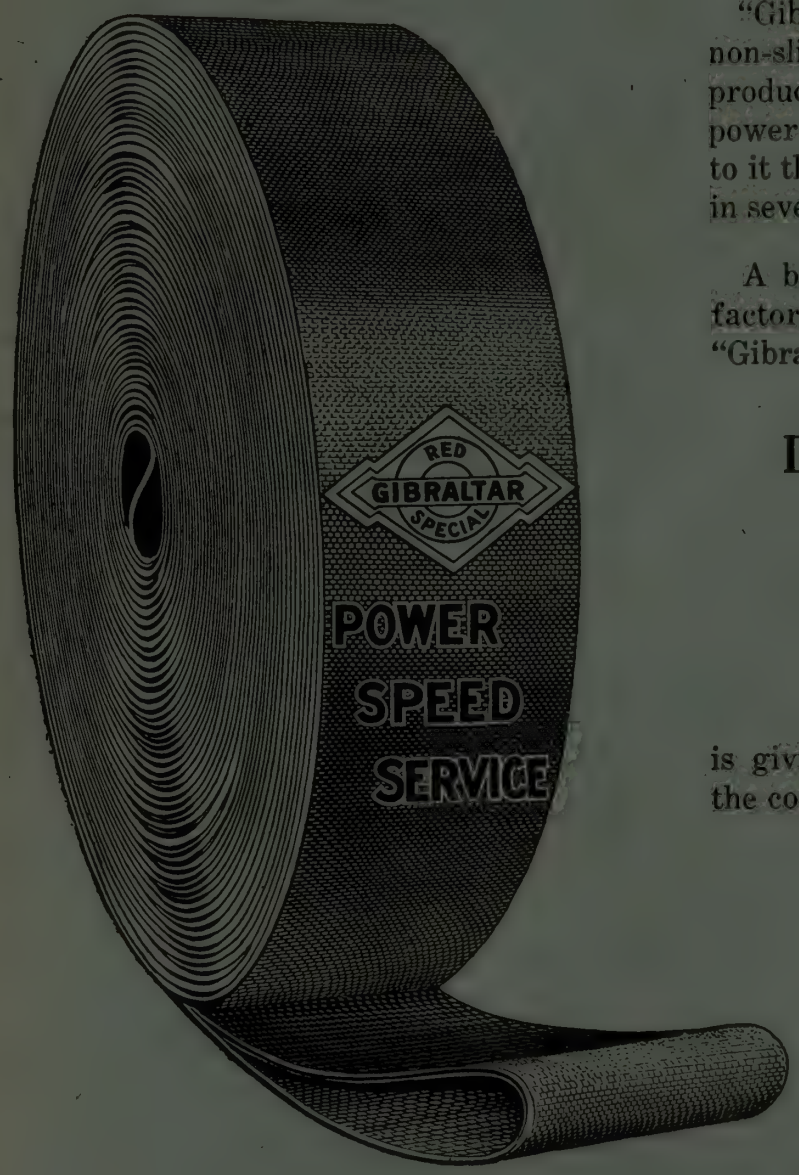
"Gibraltar RedSpecial" Belting

Cuts Down Producing Costs



"Gibraltar RedSpecial" Belting is pulley-gripping, non-slipping, pliable, strong. It cuts down the cost of production by faithfully transmitting every vestige of power and keeping on the job. There is so little stretch to it that users tell us they haven't had to "take it up" in several years of onerous service.

A big percentage of the orders going through our factory are repeats from industries which have used "Gibraltar RedSpecial" Belting.

Dunlop "Gibraltar RedSpecial"

Water Hose,
Air Drill Hose,
Steam Hose,

is giving highest satisfaction in hundreds of plants the country over.

Dunlop Packing

For All Purposes and Every Condition of Service

New Business

is the life of trade, but there is so much competition now-a-days that it is harder than ever to get the new business. Live, reliable, advance information regarding

Building and Engineering

contracts enables you to make a well-directed efficient effort for more sales. Such information you get through the use of MacLean Daily Reports. You can have on your desk every morning a batch of reliable, timely reports of contracts that will result in a keener sales force, more orders, and in cutting down selling costs for you. Hundreds of well-known firms are profiting by their use. Why not you, too?

Write for full information.

LEADERSHIP

There's always a leader. In every business, in every district you'll find them—the leading grocer—the leading druggist—the place where you can get the best there is.

People get to know those places and patronize them. The leading store then, invariably is the busy store.

It's the same in the lumbering field. There's always a leading lumber merchant in every district. And the leadership is attained in much the same way—selling good goods to-day, to-morrow, and every day.

But you have to buy the right goods before you can sell them. That's where the need of the wholesaler is found and that's where we believe we can interest you.

Yuletide Greetings

WE wish you all a hale, hearty Christmas. May it be replete with good cheer, the best of fellowship, and a generous share of the many good things that go to make Christmas a happy ending to an old year.

For the New Year may all your endeavours be rewarded with success, and so make for you another rung in the ladder of wealth and prosperity, with the best of health to enjoy it.

How to Reduce Costs of Building

Buy our "Utility" grades of Siding (made in Sitka Pine or Fir), and Flooring (Fir only). They effect a 20% saving. They satisfy the contractor because no extra labor cost is necessary and consumers appreciate the receipt of **maximum value for their dollar.** If you have not used "Utility" grades, write us —no others produce them.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year, in advance; other foreign countries embraced in the General Postal Union, $3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Vol. 40 Toronto, December 15th, 1920 No. 24

We See No Hides On the Fence

The Commission to investigate the administration of affairs in the Crown Lands Department of Ontario was appointed on March 9th, 1920, by the Provincial Legislature. The next session of the Legislature has been called to meet on January 25th, nearly a year after the the Timber Commission was named, and yet no report is ready for presentation nor is there any likelihood of the inquiry being concluded for some months. The work has been proceeded with in an altogether too indifferent and haphazard a manner. Little wonder is it that the people are demanding something in the way of more definite results.

No fair-minded, unprejudiced individual desires to see the labors of the Commission curbed or restrained in any direction. On the other hand, everything should be pressed with the utmost vigor, all wrong-doing exposed and all offenders brought to justice.

If it is true that "some hides are to be nailed to the fence," as Hon. G. Howard Ferguson observes, let the painful process proceed. The former Minister of Lands, Forests and Mines, who is the newly-elected leader of the Conservative party in Ontario, recently said that he was prepared to defend every act in his department and would resist to the utmost "all attempts to malign his personal character or integrity."

While this is the utterance of the new leader, yet the representatives of the party, assembled in convention, on the very same day, passed a resolution to the effect that a "so-called timber probe" had been "directed exclusively towards an attempt to fix the odium of fraudulent and dishonest dealing upon them," and that the interim reports have been "unfair" and "biased" and confined to the administration of the late Government. A protest was also entered against the alleged political character of the Commission as subverting the "dignity and the independence of the bench."

It is easy to condemn and denounce, to hurl charges of partisanship and animus. The convention, however, did not offer one word of helpful, constructive criticism or intimate in any practical manner how the charges could or should be investigated, if not a judicial commission.

It is time that the playing to the gallery ceased and the cries of political persecution dropped. Let the Timber Commission go thoroughly into all matters covering the last quarter of a century, and every transaction, whether under a Liberal or a Conservative regime, against which there is a breath of suspicion, be completely exposed. No matter whose "hides are nailed on the fence," justice should and must prevail.

New developments are arising all the while. Some time ago one of the gentlemen associated with the Crown Counsel in the timber probe resigned and more recently the Crown Counsel himself stepped aside, the resignation being due, it is alleged, to his having retained a fee from a lumber company to act for them after he had been retained by the Government.

Further outcroppings are that another company has entered a counter-claim for $100,000 damages against the Attorney-General of the province for unjust and wrongful acts. It is demanded that a jury hear the case and it is declared the Attorney-General has been making use of his claim against the company for "ulterior purposes."

It is contended by the Commission itself that more evidence is desired in connection with the awarding of certain limits, examination of books, the duplication of returns and other revelations. In the meantime, the investigation has been halted until a new Crown Counsel is appointed.

The sooner that the Commission again gets under full speed, the better for all concerned. The Provincial Government, having put its hand to the plow, should not turn back until every evil, injustice and evidence of fraud or perjury relating to the administration of the Crown Lands affairs have been laid bare. There should be no favorites to play, no political stratagem, no indecision regarding the task in hand. If civil actions are entered by lumber companies and counter-claims presented, let the whole matter come out in the courts of justice.

Much was expected from the "Farmers' party" but its record and achievement so far in investigating the timber irregularities of Ontario has not been such as to win applause. The U.F.O. has yet a chance to redeem itself by proving conclusively that there is no political limitation in the present probe and decreeing that the inquiry extend over a quarter of a century instead of being confined to affairs of the last three or four years.

Getting More Efficiency from Bushmen

In all bush operations during the last three or four years lumbermen of Ontario, Quebec and the other provinces have complained bitterly and justly about the inefficiency of the lumberjack—his restless disposition and the constant "jumping of his job." Lumber and logging organizations have lost thousands upon thousands of dollars by paying the transportation of these men to the camps, only to have them leave without cause on two or three days' notice, and in some instances not going to work at all.

Then the organization in the woods has been constantly upset by a stream of ingoers and outgoers. One has no conception of how restless men have been during the past few years, while their efficiency has decreased from 33 per cent. to 50 per cent. An illuminating example of the nomadic spirit of the ordinary bushwhacker is shown in a report sent to the "Canada Lumberman" recently by an operator in Northern Ontario. During the past summer, from the beginning of April to the end of September—six months—the firm had on its payroll 1,155 different men, and the average staff was 125 men. One may gain from these figures some conception of the number who "came and went"; in fact, it is declared that frequently there were as many laborers leaving as were preparing to go to work. The board was satisfactory, the sleeping quarters thoroughly modern, hot and cold shower baths were provided and no excessive hours piled upon the workers, yet such was the ebb and flow to the travelling fraternity that production was far from being what it should be. Hundreds of men lost many dollars in moving from place to place without any valid excuse or reason.

Now there is a surplus of labor, and men, who were formerly hanging back, are anxious to secure jobs in the woods; in fact employment offices are besieged by many for whom they cannot find anything to do. Several operators have written the "Canada Lumberman" saying that the present wave of unemployment has brought them relief, in that it is making men, who are already engaged in logging operations, more efficient, contented and progressive. For the first time in years they are not leaving in droves, but are quite disposed to hang on to the positions which they have, knowing that if they step out, many others are willing to step in, so large are the number of applicants at various centers. The crews in the bush are giving visible evidence of increased production. Some logging companies have reduced wages and it is stated that others will follow by the beginning of the new year.

It is a long lane that has no turn and an ill wind that does not benefit some one. The logging and lumbering companies, after many years of loss, patience, discouragement and difficulty are at last being rewarded by a more faithful performance of duty, fewer complaints, more continuity of service and greater output on the part of their bushmen. In the past it has been a case of the operator seeking men and offering all sorts of inducement in order to get out his timber. To-day conditions are reversed and fellows, who never could be induced to leave the city with its brilliant lights, picture shows and music halls, are now grateful for employment at even considerably less money than has been paid during the past few years.

"The greatest incentive to efficiency," declared a manufacturer the other day, "is the lessened employment. I never secured the best results from those in my services until I took down the sign "Men Wanted." Then production began to be speeded up, for the fellows already in my employ realized that they had to earn their money or be displaced. As long as the number of men available exceed the number required, we are generally sure of faithful, productive work."

Facing the Future With Courage

This is a critical period in the history of Canadian industry. Difficulties have arisen and an unexpected quietness developed in the lumber line as well as in all other avenues of activity. There is, however, no need for despair or pessimism. The man who does not lose his head during a crucial time is the one who is at all stages master of himself and the situation. He calmly meets every emergency and does the best that he can, with faith in himself and faith in the future. He is not on the mountain-peak of hope one day and in the valley of deep dejection the next. In other words, he keeps his head.

There are a few in the lumber vocation who seem to have lost all confidence in humanity, and the status of the industry. One would think, to hear them talk, that the bottom had dropped out of everything, the sun had ceased to shine and nothing but blackness and desolation could be discerned during the coming years. These men made good profits during the first six or seven months of 1920, and during the next three months they, no doubt, managed to clear expenses and earn a fair return of investment. If, during the last three months they have to take a loss, there is no reason why a howl or wail should be sent up like that of a lost soul. Averaging the good months with the bad, we venture to say that there is scarcely a lumberman, be he wholesaler, retailer or manufacturer, who during 1920 has not had a most satisfactory year.

Because things cannot always be kept at the peak and every enterprise ride on the crest of the wave, there is no reason for hauling up the flag of distress or becoming panic-stricken. It is how men and institutions conduct themselves in time of danger, doubt and loss that their true character and worth are revealed. Some of those in the lumber line today need more strength of character, steadfastness of purpose and buoyancy of disposition. The mercurial, volatile individual is never a leader in any effort. He does not play the game in a true, sportsmanlike style or with grim determination.

It is most important, therefore, that all those engaged in the lumber industry should set their faces steadily towards a saner adjustment of business and wisely and carefully meet the existing situation in an endeavor to place things upon a solid basis and stabilize conditions. Periods of extreme inflation and serious deflation are not conducive to permanency or productiveness and do not, in the end, make for the prosperity or happiness of either the individual or the industry.

Now is the time when all units should get together, and when co-operation should be the watchword. As was pointed out in a recent address by the Premier of Ontario, the present period of stagnation will soon pass if the people meet it in a proper spirit and view it in a proper light.

It is the duty of all to face the problem of deflation and face it squarely and fairly. These are not the days when the false principle of "every man for himself" should prevail, but rather is it an occasion when "a long pull, a strong pull and a pull together," will do much to tide the business world over hesitation and pessimism. Playing the game; and playing it honorably, openly and fearlessly, is the great need of the hour. Be aggressive and optimistic and do not leave too much to mere chance.

We extend the season's greetings and wish you and those whose happiness is yours a full measure of Christmas joy and success for the New Year

Studying the Forests of Ontario from the Air

Feasibility of Using Aerial Craft in Survey Work Amply Demonstrated—How Great Stretches May be Covered Rapidly and Completely

By Roland D. Craig, F.E., Ottawa, Commission of Conservation

The aeroplane has at last come in answer to the prayers of the timber cruiser. Few of us, who have bucked the brush with packs on our backs have not longed for wings that we might clear the impeding rocks, muskegs and windfalls and also that we might obtain a bird's-eye-view of the lay of the land. I might also add that some of us had little hope of acquiring them while we were on that job.

The old saying that one cannot see the forest for the trees is often true, but when flying over a tract one can see it spread out before him like a map the lakes, muskegs, burned areas and green timber and can record these observations with greater accuracy than is possible from ground reconnaissance without a very intensive survey.

In estimating timber two factors are necessary, first, the areas of the waste land and of the various types of forest, and second, the average stand of timber on each type. The areas can be secured from an aerial survey more accurately and in a small fraction of the time required by a ground survey. The composition of the stand and the relative quantities of timber can be judged within certain limits by an experienced observer, but, knowing the location and extent of the timbered areas, the estimator can eliminate the waste areas and confine his cruising to the productive lands and with a comparatively small amount of ground work can secure definite information as to quantities of timber.

Transportation is an important item in conducting a forest survey. It frequently costs as much and takes as much time to get a survey party to and from the tract to be examined as is required by the actual survey. In regions where lakes or large rivers are numerous, such as in eastern Canada, almost any area can be reached by a sea-plane or flying-boat in an hour or two from the existing means of transportation. Distances which require weeks of canoeing and portaging can be covered in almost as many hours by air-craft, as these machines travel at a rate of 60 miles or more an hour.

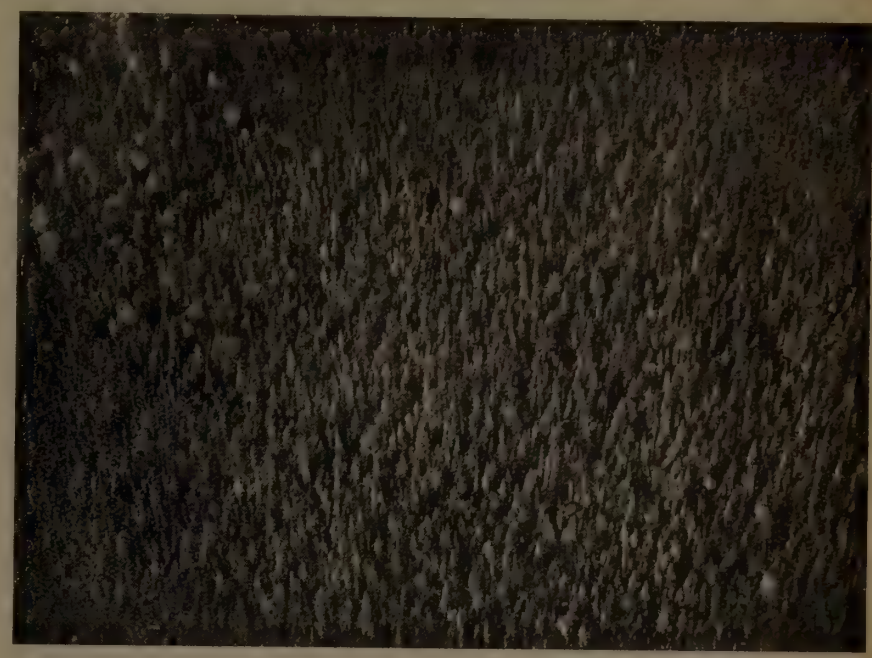
Through the co-operation of the Air Board, an experiment in aerial forest reconnaissance was conducted this autumn in the vicinity of Timiskaming lake by the Commission of Conservation and the Entomological Branch of the Department of Agriculture. Dr. J. M. Swaine, Chief of the Division of Forest Insects, by observations of the defoliated spruce and balsam trees, succeeded in determining the location and extent of the spruce bud-worm infestation which is spreading from the pulpwood forests of northern Quebec into Ontario. Flights were made from the base at Haileybury covering a radius of about 100 miles and extending south to Otter Station and Kipawa Lake, east to Lake Expanse and north to Larder Lake. This operation has the distinction of being the first aerial entomological study ever conducted.

Dr. J. M. Swaine, Chief of the Division of Forest Insects, Capt. C. McEwan, pilot, and Roland D. Craig, Commission of Conservation, landing at Haileybury after a 300-mile flight over Timagami Forest Reserve

For the purpose of determining the feasibility of using air-craft in connection with our survey of the forest resources of Ontario for the Commission of Conservation, Major Edgecombe and the writer attempted a reconnaissance of the region around Timagami Lake. We "camped" at a hotel in Haileybury and it took only a few minutes to get to our work in the morning 20 or 100 miles away.

In four days flying we mapped in the main types, such as coniferous, hardwood and mixed forests, recent burns, muskegs and clearings on approximately 1,800 sq. miles. Later we compared our aerial observations with what we could see from Timagami Lake and found that from 3,500 feet we had noted every block of any appreciable size of the various forest types.

On the return trip to Ottawa, a few days were spent in examining the area adjacent to Lake Nipissing, using Trout Lake as a base. As a result of this experiment, the Commission of Conservation is planning to conduct, with the assistance of the Air Board, an extensive aerial survey of the forests within flying reach of the National Transcontinental Railway in Northern Ontario during the coming summer. By this means, the existence or non-existence of commercial supplies of timber in these northern regions will be established in a very much shorter time and at a very much lower cost than in any other way.



An oblique view of a well timbered area on the north shore of Lake Nipissing. Note. That the main stand is spruce and balsam with a group of maples near the upper left-hand corner. Some white pine and white birch can also be distinguished

Believes that Cities Should Lend

On first mortgage, the loan companies will advance forty or at most fifty per cent. of the total value of a residential property, says a Toronto man. When the builder sells, this mortgage is assumed by the purchaser. But unless the latter is able to pay the remaining sixty per cent. in cash, a second mortgage must be drawn. In many cases this is taken by the builder himself—not to keep (for he would thus lock up his working capital), but to sell at the earliest opportunity. He knows that it will not fetch anything like its face value. In placing a price upon the property he has allowed for this fact. That is, he has charged the purchaser not only cost plus profit, but cost and profit plus the loss on the sale of the second mortgage. For that reason the second mortgage is to-day a substantial factor in the high cost of homes.

The builder of a $5,000 property will probably secure—and transfer to the buyer—a first mortgage for $2,000. The purchaser may have only $500 in cash. The builder is then forced to take a second mortgage for the remaining $2,500. He is lucky if he can sell it for $2,000. Who loses the five hundred? Not the builder if he can help it. It is safe to say that he has protected himself by charging just that much extra for the property in the first place. It is the buyer who pays this $500 for which he receives no value.

The city of Toronto should consider the securing of statutory power whereby it would be enabled to enter into such transactions by lending money on second mortgage. The loans might properly be confined to homes not exceeding a stated price, and the city would require to be satisfied that the builder was making only a reasonable profit.

Man Power Greatest Factor in Business Today

Personal Element, What it Constitutes and How It Can be Developed—What You Are Plus What You Know—How Progress is Made

Mr. A. L. Boyd, manager of the Sheldon School of Salesmanship, Toronto, in his able address recently before Wholesaler Lumber Dealers' Association on "The Personal Element in Business" said:

"You would do well to take to heart the ideas which have been so forcibly expressed by the previous speaker, and have each member of the Association make out its monthly credit report and submit it to the secretary regularly and promptly. Any man who has his ear to the ground these days can sense something of the situation that is coming and that will test the business ability of many men during the next six or eight months.

"If I were to visit any one of your institutions to-morrow, I would find with each institution just three powers by and through which you do your business. I would find there a certain amount of money at your disposal. I would find in the second place your equipment; that is to say your office, your stock, your records etc. This is your equipment power. Then, in the third place, I would find something else beside your money and your equipment. I would find man power. Just these three powers would I find. Now when you turn the searchlight of analysis on these three powers you do not have to search very long to discover that one of them is cause and two are effect. Destroy the man power of your institution but leave your money and equipment power intact. Your money and equipment would then rust in idleness. But destroy your money and equipment and leave the man power intact and your money equipment power will come into existence again, because the man power is the creator of the other two. The man power is the greatest factor in your business.

Profit Through Service Rendered

"Now the purpose of your business is to produce profit through the service that you render to those who buy from you. In other words, all your knowledge about how to build business is, in the final analysis, knowledge about how to serve those with whom you deal. You cannot continue to build business; you can get business for a while, but you cannot build business, in the absence of confidence. It is a well known statement that confidence is the basis of trade, but confidence will not continue very long without satisfaction. Without your customers being satisfied there is no confidence. The only way that you can satisfy your customers is by rendering them service of the right quantity and the right quality, and with the right methods of conduct in your relations with them. If we wanted a little more heat in this room our thoughts would immediately run, by the law of association, to the cause of heat—fire. We all know that it is a fact and not a theory that a little fire will create a little heat and greater fire will produce a greater degree of heat. No one will question that statement. I doubt if it is equally clear in the minds of all that a little service, or inefficient service produces, by the same way of life, a little deserved reward; and that a greater service or a more efficient service causes a corresponding degree of deserved reward. That is to say, we all recognize that fire is the cause and heat the effect. But do we see with the same clearness that service is cause and deserved reward the effect. In real life do we not oft-times find ourselves concentrating our minds upon the effect and failing to concentrate upon the building power of service. Note full well that if we see to the cause the effect—deserved reward—will take care of itself."

Mr. Boyd then made use of a diagram consisting of three horizontal lines to illustrate some of his remarks.

I IS R

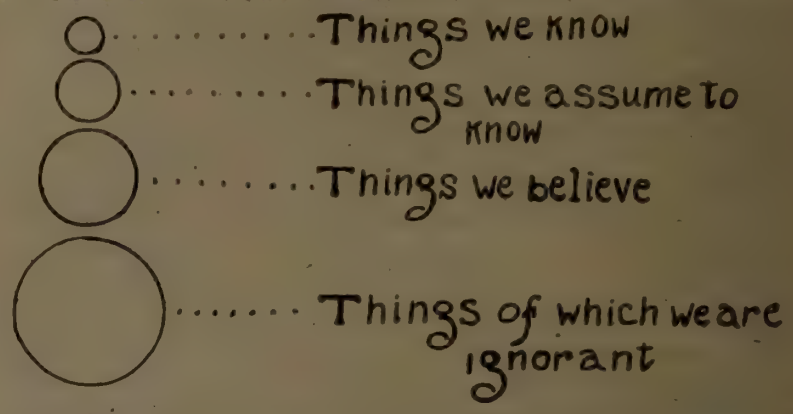
The last of these lines, he said, represented reward, the thing we were all after. The second line represented the cause of reward—service. And what was the cause of service, the thing that produced service? "It is the individual. The first line represents not only the individual, but the institution as well. The power of your institution, indeed, is the result of the sum of the power of the individuals from the president down; everyone on the pay roll.

"If we concentrate our attention upon individual, or personal power, the service will follow naturally by a law of life. How much service? Service in exact proportion to the personal power of the individual, or of the institution. And the deserved reward will follow the service rendered. For the man who really knows how to sell goods knows how to sell his own personal service as well. The man who tells me that he is working for less than he is getting; that he is worth more than he is getting, tells me in just so many words that he is a poor salesman.

What Constitutes Personal Power

"Now the question to-night is one of individual or personal power. Look well to the cause and the effect will take care of itself. Personal power of what does it consist? Your personal power consists of just what you are, plus what you know, and nothing more. I repeat. Your personal power to serve and therefore to earn consists of what you are plus what you know."

Mr. Boyd then referred to a magazine article which he had lately read containing a striking illustration of the point under discussion.

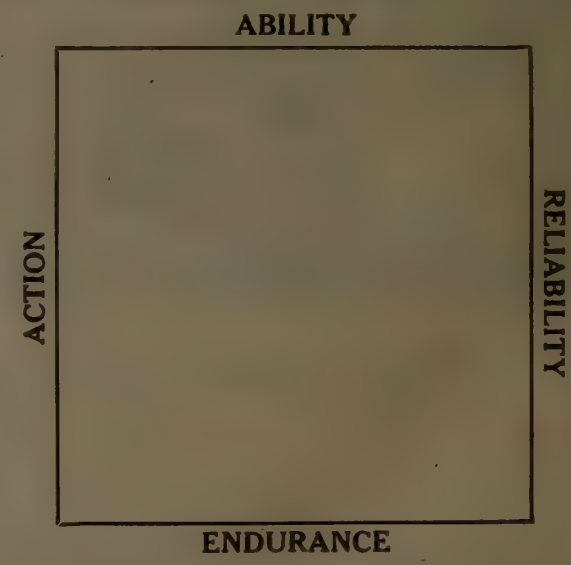


The illustration consisted of four circles of different sizes. The smallest circle represented things we know. The next represented things we assume to know. The third represented things we believe. The largest circle represented things about which we are ignorant.

"The more I thought over that to-day, the more truth I could see in it," Mr. Boyd continued. "Our personal power to produce business is based upon what we are plus what we know. Now, it is oft-times said that knowledge is power. It is not true. Knowledge properly applied is power. The value of knowledge depends upon the personality of the man applying it. The value of a dollar depends upon the man who is using that dollar. The value of an hour depends upon the man who is using that hour. The value of an idea depends upon the man who is using that idea. The value of your knowledge depends upon you; what you are physically, mentally and morally. So that, in the final analysis, knowledge plays a comparatively small part in the business of life and personality plays a mighty big part.

Persuasion, Purchase, Product, Profit

"'Salesmanship is said to be personal power to persuade plenty of people to purchase your product at a profit. Some people think that your power of salesmanship these days, especially in the past



few years, is your personal power to persuade plenty of people to purchase your product at a profiteer's profit. But any man knowing the facts knows that this is not true. The fact remains that your salesmanship is based upon your power to persuade, your power to

get the other fellow to feel as you feel, to see as you see and to act as you wish him to act; to get him to see that the transaction is of mutual benefit and that a transaction based upon any other foundation is dishonest and is not a business-building transaction, for business is service.

"Now let us look for a little while at this question of the personal power of the individual. I remarked that personal power consists of what you are plus what you know, and that the value of your knowledge is determined by what you are. Let us turn the search-light of analysis for a while on a simple diagram so that we may get clearly before us what we mean by that assertion.

There is a great deal of discussion on the question of personality. Like all other compounds it is more or less complex, and more difficult therefore to understand, but when reduced to its simple elements it is very clear. Let the top line of this square represent your physical condition. Your physique has very much to do with your business success. Your body is part of your personality. If you are not feeling very well we represent your physical condition by a short line. But if you are eating your three good meals a day and feel well, we represent your physical condition by a longer line.

But the question is not, are you healthy to-day, any more than are you wealthy to-day. You may have inherited health as well as wealth. The real question is, are you so living to-day in harmony with nature's fundamental laws as to guarantee your future health? Think of the number of men who drop off between 50 and 60 and 70, who ought to live to a ripe old age, just when they made money to enjoy and to spend wisely in the interest of others. Just when they have accumulated power to render a big service, they die, because they have given their attention to everything else except to one of life's essentials, the human body. The human body is the most wonderful creation—least understood and most abused. It is true that most of us know far more about how to take care of our motors than of our bodies. We simply rush on, all the time thinking that we are acting wisely, but the vast majority of us are disobeying nature's laws pertaining to our bodies.

Obediance to Fundamental Laws

"There are just seven fundamental natural laws which, if we obey them, we will be blessed with physical endurance. I will not take time to mention them tonight. If we obey them we will have physical endurance—the capacity to stay in the game; not only that degree of health which enables us to go about our work but which enables our mind to be always at its best.

But you may be ever so healthy and yet not succeed in business. Health alone is insufficient. Your intellectual life, the intellectual side of your personality plays a very important part in your success. With your intellect you can do just two things, and no man can do more with his intellect. You can think and you can remember. Now if you are a mighty thinker and if you have a poor memory we would have to represent your intellectual condition by a short line. Your intellectual condition would be represented by a long line if you are a clear thinker, an accurate thinker, a logical thinker, a creative thinker, a constructive thinker. Most men do not really think independently and creatively at their work. Most men somehow are limited in their thinking, to the work in hand. They cannot think beyond their job. They only think that they think. Some wise guy put it that they only think that they think. Thinking is the hardest job that we can undertake, but it pays. Now if you are a good thinker and if you have a good memory—and you think creatively you will not have much difficulty with your memory, your physical condition will be represented by a long line. A good memory is the natural result of creative thinking. We will assume that you are a good thinker and have a clear memory. We will let the top horizontal line represent the intellectual side of your personality—the side which is called ability, in an intellectual sense. The difference between one man's ability and another's is in his capacity to remember. But you may be possessed of a splendid physical condition and you may be a man of a high degree of ability and yet lamentably fail in business.

Developing Ability and Reliability

It is just as important that you have the reliability side of your life well developed, as it is that you have the ability side of your life. Reliability is made up of such qualities as self-confidence and cheerfulness. What is the good of an idea if you have not courage to use it? Do you suppose you can make a great success as a salesman if you are a pessimist? You cannot be a success if you are constantly taking the attitude toward life that was taken by the old lady who said she always felt bad when she felt good because the knew she was going to feel worse to-morrow. You cannot come into contact with the other fellow without him felling something of the qualities of life. You cannot build up a business by being dishonest. You can get business that way, but you are not in business for a year, but for a long time. You can make money at times by being dishonest. Many a man thinks he makes money by being dishonest, but dishonesty is a confidence killer. It tends to disintegrate the very foundation of your business. If a man makes money and practices dishonesty in his business, he succeeds in spite of his dishonesty, not because of it. He would make more money if he had added honesty to the qualities on his reliability side of life. The biggest factor in your life comes from the reliability side—that quality of certainty in you which causes you to look the other fellow square in the eye and get the other fellow to feel that he is being treated in every way at the hands of a gentleman.

"The function of management in your business is to take and work up men, money and equipment, but if you do not know how to choose men, each for his own peculiar type of work for which nature has best fitted him, then you are not a good manager. If you do not know how to recognize the outstanding characteristics of men, business for you is simply chance work and it is impossible for you to choose wisely and to direct and supervise.

The value of any man in your employ is determined by the amount of supervision that he requires. The more he can carry on his work without supervision, the more valuable the man is. This is just as true of you, Mr. manager as it is of your employees, with this difference, that an error of yours is more important than an error of your employees. Learn to supervise yourself, study the qualities that make up your own life and be able to put your mental finger upon its faults and to determine where you are weak and where you are strong. You are facing disaster if you permit the qualities on the reliability side of your life to be the inactive, destructive and foolish qualities. Look well to the reliability side of your life.

Faculty of Quick and Correct Decision

But you may be well developed on all these three sides of your life and yet fail. What about the faculty of quick decision as well as correct decision that every executive has to exercise, the faculty of interpreting facts clearly and rendering a quick decision? What about the faculty of despatch? Many a man takes twice the time that is needful for doing the things he undertakes. And what about initiative? Many failures in life are caused, not by lack of opportunity, but by lack of the capacity to see and to sieze opportunity. It is the capacity to create opportunity that counts. That is what your salesmen are doing. That is your business—creating opportunity for your firm to serve the public. Are you creators of opportunity?

Do you love your work? Was it Elbert Hubbard who said, if you do not love your job don't worry about it—some other fellow will soon have it? The man who fails to fill up properly the hours for which he is paid, is dishonest. It is just another form of stealing. The man who does not do more than he is paid for, who is not willing at least to do more than he is paid for, is very foolish. Just keep your eye on that man who becomes desperately interested in his work that occasionally he forgets his meals—forgets the time—looses himself in his job; the man who puts his entire personality into what he is doing. He is the fellow who does not stay long on that job. There is a demand for that type of man. These are the qualities that pertain to the action side of life. The degree to which these qualities are developed, plus your physical condition, determine the size of that square. The total sum of all these faculties is your personality—what you are. The square represents your personality and the degree to which your faculties are developed determines the size of the square, determines the actual practical use to which you put your knowledge, and determines it with absolute accuracy. It, therefore, determines your service rendering power, which in turn determines your value.

All Men Have Their Weak Sides

"Now the question arises—I have yet to meet on the streets of Toronto any man, anywhere, so symetrically developed as to have his personality represented by a perfect square. We all have our weak sides and the question is how does the presence of a weakness affect our earning power. Suppose, for illustration, this (pointing to the action side of the diagram) were your short side. Suppose you are only one half as active intellectually as you are able. How would that affect your earning power? Now I am going to make a statement that is not absolutely, scientifically true, but so near the truth that for all practical purposes we can accept it. Your actual earning power will be equal to the square of the shortest side. If you are only one half as active as you might be, you will earn only one quarter the money you would earn if you got busy and developed the faculties on the active side of your life. Do you know which is your shortest side. I am not talking about fault or failure on one side or the other, it is the shortest side that countts. Do you know which it is? If you do not, have you much of a chance to actually increase your earning power?

"It is a law of life for each man to develop the long side and to leave the short . This is a fact and we had better face the facts. The truest business spirit is to face the facts fearlessly and then adjust ourselves to those facts. Do you know which is the shortest

side of your life and what faculities are responsible for the shortness? And do you know how, having discovered these weak faculties, to develop the corresponding success qualities so as to greatly increase the length of your short side and thus increase your personal power?

"Most men think they have a pretty good introduction to themselves. We are the last individuals to whom we get a good square introduction. I have yet to meet the first woman whose estimates of her husband's qualities coincide with his estimation of his own qualities. The real question is, have we ourselves in hand? Are we working on the job of developing the man power within our institution—ourselves and those whom we serve? Personality is the greatest power in business. It is the greatest power in salesmanship. It is the thing that determines the value of our knowledge. If you get busy on this question, if you form the habit of looking within yourselves to find the cause of your failure and not blame it upon external conditions, then you are going to get some place. You are going to make progress.

It is just exactly twenty years this month since the late Andrew Carnegie gave an address at Montreal to the students of McGill University at which I happened to be present and I was greatly struck with his words. He was giving a talk on the secret of his financial success, and by the way, he had been invited to do so in order that he might have an opportunity of contributing something to McGill University. He said, among other things, "I spent much time studying how to discover my personal qualities, how to develop those qualities and how to make them effective, while others fixed their eye on the dollar and then wondered how I accumulated my wealth." Others, he said, busied themselves through the long years trying to secure the dollar that was closest, only to awaken at last, if indeed they ever did awaken, to the fact that the man who turns his attention to the study of himself and how to develop the qualities that comprise his personality, even though it be but for an hour a week, will outdistance his fellows in the race for money."

Big Opportunity for the Retail Lumberman

By W. Arthur Lynn

Mr. Retailer, are you taking your part in the practical publicity work which has gained a firm foothold in your industry, or are you sitting back indifferently as lumber merchants did in days that have passed and saying. "You can't use publicity in the lumber business?" Now is the time to think up something original, something worth while, to extend your business, not next month or next year, but to-day.

Get into the game at once and graduate your business from that time-worn and abused description "the lumber yard." Your business is a retail one, just as much and without exception as the furniture dealer's and the lumberman can advertise his goods as attractively by featuring the finished home as the furniture man features and illustrates the furnished room. The furniture dealer sells furnishings for the home, but the lumber merchant sells the main requirements for the building of that same dwelling. He has a big hand in the building materials of the garage, the silo, the additional sun porch and, if handy to the farm trade, will supply the lumber for the new barn, implement shed and other farm buildings. There isn't another line of business in the land affording the retailer so many opportunities to introduce taste and science in selling as the lumber enterprise.

Not a few retailers in various parts of the Dominion, who are now conducting their businesses on a sound, modern basis, and using advertising and display space to great practical advantage, have attracted the attention of the "Canada Lumberman." One of the most prominent and, perhaps, showing the most activity is a comparatively young retailer in an aggressive town in Western Ontario. This man, whose business perhaps is rather well situated in a town of some six thousand population and surrounded by a prosperous farming district, is finding satisfaction in a vigorous advertising and publicity campaign. He is using the columns of his local newspaper to good advantage by displaying a well thought-out series of advertisements of cosy homes and other well-planned buildings for different uses. He has also found time to criticize his own surroundings relative to his place of business, and has converted the wall of his office building which faces the street, into an attractive show-window at a comparatively low cost. The improvement is proving exceptionally well worth while, in backing up his local advertising.

One of the many bright displays thought out was a miniature bungalow and garage of wood, painted in appropriate and tasty colors. This was not an expensive idea and a good deal easier to work up when one gives it some thought. The original and novel display was the subject of much comment and people stop on their way about town to see the window just as they halt to look in at the grocer's or haberdasher's. Do you not think this is a worth-while advertisement?

Another good display (and, incidentally in the window at the present time) is a group of doors and window sashes showing several practical designs of French and Dutch windows, panelled doors, etc. This window, while being attractive to the passer-by, is a great help to the builder for illustration purposes in aiding the prospective builder of a home to gain some modern ideas along these lines. While placing your business in a favorable light towards the home builder, the contractor will also unconsciously bring business to you if he finds you are aggressive.

These are only a few practical methods of modernizing the lumber business at present in practice by wide-awake dealers who realize the importance of an up-to-the-minute service.

People of to-day are literally craving for the introduction of art into their homes, something that will appeal to their sense of good taste. It is up to the lumber merchant to start the ball rolling by showing some real individuality to the consumer in the selection of attractive surroundings. Think it out by asking yourself, "Isn't there some way I can make my place of business rank as one of the attractive spots in the town?

While the foregoing suggestions may not fit in to every business, they may, possibly, inspire some retailers who are really anxious to elevate their businesses to a more dignified plane, increase their service to their community and secure for themselves a wider connection and larger turnover.

New Lumber Company Organized

The timber and lumber firm of W. & J. Sharples, Reg., of Quebec, has been reorganized and incorporated by letters patent at Ottawa under the name of W. & J. Sharples, Limited. This firm, which was established in 1818, at the death of Hon. John Sharples, came into full possession of Mr. Wm. Power, ex-M.P., who by right of purchase from the estate of his late partner, became the proprietor. Mr. Wm. Power, who has been associated with the firm as a junior clerk from the time he left school, sixty years ago, by sheer ability and close application to business, as well as integrity of character, rose step by step until he became a full partner. Realizing lately that he was now in the autumn of life, and desirous of showing his appreciation of the service rendered the firm by his sons and old employees, Mr. Power

Wm. Power, ex-M.P., Quebec

John Levie, Quebec, P.Q.

decided to form a small stock company with a capitalization of $1,500,000, in which are now associated as members of this company his sons, Mr. John Levie and other old and faithful employees.

At the same time Mr. Wm. Power, who has been the centre and sole owner of the Power lumber interests with its mills and timber limits, has also formed these interests into a private company in which his sons and old employees constitute the membership. This company has just been organized and incorporated under letters patent of the province of Quebec, under the name and style of "The Power Lumber Company, Limited," with a capital of $2,000,000, for the purpose of purchasing and operating certain mills, properties, limits and freehold lands, situated on the south shore of the River St. Lawrence. The company intends to purchase the River Quelle Pulp & Lumber Company and the Lafontaine Lumber Co., together with certain mills situated at River Manie and Lapointe in the county of Kamouraska and St. Appollina, in the county of Montmagny, also other lands and timber holdings in the vicinity. Montreal, Ontario and Quebec capital is interested in this company. The head office will be at St. Pacome in the county of Kamouraska. No stock, however, will be issued for public subscription.

A man has a right to expect to succeed in business only so long as he is entirely and unalterably on the square.

The Logship is Unbreakable and Unsinkable

She Can Weather Any Storm and Resist Ice Screwing—How the Craft is Built and Her Advantages in Transportation of Lumber Overseas

References were made in the English Press some months ago to the effect that the late Sir James Ball, Timber Controller of Great Britain, had announced that plans were under way in Canada for practical tests of shipping lumber across the Atlantic and the Pacific by means of demountable rafts.

It was then pointed out that, should the experiments prove successful, they would solve the problem of high ocean freights and at the same time afford easy facilities for transporting the forest wealth to Great Britain. The designer and patentee of the logship referred to is Mr. Alexander Livventaal, of Montreal, who has given the following information as to the construction and capabilities of the logship to a representative of the "Canada Lumberman."

The logship, says Mr. Livventaal, is not a ship in the common acceptation of the word "ship" i. e. a "bottom," but a cargo of sawn lumber, piled and fastened into the forms and lines of a flat sailing schooner. Cargo and ship are but one. On arrival at destination the ship is dismounted and nothing is left except sails, rigging, rudder, navigating implements, and fastening devices, which are packed and returned to the base to be fitted to another logship.

Thee Cargo and Ship Are One.

The logship navigates water logged; there is no water-tight hull, and, therefore, no calking. The logship is unbreakable and unsinkable, does not fear the Arctic ice, can weather any storm and resist ice screwing. She can sail on moderate smooth ice, break through it, cut the broken ice and push her way out.

The construction is simplicity itself and does not require highly skilled labor. Undertaken by a trained engineer, construction proceeds at the speed of output of the sawmill. There is no stevedorage nor piling. The pieces necessary to form the keel, the keelson, and the stiff backbone extending from stem to stern, and from keel to deck, as well as the binding members, are assembled ashore and floated into position, where they are fastened together. Lumber to be transported is carefully packed lengthwise and crosswise between the binding members and the backbone; every one of the pieces is attached to the next by means of a patent clip composed of a disc of steel, having sharp projecting pins on each face. This patent clip practically solidifies the entire cargo frame and binding members into a solid piece of wood.

Fore and aft the binding pieces are firmly secured to a running gunwale, extending from stem to stern, and to secure the whole and give it an additional safety, co-efficient five extra lashings composed of chains at the bottom of the ship and of steel wires on the sides, are brought together on the deck by five powerful double screws, the pressure of which can be regulated to suit the expansion resulting from the penetration of the water into the wood. This penetration is very small on the side of the log, but very great at the ends; therefore the ends of each piece have to receive a coat of tar. This is very beneficial to the wood and becomes the trade mark of lumber shipped by logship.

With a force of thirty laborers, led by one killed engineer and one killed carpenter, handling one hundred and fifty standards per day—i. e. five standards per man (a very low average)—the logship can be constructed in ten days; the fixing up of the rigging and the preparations to sail would absorb another ten days, and it may, therefore, be safely assumed that a ship containing and put to sea every twenty days of work.

The logship could not be constructed on the water during the winter, but could be constructed on launching ways so as to sail over hard ice to the fringe of the water, where it would break through and free itself under sail. The theoretical displacement of the ship is four thousand five hundred metric tons, this varying with the density of the wood. The total length is 298 feet; loaded water line 267 feet; draft of water 17 feet; beam 49 feet; height 24 feet; height over water, forward 22 feet, amidships 7½ feet, and aft 15¾ feet. Assuming three tons per standard the logship would be composed of fifteen hundred standards, of which twelve hundred would be the cargo proper and three hundred the structure and binding frames.

Rides the Sea With Ease and Grace

By her homogeneous nature, giving a uniform distribution of weight throughout her mass, and by the unit construction allowing water to perpetrate through the small spaces left between the logs, the logship is very much less sensitive to the rolling effects of the sea than ordinary vessels. At the moment that the oscillation takes place the water forced on the sides of the ship percolates through all the spaces left free by the "grips" and is to some extent drawn in by the depression that is taking place on the other side of the vessel. The logship will also be less from pitching than other ships; by her design

fore and aft she is forced to lift on the wave. The fore part is constructed so as to protect the deck from "jumping in" seas. The regularity of the distribution of the weight of the mass is a factor in appreciably reducing the pitching.

The central backbone of the whole system, on which all the elements of the cargo are bound, is calculated so as to absorb all the shearing effects and moments of inertia to pitching or rolling. The strength of the logship is such that taking the co-efficients recognized by the Canadian Government and emanating from the testing station, and assuming that the logship is supported by the two extreme points of her keel, a load of 3,996 tons placed amidship would just equal her resistance.

The logship has the following characteristics: Ease of motion, stability of platform, rapid absorption oscillation, ease of evolution, free lift to the wave, and conservation of speed on a rough sea.

The effects of sea water on swan lumber are beneficial in so far as the sea water acts as a disinfectant. As the ends of the pieces are tarred, the amount of moisture absorbed is very small and dries up quickly. The "Rafnut," a raft constructed at Haparanda and towed to Ipswich in England, practically demonstrated that lumber can be transported by logship without any bad effect upon the wood, and at much cheaper rates of freight and insurance than by ordinary vessels. In the Livventaal logship the spacing of the logs permits the passage of water and air and thus prevents the formation of fungi and dry rot.

Reduces Cost of Freight to Minimum

The depreciation of merchantable value of the three hundred standards of lumber composing the stiff keel and binders is practically nil. The designer took care to select classes of wood used in paving streets, and spaced the bolts so as to have lengths suitable to cut the blocks. These blocks are sold at a higher price than running lumber. In this way the whole cargo, including the keel and binding members, can be disposed of at advantageous prices.

The logship, it is claimed, frees the lumber exporter from difficulties of shipping and reduces the cost of freight to the minimum figure. The vessel has been designed for trans-Atlantic and trans-Pacific work and it is calculated that she can weather the worst possible storms.

The scantlings, plans,rigs, and calculations have been submitted to the following authorities: The Minister of Shipping, Great Britain; the Minister of Marine, Canada; the Mercantile Shipbuilding Board of the Admiralty; the Board of Trade, and the Ministre de la Marine, France.

The Naval Staff of the British Admiralty has granted free navigation to this type of vessel.

Lloyds Registry had agreed to insure the ship against total loss at seven per cent. of the net value of the cargo plus 25 per cent. for costs and profits.

The total crew necessary for the sailing of the vessel is eight men, besides the captain.

The New "V-Bed" in Felling Trees

When Father Noah and his husky sons chopped down the trees from which to build the ancient Ark, they undoubtedly employed the "under cut" method in hewing, ran the risk of being injured by the "kick back" of the falling timber as it left the stump, and also very likely spoiled many feet of good lumber by reason of the "splinter draw" that ripped up the log.

Even before Noah's days, back to the time that the memory and records of man runneth not, and up to the present age of modernity, sawyers and lumber-jacks have used the same old "under-cut" method, honored by antiquity in chopping down trees, entailing the same menace to life and limb and the same wasting of valuable lumber.

This new "V-bed" method described by "Common Sense," has been evolved after careful study, exercise of ingenuity and patient experimentation by the Southern Pine Association, which is advocating its wide use by lumber producers all over the United States, as well as among its own subscribers in the South, seeking to give all branches of the forestry industry in the country the benefit of the discovery.

An idea of the importance of this new method is given in the fact that experts of the Southern Pine Association have estimated that if the "V-bed" method were applied to every tree now cut in the United States the saving in lumber would amount to the total annual products of several sawmills.

Twenty-five per cent. of the time lost due to accidents in the logging operations of Southern Pine mills last year resulted from the fall of trees, logs, etc. A large proportion of this was directly traceable to the "kick back" of falling trees. By eliminating this cause, the "V-bed" will produce a further saving in dollars and cents, but what is still more important, it will result in an inestimable saving of life and limb.

Possibly some unkind things have been said and written in recent years concerning the lumber industry, but regardless of any criticisms, it is a fact that in late years the producers of lumber and timber have exerted earnest efforts and expended large sums of money in the endeavor to conserve lumber, prevent and utilize waste and reduce to a minimum the hazardous risks of workers in the industry. In evolving the "V-bed" method of felling trees the object sought was the absolute prevention of the "kick back" accident, but according to the opinion of experienced lumbermen the other aims mentioned above have also been realized. Safety and efficiency go hand in hand. It has been proven in many lines of industrial life that as soon as safe methods and practices are adopted in any operation, the interest of the employees and the efficiency of the operation is sure to be increased.

Under the old method of cutting down trees a deep "under-cut" was made in the tree on the side on which it was to fall. The tree was then sawed through from tht opposite side to the base of the under-cut. If the falling tree fell into other timber or met with an obstruction, it was sure to "kick back" over the stump and often injured one of the sawyers. Furthermore, instead of the log breaking clean at the stump there would be a "splinter draw," ripping up the log from four to eight feet from the butt and damaging that much good timber. The "under-cut," 12 inches or more in length, was made in the lower end of the log, just above the stump, which caused a wastage of the undercut portion of the log when it was sawed up in the mill as lumber. Under the old method, only one of the two sawyers could hew out the under-cut at a time, the other member of the crew standing by doing nothing, while his partner was chopping.

Using the "V-bed" method, a deep V-shaped wedge, six to eight inches long, is cut in the stump portion of the tree on one side. By providing each sawyer with an axe the two members of the crew can chop the notch on either side of the V at the same time, thus performing that part of the work in half the time required by the old method. The saw is then started from the opposite side of the tree so that it will cut through and meet the upper points of the V.

The falling tree will break clean and pull no splinters from the butt, as the entire circumference of the tree has been cut or sawed, and the only possible breaking point is at the heart of the tree. The V-wedge remaining on the end of the log not only prevents the tree from "kicking back" over the stump in falling, but in fact actually causes it to jump away from the stump a distance of several feet.

Montreal Lumber Association Holds Annual

Interesting Report on Important Matters Arising During Past Year—Question of Wharfage Rates Not Yet Adjusted—The Officers for 1921

The members of the Montreal Lumber Association held their annual meeting in the Board of Trade on December 6th, Mr. G. W. Grier presiding.

The following are the main outlines of the report submitted:

Tariff Commission

Early in September, the Tariff Commission, composed of Sir Henry Drayton, chairman; Hon. J. A. Calder and Senator Robertson, began their itinerary, visiting the most important centers, gathering data and hearing evidence, for the purpose of revising the tariff. This association met on 13th October to decide if any change in the present tariff regarding lumber would be advantageous to the trade. A discussion brought out the fact that the removal of the tariff would flood a certain section of this country with an inferior quality of undressed lumber, which the Southern States are able to manufacture much cheaper than in Canada. It was thought, therefore, that no representations need be made by this organization before the Tariff Commission during their sitting in Montreal commencing October 15th, since the tariff now in force was satisfactory to the Lumber Trade.

Stop-off and reshipping arrangements on lumber, carloads for planning, tonguing, grooving, kiln-drying and sorting in transit.

In 1918 the railways proposed to increase the stop-over charge on reshipment to Canadian points for domestic consumption from 1c to 2c per 100 lbs. This was objected to, and no action was taken by the carriers. Again in 1919 (see last year's Annual Report) the same proposition was made, and the question was the subject of a conference with representatives of the carriers at Toronto on the 16th May, 1919, since which date, nothing further has been heard in the matter.

General Increase in Freight Rates

In July last the Railway Commission made application to the Railway Commission for authority to make a general advance of 30 per cent. in the tolls for the carriage of freight, and later in that month, owing to the award of the United States Lumber Board providing for a large increase in wages to be paid the Railway Enployees, supplemented this demand by an application for a further increase of 10 per cent. following the increase that had been allowed in the United States by the Inter-State Commerce Commission. While the general increase was not opposed, exception was taken at the hearing before the Railway Commission, to any increase in switching, diversion reconsignment, stop-over, demurrage, weighing and other charges for special service. The Railway Commission's decision in general order No. 308, effective on September 13th, which authorizes a general advance until the 31st December, 1920, of 40 per cent. in the eastern freight rates and 35 per cent. in western freight rates. Commencing the 1st January, 1921, these percentage increases will be reduced to 35 per cent. in eastern territory and to 30 per cent. in western territory. The order provides that the increase shall not extend beyond 1st July, 1922, and also, that no increase be made in the tolls for switchmen, reconsignment, demurrage and other special services. The increase between points in Canada and points in the United States become effective generally on August 26th.

Shortly after the order was issued, an appeal against the general increase in rates was taken to the Governor-General-in-Council by Ontario, Manitoba and other interests, with the result that the Railway Commission has undertaken to make an inquiry into the freight rates in Eastern and Western Canada with a view to ascertaining if any unjust discrimination exists against Western Canada as compared with Eastern Canada.

Weighing of Carload Freight Traffic

On 25th May, 1920, the Canadian Freight Association issued tariff 14 in this connection, this tariff being published on the authority of general order No. 283 of the Railway Commission, dated February 14th. Exception was taken to some features of the new tariff by the Wholesale Dealers' Association, at a hearing on 15th June, at which your association was represented. Decision in regard to this subject is pending.

Proposed Increases in Montreal Wharfage Rates

This matter was referred to in last year's report. The Harbor Commissioners By-law, No. 92, the effective date of which, owing to the action of the council of the Board of Trade, was postponed until January 1st, 1920, finally because operative on April 1st. and has been in force for the whole season of navigation, despite the efforts of the committee composed of members of the Board of Trade, Chambre de Commerce and the Railway and Shipping Interests, to secure the adoption of a more equitable wharfage tariff. A new Wharfage Tariff has recently been adopted by the Harbour Commissioners, making some slight modifications but does not yet meet with the approval of the committee appointed to deal with the matter. The question is still receiving the attention of the committee whose deliberations will no doubt result in further presentations, to the Minister of Marine and Fisheries.

The Officers for Coming Year

The officers re-elected were as follows: Mr. G. W. Grier, president; Mr. D. H. McLennan, vice-president; Mr. F. W. Cotter, treasurer; Mr. H. C. Beatty, secretary. Directors: Messrs. J. P. McLaurin, G. C. Goodfellow, W. A. Filion and S. F. Rutherford.

Mr. Grier was nominated for re-election to the Council of the Board of Trade.

G. W. Grier, Montreal
Re-elected president.

D. H. McLennan, Montreal
Re-elected vice-president.

F. W. Cotter, Montreal
Re-elected treasurer.

Lumber Cut in Ontario Decreasing

Men for the Camps are Now Numerous and There is Less of the Roving Spirit Evidenced

In connection with the lumber production for the coming year some interesting information has been received by the "Canada Lumberman" from the Crown timber agents in various parts of Ontario. It is a little early yet to gauge definitely the situation, but there will, no doubt, be a fair cut in Ontario during the coming season. Men are more plentiful than they were and it is expected that in some quarters wages may take a drop after the New Year.

W. P. Christie, Crown Timber Agent of the Parry Sound district, says: "There are about thirty or forty camps operating in that district, employing about fifteen hundred men. The probable cut will be from forty to fifty million feet of pine and fifteen to twenty million feet of hemlock, spruce and hardwoods. Men were very scarce at the beginning of the season and are now plentiful, the rate of wages averaging from $75.00 to $80.00 per month.

P. J. Whalen, Crown Timber Agent, of Renfrew, says that judging by the present time, there will be about 150,000,000 feet, board measure, and 75,000 cords of pulpwood taken out between timber limits and settlers' lots. Wages for men have been ranging from $60.00 to $80.00 per month and shantymen were scarce up to about the 1st of December when they became more plentiful. The fall months have been exceptionally favorable for the taking out of material. Mr. Whalen says there is no flu or disease in any of the camps that he knows of and declares that shantyboys working from daylight until dark are as happy as the day is long and seldom think or want to strike. Most camps are supplied to-day with first-class cooks and an abundance of good healthy chuck,—much better than can be had in most city hotels."

"In my opinion," concludes Mr. Whalen, "if some of the unemployed in the cities would put in a winter in the lumber woods, they would return healthier and better men. I certainly wish the 'Canada Lumberman' every success and also extend best wishes to all lumber, mine and pulp operators in Ontario. I hold the highest regard for the jolly shantyboy and the miner who toils year in and year out at this line of work. They will, I hope, have a better home above when their life work here is o'er."

H. MacDonald, Crown Lands Timber Agent, New Liskeard, says conditions in that district are much the same as last year with possibly a little more pulpwood being taken out. The wages have not changed from those prevailing in 1919 to any extent, and now that farming operations are over, more men are available for woods work.

The Crown Timber Agent of Thessalon says: "There will be a reduction of about 20 per cent. in camp operations, compared with last year. Men appear to be very plentiful on the shore just at present. Heretofore wages have been high, $75 and in some cases $80 per month and board, but it looks as though exalted wages would be a matter of the past for this season. Camp supplies are much cheaper than last year, particularly oats and potatoes. Everything is on the down grade at the present time in the way of lumbermen's supplies. The mills all sold their stock last spring and are anxious to get the logs sawed in order to get the high prices, as next season may not be quite so favorable. There will not be many posts or ties or pulpwood taken out in this division this season, nothing only what comes off patented lands and sold lots.

A. H. Huckson, Crown Timber Agent, Sault Ste. Marie, says that the cutting in that district will not be as large as last year. There are not as many camps operating on pine, and owing to labor troubles and the high cost of camp supplies, the lumbermen seem to be curtailing their output in this wood. The pulpwood situation seems to be as brisk as ever but there are not many operators in the line of taking out railway ties.

Revival in Lumber Business Early in Year

A revival of business in the logging and lumber manufacturing industries will again become evident about the first of the New Year, this business gradually picking up until, by March, all of the camps and mills in British Columbia will have all they can do to meet the demands, from not only the home market, but from other parts of the world also, in the opinion of Mr. Mark T. Rector, manager of the International Timber Company, who was guest of honor at the monthly dinner and meeting of the Canadian Credit Men's Trust Association at the Hotel Vancouver, Vancouver, B.C., recently.

Mr. Rector based his optimistic prediction upon several factors, mentioning among others that the big railway companies, for so long out of the market, were again placing orders for all kinds of lumber, that many of the industrial concerns of the continent had extensive building programmes ahead, the farmers were in good financial shape and would be anxious to secure building materials, and also that the lumber yards in practically every part of the country were without stocks.

"Prominent lumbermen all over the country figured we would have all the markets we wanted long before this, and based this belief upon many important facts, all of which has come true, but still there is no demand confronting the lumber industry. As a matter of fact business is now practically nil," said Mr. Rector.

"The reason that business is at a standstill just now, is because there is a strike on among the buyers. With no market before us, we may as well stop for the time being, at least. I don't see any reason to worry, however, about the lumber business. There is a temporary slump, it is true, but the millmen and the loggers will get over it all right. The local market has been good. There has been an immense amount of building in Vancouver, and it has helped the industry over the rough spots. Salesmen are now out after the business, and that is a sign that we are coming back to earth again.

"During the last three or four years the lumber industry, in all its branches, has enjoyed prosperity. The first six months of the present year were the most prosperous in the history of the industry. In the succeeding three months this business slowed down, until to-day, as I have stated, it is practically nil."

He mentioned that while the Canadian, British, American and a large number of other markets had been open to the mills of B. C. and even those markets supplied by Norway and Sweden had been invaded, with the return of lower cargo rates, Norway and Sweden had been able to get back into those markets again. This had revealed to British Columbia operators that the cost of production would have to be reduced, and as a matter of fact a reduction of 25 per cent. out of the estimated 35 per cent. deemed necessary, had already been effected.

He expressed the belief that too much credit had been extended to some operators, and that others had had to suffer in consequence.

As a logging operator, he said that but for the stand taken by the men in this particular line of the industry the bottom would have fallen out of the lumber market some time ago. The millmen went after the loggers, he declared, as far back as last June, seeking a drop in prices which the loggers refused to agree to. Had they done so they would have been dropping them ever since, he contended, until the bottom had fallen out of the market.

New Brunswick Firms Reducing Output

The Victoria Mills, operated by the Fraser Companies, Limited, at Fredericton, N. B., cut about 13,000,000 feet during the past season. They are carrying over about 1,000,000 feet of logs at the mill and other quantities in the Nashwaak and other streams. The company have about 16,000,000 feet of manufactured lumber piled in Fredericton and will not, it is said, make more than half the customary cut this winter.

Stanley Douglas, Limited, cut about 6¾ million feet this year at their mill at South Devon, purchased from the York and Sunbury Milling Company, and the balance of a gross cut of 10 million feet was manufactured at the mill at Stanley. Mr. Douglas' intention is not to operate the mill at Stanley next season at all and to reduce the cut at South Devon to five million feet.

Town Council Operates Municipal Bush

The Almonte Town Council has fixed the price of town wood from the municipal bush at $8.75 per cord in four foot lengths. Speaking of undertaking, an Almonte paper states that the town bush has been a remarkable investment and one that has been appreciated by the citizens. It not only provided them with fuel but had the effect of regulating prices. In figuring what the cost of wood ought to be, the council decided that the price of stumpage should be $3.00.

At present there is ready for immediate delivery at the town bush about 125 cords of mixed four foot wood. It was cut last winter. There is also a large quantity of 16-inch sawed wood split. This was cut out of about 400 logs.

Exclusive saw logs about 950 cords of wood has been cut out of the bush and there is probably about as much as that left standing. Last winter 175 cords of hardwood and about 16 cords of softwood were delivered to consumers. Besides that there were 50 cords of hardwood piled at the market to dry, and about twelve of softwood.

It will be remembered that the council did a little bit of enterprise which was very favorably commented upon at the time. There were about 118 maple saw logs cut for new flooring for the town hall, etc. These were sent to Carleton Place to be sawn and dressed. Also 122 elm logs for bridge covering and 100 of spruce for general town work were cut.

Retail Dealers Talk Over Lumber Prospects

Declare that Farmers are Disposed to Hang Back in Their Purchases—Fair Building Outlook—Old Officers Re-elected for Coming Year

Representative in attendance and enthusiastic in spirit was the annual meeting of the Orangeville branch of the Ontario Retail Lumber Dealers' Association, which was held in Orangeville on Wednesday, December 1st. This district is a particularly live one; the members come together three or four times a year, consider local problems, trade outlook, business customs and time and labor-saving methods. The discussion is always animated but good-natured, and many valuable pointers and timely suggestions are brought out.

The first business attended to was the election of officers. J. A. Matthews of Orangeville, chairman, and J. B. Mackenzie of Georgetown, secretary, both desired to be relieved of their duties in order that new blood might be injected. They expressed themselves strongly in favor of the honors being passed around, but the other members of the association would not listen to their proposals. The result was that Mr. Matthews and Mr. Mackenzie will again be in office for another year. This makes the third term for each, which is a tribute to their faithfulness and interest in the work.

What Will Be Public Attitude?

Mr. Mackenzie, of Georgetown, opened the discussion by stating that he would like to hear from all present their opinion of what the attitude of the buying public would be toward lumber next May or June, and how the building outlook for next year was shaping up in their respective localities.

Mr. Howes, of Harriston—I do not deem it advisable for a retailer of lumber to buy more stock than he really needs. The price of all lines of farm produce is falling and this has caused the farmers to halt in their purchases. They believe that all other commodities should come down. I do not think the prospects for building any better than they have been. In my own district they are probably not as good for the coming year as last and this is one reason why I do not feel like stocking up very heavily.

Mr. Gorvett, of Arthur—My own views are the same as those of Mr. Howes. Many persons are looking for prices to come down and will not build if prices stay up where they are. I do not feel like stocking up at present. After the new year, values of farm products may rise, but not much. We all have to look out for the farmers and have had a good farm trade during the past year. There has not been much doing in the building line in my village and I am going slow on purchasing.

Mr. Henderson, of Cheltenham—Business has varied with me. One week has been good and another bad. I have of late received a number of outside inquiries for stuff. If hemlock can be retailed at $45 to $48, I think we can sell some to the farmers, and that there would be some building. This year I sold more stuff to farmers than last year.

Mr. Matthews, of Orangeville—The general tendency on the part of the buying public is to hold off.

Mr. Gorvett of Arthur—That is the trouble, everybody is holding off.

Mr. McCulloch, of Brampton—Business with us has been good all the year until last month when it fell off. Every inquirer has been saying that he will wait until prices come down a little more, but stocks are so low that we will have to stock up soon. I had a traveller in my office the other day who dropped the price of hemlock seven dollars from his first quotation in order to induce me to buy a carload. We have had more lumber travellers calling upon us during the past few weeks than ever before in an effort to make sales.

Mr. Gorvett said that he had heard of one firm up north which had cut the wages of their bushmen from seventy to forty-five dollars a month.

What Manufacturers Are Saying.

Mr. Matthews—Mill men say that if they cannot get more for their lumber they are not going to cut any.

Mr. Dixon, of Grand Valley—The farmers are not going to buy more lumber next year and I am not selling as much as I did. Farm stuff has been coming down in price and it has kept the farmers from buying.

Mr. Matthews—There is not as much timber being cut in this section as last year.

Mr. Mackenzie inquired if the Ontario Association of Retailers could not consider employing an advertising firm to put the case of the retail lumbermen before the public and educate purchasers that lumber prices were becoming stabilized.

Secretary H. Boultbee, of Toronto, explained that such a plan would involve a very large expenditure and the results would be doubtful. The same question had been discussed informally by a number of wholesalers in Toronto and it was found that to tell the public that lumber was reasonable in price but that other lines were up would be very costly. The conclusion arrived at was that the time was not ripe for such action. Brick, hardware, glass, labor and other things had not come down the same as lumber and it was the opinion of those who talked over the matter, that these also would have to drope in price.

Mr. John B. Reid, of Toronto, president of the Ontario association, when asked what he thought the attitude of the public would be next spring in regard to lumber, naively replied that if he could tell what the public was going to do three months from now, he would not be trying to sell lumber to-day. They could only guess what the public was going to do. If everything else was going down lumber would also reach a level. Millmen were saying that lumber could not be

Member of executive of Association.

produced for less than what it was selling for to-day, but retailers would find out, if they looked back over a period of years, that lumber has been sold for considerably less and that the manufacturer has raised the same cry annually. The question resolved itself into one of what the public was willing to pay for lumber and the demand would fix that.

"Stock up with what you really need and buy as cheap as you can," was the advice tendered by Mr. Reid. "Do not hold on to what you have too long. Get rid of some of your high priced lumber if you can replace it for less.' These are not normal times and if you cut prices to get from under, no one can find fault with you. Every one is in the same boat." He would not advise his hearers to sacrifice their stock, however, unless they could replace it with lumber at a less figure and if they could do so, the difference represented a profit. Money was the principal thing to get hold of to-day. When you think things have got to the bottom buy. In the meantime, keep your stocks low, and dispose of what high-priced stuff you have if you can get your money out of it. Look well after collections and give short credits.

Let Wholesaler Carry the Stocks.

Continuing, Mr. Reid pointed out that there was not much to be gained now by laying in a large quantity of lumber in the yards, keeping it there until spring and paying men to shovel the snow off the piles all winter long.

"You have," he added; "carried the stocks in the past and why not let the wholesaler carry the stocks until the spring and pay interest on the investment, insurance, etc. Even if you do have to pay a dollar or two per M in a few months from now than you have to at the present time, you will have saved the difference in snow cleaning and interest charges. If everything else continues to go down lumber will follow suit." Mr. Reid pointed out that in normal times the retailer should get a gross profit on his lumber of thirty-three and one-third per cent. on the cost delivered in his yard, in order to cover all charges and make a fair margin.

Mr. Mackenzie said that he did not expect that any contracts for building would get under way in Georgetown until May or June next and that lower lumber prices would not in the meantime create any more demand. If he could make a profit on replacement values he was going to let his lumber go in March for what it cost him.

Some discussion took place on what the different dealers were getting for merchantable hemlock and the figures ranged from fifty-two to sixty-two dollars, while the majority said they were disposing of shingles at two dollars a bunch.

Mr. Mackenzie also brought up the matter of supplying material for barns and said that he had developed quite a business in this line last summer by working in conjunction with the metallic sheeting men. Going in with others he had taken the contract for everything required in the structure. The farmer was anxious to know what the whole thing was going to cost. Barn plans could be obtained from Beatty Bros., of Fergus, along with tally pieces for any desired structure and he thought it well to consider meeting the wishes of the farmer in every way. The metal sheeting men were alive and awake and the retail lumbermen could work with them. That had been his experience and he had furnished all the wood goods required for a number of such buildings. A general discussion followed on the subject and it was agreed that looking after the barn business was worth while and that the retailer should co-operate with the farmer as far as possible in assisting him in his building problems.

What New Order Blank Sets Forth.

Mr. John B. Reid spoke of the benefit of organization from both a social and business standpoint and told of the high regard in which the retailer was held to-day, through co-operation and association. He also referred to the work of the Trades Relation Committee, with its powers of arbitration in adjusting disputes between wholesalers and retailers or manufacturers and customers and thus eliminating litigation. He outlined the new uniform order form, prepared by the Ontario Retail Lumber Dealers' Association, which will soon be ready for use. When a dealer buys a carload of lumber he will be able to use this form and set forth clearly the quantities, grade, price, terms, delivery, etc. Then there will be a certain date for the order to be confirmed by head office and returned to the retailer. Until this confirmation is obtained, the retailer has a right to cancel the order. After confirmation has been received, the order becomes a contract. Heretofore retailers often purchased lumber from a traveller and the order was not confirmed by head office or the representative has sold the carload to someone else a few hours later for a dollar or two more per M, leaving the retailer in the lurch. The new order form would be a protection for both buyer and seller.

Mr. Reid also touched upon the benefits of a summer outing and how it was proposed to bring up the matter at the Ontario retailers' annual meeting of having a fishing club established and a camp opened on Lake Nipissing not far from North Bay, where there was excellent angling. Everybody, who was a member of the club, could get away for a few days from business and have a thoroughly enjoyable time at a comparatively small outlay.

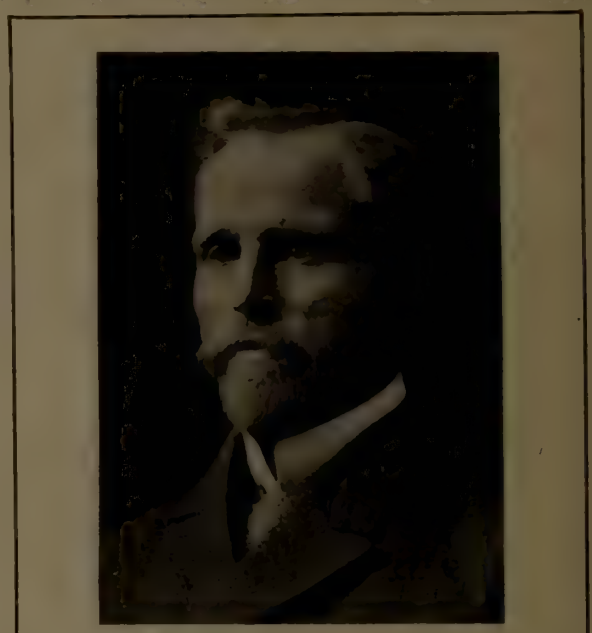
Among those present at the meeting were: J. A. Matthews, Orangeville, (chairman); J. B. Mackenzie, Georgetown, (secretary); John Howes, Harriston; W. G. Gorvett, Arthur; A. Henderson, Cheltenham; E. W. McCulloch, Brampton; Robert Dixon, Grand Valley; R. W. Tarzwell, Hillsburg; John B. Reid, Toronto, president of the Ontario Retail Lumber Dealers' Association; Horace Boultbee, Toronto, secretary of the association, and G. B. VanBlaricom, Toronto, editor of "Canada Lumberman," and others.

It was decided to hold the next meeting in Toronto prior to the annual gathering of the Ontario Retail Lumber Dealers' Association, which will take place during the first or second week in February.

Arthur Ludlam Joins Silent Majority

Many friends in the lumber industry will regret to learn of the death of Arthur Ludlam, which took place at Leamington, Ont., on Wednesday, December 1st. He had been ailing for many months and the end was not unexpected.

The late Mr. Ludlam, who was born in Beamsville, Ont., was in his 69th year and was the senior member and president of the Ludlam-Ainslie Lumber Co., Limited. He was engaged in the retail lumber business all his life, and at the time of his death was vice-president of the Southwestern Ontario Retail Lumber Dealers' Association. He first embarked in the lumber line at Comber, from which place he went to Leamington in 1893. There he entered into partnership with the late Thos. Fuller, under the name of Ludlam & Fuller.



The late Arthur Ludlam, Leamington, Ont.

Twenty-two years ago he acquired the interests of Mr. Fuller and conducted the business as an individual until 1904 when he organized the Ludlam-Ainslie Lumber Co., Limited.

Mr. Ludlam was twice married, first to Miss Elizabeth Ainslie, who pre-deceased him by twelve years, and second to Miss Sarah Summerfeldt, who survives. By his first marriage he had eight children, of whom seven survive. He was a life-long member of the Anglican Church of which in his own town he was a prominent member.

The funeral of Mr. Ludlam, which took place at Leamington on December 3rd, was largely attended, several lumbermen being present from a distance to pay their last tribute of respect to one who had always been an honor to the calling and an upright member of the community.

How One Retailer Views Conditions

"I am buying only one-third of the lumber that I normally require," remarked a leading Eastern lumber retailer recently. "I do not intend to make any more purchases at the present time than I can help. I do not know what the future has in store, but, certainly, very little stock is moving at the present time, and we will not be able to size up the outlook until after the first of the year.

"Farmers are complaining bitterly about their produce going down in value, and, as a good deal of our trade is with the rural community, the members of that community are not disposed to pay the present prices of lumber and are hanging off. Some farmers are becoming confirmed pessimists and believe that war prices should prevail on their products for all times. They are among the slowest to accommodate himself to the spirit of the times and the process of readjustment.

Bargains! Bargains!! Bargains!!!

By "Onlooker"

Before beginning what I have to say regarding "Bargains," I wish to contradict the impression gained by reading the heading and to state that bargains do not exist. It is quite an undertaking to write about something which does not exist; but the desire to obtain or to distribute something under that caption exists and in a lively degree, as we of the grip can testify.

Human nature craves excitement and oftimes evidences a desire to do something better or obtain its desires more easily than its neighbors. Coming directly to our own circle of business acquaintances, we frequently meet the dealer asking for something cheap. Cheap in grade or quality? Oh, my no! but cheap in price! Friends, it cannot be done. The products of nature or man cannot be bartered at less than their equivalent either in cash or personal returns.

We, who so often meet with these requests, must not allow ourselves to be deluded by thinking that we are doing a kindness to our dealer friend when we give in to his wishes and sell him even at a slight reduction off our lists. Nor must he think that because we assure him that his competitor has paid us more than we have just closed the order with him for, he will receive something for nothing. It will not work out that way.

Before attempting to show why there are no Bargains, let me say a word in explanation of the application of the previous words to the lumber retailer and his customers.

Better unsold than at a loss; better a temporary loss of friendship than a loss eventually of both stock and finally capital.

Who best determines one's selling price—the purchaser? No, the merchant who alone knows the costs which he must pay before he can set his selling price.

Catering to the public by offering bargains, will not, in your business as retailers, bring you a permanency of business so essential to success.

No one has a shorter memory than the public and no matter in what commodity a person deals, he gets what he pays for, no more, no less.

The greater the purchase price or sacrifice, the greater the consequent returns or achievements.

The law of recompense is just and while the present opportunities may appear extremely auspicious, the ultimate result can never vary for, as a man sells, so shall he balance his ledgers when the day of accounting arrives.

Always remember that the person purchasing lumber—and lumber is your business and you can forget all else—does not as a rule know anything of the early costs entailed before the articles, which he desires are in a fit and proper form for him to receive them; he does not know your costs, no matter how much he may know of business, and no two businesses can be placed on the same cost basis.

Nor does he expect to receive something for nothing. He expects to pay and pay justly, no more, no less. Therefore, if you hand him his purchase, assuring him of a bargain, he must realize that some one must pay more, so that you may give him the so-called bargain. He may also expect some day to be called upon to pay in excess of his just dues.

Competition, if just and fair to all, must be alive, not spasmodically but all times, and if healthy it will not harm either yourself or your nearest opposition.

Continuance in a straightforward honorable business, giving both you and your family an honest sense of justice to mankind and a fair honest living, is to be more desired than great riches, quickly attained. The latter invariably bring their attendant uneasiness of mind and knowledge that all is not well.

As retailers of forest products you have within your grasp the moulding of the appearance of the community which you serve—the dispensing, at a proper value, of our fast-vanishing resources of the forest.

To-day it should be your aim to conserve and not destroy; to distribute at its proper value—neither inflated—the products of our one time vast forests.

To return the respect of your fellow-man, to hold his confidence in your ability to give him value when he makes a purchase at your place of business, it is not necessary to give him none of the so-called bargains but to ask a fair and just return for the commodity which you sell.

It is easily understood that the problems of sale facing the wholesaler and retailer differ only in their frequency. The retailer is confronted many more times with the request for a cheap article than his brother, the wholesaler. It cannot be oherwise for he meets the mass of his customers every week whereas he does not desire the services of the wholesaler but occasionally.

Now I will try to show how I arrive at my opening statement that there are no bargains.

Surveying the forces of nature we find that the one, we all use, which is as yet in its infancy; and is, possibly, our most powerful servant, does not waste any of its substance. I refer to electricity, and the engineers tell us that there is no waste of electrical energy.

One might take various other servants of man and by analysis we would learn that they too are never wasteful of themselves. Man alone wastes, and pays eventually.

If you give of your substance to another for an unfair value, in return you must pay that which he fails to give you, be it in money or merchandise.

Should you give for too great a period, you will have nothing with which to continue in the position of a retail lumberman. You must pass before the exacting tribunal of public justice and give way to your more fortunate fellowman who provides for the future by asking and receiving a fair and just return for his labor and investment, be it lumber or whatever he offers for sale.

When the Jam Begins to Haul

By a Lumberjack

When you're pickin' and you're choppin' out the logs that key the jam;
While the rushin' of the water sounds like thunder in your ears,
You must strain your every muscle and you mustn't give a dam,
Nor give way to foolish weakness, nor give heed to nervous fears;
Just be catty, that's the watchword, and just keep your optics peeled,
For there's nothing that can save you if you fall:
You may say your prayers like lightnin', for your doom is surely sealed,
If you ever lose your footin' when the jam begins to haul.

When the log that you're achoppin' snaps so quick you slice the wind,
Or you're axe gets wrested from you and goes whizzin' out of sight,—
While the logs take life beneath you, and get workin' up behind,
Then it's time that you're amovin' and a plannin' for your flight.
There's a log a shootin' endwise and upon it you must ride,
There's another rollin' sidewise like a ball,
And you've got to tread them lightly, if you'd keep the sunny side,—
It ain't a time to linger when the jam begins to haul.

It ain't like reefin' up a sail, nor like shinnin' out a yard,
For the danger's up above you and around and down below,
When the logs once get aworkin', they're a workin' fast and hard,
And there's nothin' that can save you but to keep upon the go,—
You must ride that log a bouncin' that one thrashin' like a flail,
Light and catty you must keep above them all,
Though they're spewin' through the Black Jaws as if down hell's mill-tail;
If you'd live to draw your wages,—when the jam begins to haul.

Personal Paragrapes of Interest

Aird Flavelle, of Thurston-Flavelle, Limited, Port Moody, B.C., recently spent a few days in Toronto and Lindsay on business.

After an absence of several months in Great Britain, Mr. J. Bennett, of the Bennett Lumber Company, Limited, has returned to Montreal.

W. C. Shreiner, of Anderson, Shreiner & Mawson, wholesale lumber dealers, Toronto, has returned from a visit to his brother, E. H. Shreiner, wholesale lumberman, Pittsburg, Pa.

J. O. Cameron of the Cameron Lumber Co., Victoria, B.C., and George R. Elliott, of the Genoa Bay Lumber Co., Genoa Bay, B. C., were in Montreal and Toronto recently on business.

W. H. Crowe, of the Federal Lumber Co., Vancouver, was in Toronto lately on his return from a six weeks' visit to his parents in Scotland. While on his way West he called upon a number of members of the trade.

H. G. McDermid, of the Union Lumber Co., left recently for French Lick Springs, Ind., where he will spend a few days. He has not been feeling up to the mark during the past couple of weeks and hopes that the change will be beneficial to him.

Robson Black, secretary of the Canadian Forestry Association, Ottawa, and A. L. Dawe, secretary of the Canadian Pulp & Paper Association, were in Toronto recently attending the annual meeting of the Timberlands Section of the Canadian Pulp & Paper Association.

E. H. Newton, superintendent of the Thurston-Flavelle Lumber Co., of Port Moody, B.C., died recently at that place. He was born in Eastern Ontario but had lived in Vancouver and British Columbia for the past eighteen years. He is survived by his wife, three daughters and one son.

E. D. Warner, of Toronto ,eastern representative of the Associated Mills of Vancouver, received the sad news last week of the death of his mother, Mrs. Omar Warner, who passed away in Vancouver after an illness of some months. Mrs. Warner formerly resided in De-Cewsville, Haldimand county, and, besides her husband, leaves a family of six sons and two daughters to mourn her loss.

Ed. Killilee, late of Buffalo, N.Y., who has been a lumber traveller for some years, has joined the staff of the W. M. Ritter Lumber Co., Columbus, Ohio, and will look after their interests in Montreal and certain portions of Ontario. John Hall, who has been their Canadian representative for the past nine years, will devote his attention exclusively to Toronto, Western and Southwestern Ontario.

G. M. Strong has opened an office at 403 McGill Building, Montreal. The firm—established in 1859—own a sawmill and a stave mill at Cambria, P.Q., which were rebuilt last year. The Montreal office is the selling office for the mills, and also does a wholesale business in general lumber, specializing in spruce and hardwoods. Mr. Strong served overseas and attained the rank of Lieut.-Col., being latterly attached to the forestry branch.

Angus McLean, vice-president and general manager of the Bathurst Lumber Co., who recently returned from a trip to Europe, was accorded a warm welcome home by the citizens of Bathurst. All the business men assembled to do honor to one who was held in very high esteem. Mr. McLean was presented with a walking-stick, emblematic of the support of his fellow-townsmen in all his undertakings. He made a fitting and graceful reply.

The many friends of Col. Thomas Gibson, of Toronto, vice-president of the Spanish River Paper Mills, and of Joseph G. Gibson, secretary of the Spanish River Paper Mills, are extending sympathy owing to the death of their father, Joseph Gibson, of Ingersoll, who passed away recently. Mr. Gibson was a leading figure on the platform, in the church and in temperance circles, and was one of the most widely known men in Ontario. Since 1882 he had been postmaster of Ingersoll.

Walter T. Newman, secretary of the British Smelting & Refining Co., Limited, Montreal, sailed recently for London at the request of the principals of the firm. The object of his visit is to attend a joint conference between the Montreal and London head-offices, which will draw up a programme of expansion for 1921. Mr. Newman takes with him a report of the progress of the Canadian company, which has met with a gratifying reception in the introduction of Canadian-made "Stanley Process" babbitts and alloys.

Andrew Martin of the Cochrane Lumber Co., North Bay, lost his life recently while hunting. He and a young man were going down a hill. The latter was walking behind, when his gun struck a stump and discharged a shot which went through Mr. Martin's body. When a member of the rescuing party reached Mr. Martin, he was able to talk and became unconscious before the others came up. The body was brought to North Bay. Mr. Martin was a man of about 60 years of age and leaves a wife and grown up family.

Mr. Barclay Makes Change

L. D. Barclay, Toronto, Ont.

L. D. Barclay, of Toronto, who for the past eight and a half years has been connected with the Canadian Western Lumber Co., Fraser Mills, B.C., is leaving the service of that organization and at the first of the year becomes associated with the Central Canada Lumber Co., Excelsior Life Bldg., Toronto.

Mr. Barclay is widely known throughout eastern Canada as an able salesman and has established a strong connection with the trade by reason of his genial disposition and pleasing personality. His first position was with the R. Laidlaw Lumber Co., Toronto, with whom he spent three years in various capacities, and in 1909 he went west and for a year and a half was tally man for the Canadian Western Lumber Co. He then returned to the east and joined the selling end of the firm, covering Toronto and Ontario. For the past six or seven years he has been eastern sales manager. He is one of the pioneer salesmen of B. C. forest products in Ontario and booked for many a retailer his first car of Douglas fir. Mr. Barclay carries with him in his new position with the Central Canada Lumber Co. the best wishes of his late employers for his continued prosperity and success.

Lumbermen Take Part in Worthy Work

In the recent Federation of Community Service campaign, conducted in Toronto, during which nearly $4[illegible],000 was raised to carry on the work of forty-nine charitable and humanitarian institutions, the lumbermen took an active part. D. C. Johnston, H. J. Terry and A. E. Clark captained teams, while F. H. Bigwood was chairman of one of the districts. All these gentlemen did aggressive work for several days and among the lumbermen who ably assisted were: C. A. Westley, Maurice Welsh, John Hillock, Wm. Weller, Walter Davidson and others. In every patriotic, relief or effort of a public character that has been made in Toronto, the lumbermen have always played a prominent part and given liberally of their time and money. All the workers in the recent campaign were entertained on the last night by A. E. Clark and O. H. Moore, who proved to be genial hosts. A pleasant time was spent in the wind-up of a strenuous week.

New Pulp Industry for Arnprior

A plan of industrial development which must mean a great deal to the progress of Arnprior, Ont., is in process of being worked out by McLachlin Bros., Ltd., and the proposal to increase the company's fixed assessment is to be voted on by the ratepayers at next municipal election. The project is to build a solid concrete dam across the Madawaska River, 150 feet north of the present mill bridge, and develop at once 2,000 horsepower electric energy, carrying it to the point at the mouth of the river, where a pulp-grinding mill will be built of an initial capacity of 30 tons a day.

The company's present fixed assessment is $125,000, and a by-law is prepared providing for a fixed assessment of $150,000 for the next ten years.

Miss Oakes Weds Mr. Pine

When Miss Ada Oakes, daughter of Mr. and Mrs. J. C. Oakes, of Washington, D.C., became the bride of Walter Pine of Salisbury, N.C., recently, the pair had a "wooden wedding." For instance:

The Groom—Walter Pine.

The Bride—Miss Ada Oakes.

The Best Man—Robert L. Birch.

The Bridesmaid—Anna Lee Laurel.

The Preacher—The Rev. Oscar Wood.

The couple went to Hickory, N.C., to spend a week with the bridegroom's aunt, Mrs. E. W. Shingle.

Ottawa, the Picturesque Capital of Canada and Mecca of Canadian Lumbermen on January 12th and 13th, 1921

Opening of the last session of Parliament, which took place in the new building

Rideau Hall, residence of his Excellency, the Duke of Devonshire, Governor-General of Canada

Vista looking down the Rideau Canal, showing the locks, Inter-provincial bridge over the Ottawa River, and Laurentian Hills. On the right is seen a portion of the Chateau Laurier where the Canadian Lumbermen will hold their 13th Annual Convention on Jan. 12 & 13 next.

Woodland's Section Holds Fine Meeting

An important meeting of the Woodland's Section of the Canadian Pulp & Paper Association was held at the King Edward Hotel, Toronto, on December 8th and 9th. One of the most important matters, which came up for consideration and discussion was the use of Laurentide Co. of Grand Mere, Price Bros. & Co. of Quebec, and the Spanish River Pulp & Paper Mills of Sault Ste. Marie, are all employing aerial machines in fire patrol and photographic work, and several of their operatives took part in the discussion.

Dr. C. D. Howe, acting dean of the Faculty of Forestry, Toronto University, gave an inspiring address on "What Can Be Done with a Few Culled Acres," and Ellwood Wilson, chief forester of the Laurentide Co., Grand Mere, and president of the Canadian Forestry Engineers, gave a timely and edifying report on the Imperial Forestry Conference held last summer in London, England.

Brig.-General J. B. White, Montreal
Chairman of Woodlands Section.

R. O. Sweezy of Montreal, spoke ably and well on "The Advantages of Planting, Seeding and Natural Re-growth in Forestry," and H. Graeslund, a graduate of Stockholm University, and a member of the staff of one of the largest pulp producers in Sweden, who has been spending some months in Canada enquiring into pulp and paper conditions, was present and delivered a most interesting talk on "Forestry Progress in Sweden."

This was the first meeting of the Woodland's Section that has been held outside of the Province of Quebec, and it will naturally stimulate wider interest in the worth and work of the organization.

The Woodland's Section, which was instituted a couple of years ago, is a live branch of the Canadian Pulp & Paper Association, and embraces in its membership representative woodsmen from all over the Dominion. Brigadier-General J. B. White of the Riordon Co., Montreal, who commanded the Canadian Forestry Battalions in France during the war, is the chairman of this section, and A. L. Dawe of Montreal, is secretary.

Banker Held on Charge of Theft

John Stanley Bancroft, Assistant Manager of a branch of the Merchants Bank of Canada, Vancouver, has been arrested on a warrant issued by Manager A. C. Fraser, charging him with the theft of $45,000 in Victory bonds, the property of William Day, Managing Director of the W. H. Day Lumber Company, and placed within the bank for safekeeping. Phil Gevurtz, broker and president of the Gevurtz Lumber Company, was also arrested and charged with having conspired with Bancroft in the theft. Another warrant sworn out by the bank charged Gevurtz with obtaining money from the institution by means of a false statement.

Will Cut on Much Reduced Scale

Winter is here in earnest, with from six to eight inches of snow on the ground, and the river closed to navigation for another year, says a correspondent from Gagetown, N.B.

Lumbering operations have started for another season, but the cut will be much smaller this year than last, owing to the conditions prevailing in the lumber market. Most of the larger operators are going into the work on a much reduced scale, and a number of smaller operators are not planning to carry on any lumbering this season. Last year nearly eight million feet was cut in the vicinity of Gagetown, the largest cut in the history of lumbering operations here. In this area, between Upper Gagetown and the Otnabog Lake, about two and a half million was cut by Reid Brothers, other large cuts by Fox Brothers, E. C. Atkinson Lumber Co., Fred. W. Cameron, Gilbert Stockford and Donald A. Adamson, as well as McKeague Brothers, H. and G. Law, D. Moore & Son, Mahoney & Owens, Wm. C. Belyea, F. S. McAllister and others.

Breezy Jottings from the East

Lumber mills throughout the province have all ceased operations for the season and from present indications sawing will be considerably curtailed next season.

Hugh Chisholm, of New York, arrived in St. John on December 2 from Cape Breton and left in his private car for Montgomery, P. Q. He is interested in pulp and paper manufacture and was formerly president of the International Paper Company. When interviewed by a representative of the "Canada Lumberman," he said he had nothing to say regarding his visit with the exception that it had to do with pulpwood.

A satisfactory settlement of a claim of the Bathurst Lumber Company against the Canadian Government Merchant Marine for towage was effected in St. John recently by an arbitration board consisting of Captain A. J. Mulcahy, representing the Bathurst Lumber Company; C. J. Warkman, of Halifax, representing the London Salvage Association for the C. G. M. M.; and Captain Neil Hall, of Halifax, as the third party. The action arose out of the towing of the tugs Betty D. and Nepisiquit, owned by the Bathurst Lumber Company, of the steamer Canadian Rancher from a stranded position in July last.

That employes interested in sport will derive untold benefits from the friendly competition seems to be emphasized by the co-operation of employers expressed in various forms. An industrial bowling league was recently organized in St. John and one of the first teams to enter was that of Stetson-Cutler & Company, the large lumber manufacturers. Allan Beatteay, son of F. C. Beatteay, is manager of the team. He is an ardent advocate of sport and has been instrumental in getting the younger members not only interested in this pastime, but also baseball. Although having to work hard all day the men showed remarkable skill on the diamond and made a wonderful showing. They are also proving themselves clever candle pin artists.

In the city of Fredericton mills recently discontinued sawing. The Victoria Mills, operated by the Fraser Companies, Limited, cut approximately thirteen million feet during the season and are carrying over about a million feet at the mill, and large quantities in the Nashwaak and other streams. The company has approximately sixteen million feet of manufactured lumber piled on their property. They do not propose to cut more than half what they did last year. Stanley Douglas, Limited, cut nearly seven million feet this season at their mill at South Devon and the balance of a gross cut of some ten million feet was manufactured at their mill at Stanley. It is said that Mr. Douglas will not operate his mill at Stanley next season, but will cut at South Devon, curtailing his operations to about half, or five million feet.

So marked has been the decline in pulpwood prices during the past few weeks that some operations, which had been undertaken in various districts throughout the province, have been discontinued and others are curtailing to a large extent. Elwood Burtt, of Fredericton, had arranged for a cut of between 4,000 and 5,000 cords, but owing to the said decline and the unsettled state of the market has called off his operations entirely. While the decline has been great in this district it is said to be more marked in Maine. An operator from the eastern part of the state had a contract calling for $18.50 for rough wood per cord, and $28.50 for peeled. To-day he is quoted as saying that he cannot get more than $12 or $13 a cord for rough, while the price for peeled is down to $19. The price for peeled pulpwood some time ago reached $30 a cord.

John Kilburn, a well-known retired lumberman of New Brunswick recently celebrated his seventy-eighth birthday at his home in Fredericton. Mr. Kilburn is not enjoying the best of health, two years ago having suffered a severe stroke of paralysis, which partially deprived him of the power of speech and rendered him quite helpless. For nearly forty years he carried on successful lumbering operations about the head waters of the St. John River, employing a large force of men and cutting annually from five to ten million feet of logs. He made a habit of visiting his camps frequently during the season and in the spring was on hand to supervise the big drives. In addition to being so prominently associated with the lumbering industry of the province he, in conjunction with his brother-in-law, the late O. M. Hartt, founded the Hartt Boot & Shoe Company of Fredericton. He also took an active part in reorganizing the John Palmer Company.

Business and Pleasure in Swedish Forests

Graphic Description of Triumphant Fishing Jaunt to Snurrevallen—Looking Over Timber Limit and Counting the Trees in the Whole Area

By Anton Selander, Montreal

Anton Selander, F.E., Montreal

Dear Old Place! with red painted clubhouse and white veranda. You bet we all felt good when we saw the spot of so many happy memories and fish stories.

Snurrevallen is situated in a bend of Osterdalelfven on a slope right in primeval forests of pine and spruce, with a clearing surrounding the clubhouse of about five acres.

The trail from the main road drops abruptly when entering the clearing, to a small plateau, and then from the clubhouse is another drop, down to level land, about an acre wide from the river bed, and about three acres long.

There is located the guide's house and the "Harbour."

The guides' house consisted of one large room with an open fireplace, where the guides live and do their cooking.

In the harbour were six river boats as described in my previous article. Each boat had a name: there was "Elvan," the "old man's" boat the best of the flotilla, "Svan" the boat only for guests, a very fine boat in the rapids "Stromkarlen" the boat that was selected for us boys, a very good boat, but a little heavy to pole; "Hvalfisken" that was used by our uncle, a heavy boat that could stand very rough handling, then "Necken," and "Svart" our packboats.

The "Old Man's" guide was Lindquist, he was no good except when at the oars or when using the landing net in getting the fish in the boat; our guide was James, a splendid lumberman and one of the best men in the province for estimating standing limber; then Bjorquist, also a very good bushman. As he had been a soldier he was very suitable and obedient to instructions given; then there was Per another busman and Nyhus all of whom had been in the "Old Man's" service for over twenty years.

After we had unloaded the pack-horses we began to straighten up a bit around us and so we had to look over aur fish poles and fles. When you are river fishing in Sweden you use heavy poles of hickory fourteen to sixteen feet long and a cast as long as the pole. On this cast you usually place five to six flies distributed at equal distance.

Today was the first day and although we boys wanted out at once, the "Old Man" said that there would be no fishing until next day, when we were going three miles up the river to a place called Fjatros.

Next morning we had breakfast at seven a.m. and five boats were ordered to pole up to Fjatros and wait for us there.

Anders packed down a good lunch for us all, and there was also something to wash it down with.

About eleven o'clock forenoon we started off on a winding trail through pine forest, where necer an axe had been. A mile from Snurrevallen we crossed a small creek of ice cold springwater called Husvallbacken and, of course, it had to be sampled.

After having marched along for an hour and a half, we came out on a small clearing on the shore of the river, our desination.

All the boats had already arrived and the guides had gone to sleep on the soft grasscarpet, such grass as you find only just below the perpetual snowlevel.

Loose bottoms were taken out of the boats, poles were hammered in the ground and on top was placed the boat bottoms as a table, them smaller poles on each side of the table and boards on top of them for seats and our dining room was ready.

Anders soon had lunch ready, a lunch that nobody could kick on and after lunch cigars, black coffee, and so in the boats.

The "Old Man" started out first with instructions to the rest of the flotilla to keep about half a mile apart and then to meet further down the river about six p.m.

The river is generally of the same width or about three hundred feet all along.

Took Ten Minutes To Land It

Leaving shore we come right out in a turbulent rapid named Rappaforsen. Large rocks are scattered here and there in the rapid and we achored and started to cast our flies.

Brother got the first bite and it was a nice greyling weighing five pounds. It took ten minutes to land it.

While describing brother's greyling I got one myself, not so large, but a beauty, so we were even.

Then brother had two on and landed them both, one was a greyling and the other a rainbow trout, the trout weighed about two pounds. Then he got another and I did not get a bite and as I was the oldest I told brother the place was no good and we moved.

We fished all the rapid down until we came into calmer water, with good luck.

In calmer water we never anchored but rowed crossways over the river, letting the boat slowly drift downwards and soon we reached another rapid called Longbrostet.

The "Old Man" had been teasing the fish everywhere here, so we had poor luck and we went further down stream to Getholmarna a short rapid where there used to be some excellent fishing in what is called hols.

I beat brother this time in landing three once and two twice, all good sized and all greylings.

Brother did not like it at all and insisted that I took the best side of the rver, but luck turned and after a while he caught up to me.

It was near six o'clock so we moved on and came up alongside the other boats below the rapid.

On the shore of a little bay we had some coffe and sweatbread and the "Old Man" and uncle as well as the guide mixed some cold spring water with a yellow fluid, that once had come from Scotand.

After the ceremony was over, a ceremony that was repeated every day, we spread out again and about eleven at night we all landed at Snurrevallen.

Every guide collected from his boat underneath the double bottom, the catch, put them in the landing net and disposed the nets on the shore for inspection.

The result was very satisfying, the "Old Man" had three hundred and sixty, Uncle had one hundred and fifty and we two boys had two hundred and four.

The air was very chilly and when we came up to the clubhouse, Anders had hot water, sugar, sliced lemon and French Cognac on the veranda, also a bottle of Swedish punch.

We all had a good warming up before we went in to supper which consisted of trout and greyling, boiled in butter and water with green spring onions chopped into it, eaten with boiled potatoes.

After supper we went to inspect the salting of the superfluous fish which were salted and put in kegs, trout in one and greyling in another and that ended our first day of fishing.

Next morning a council was held and it was decided to go down river, as we had heard that a party was coming up from below, fishing all the way, and wanted to be there before they arrived.

Forenoon is generally no good for fishing, but we had lots to do in changing flies and comparing the ones we had got most of the fish on, and to make the reserve casts ready for use.

We had late breakfast and after having gone over our fishing tackles started out about two p.m.

Slowly Drifting Down The Stream

We let the flotilla slowly drift down the river, until we reached the first rapid, a short one called Svanforsen, a spot where we generally used to get big fish, but not many.

It was, however, too warm and too early in the afternoon to bite good, so after having anchored twice, we moved on and came into calm water called grundfloon.

No luck at all here, so we moved on again to Calbofarsen. Here we caught a dozen nice trout (rainbow) before we moved on to another rapid called Halvarsbrostet.

This rapid is very steep and stony and the waves are very high. The guide must use great skill in handling the boat, so that it will not hang up on the rocks and trun over.

We navigated the rapid alright, and caught a few greylings and came down in a smooth running river.

On the northern shore is a clearing covered with grass and here we landed and had our dinner.

The "Old Man" did not say much about his luck until dinner was over, when he asked us to take a look under the bottom boards in his boat and so we did and saw something that made us say oh!

There in all its beauty lay a salmon of about twenty-five pounds, and so promptly had to have the story of how the fellow was caught.

The "Old Man" explained that he had felt a strain on the line and immediately the reel began to unwind with a rush until about one hundred and fifty feet of line had been let out.

Lindquist got awfully nervous and trembled all over, understanding that it was a salmon.

For the first minutes the "Moose of the Rapids" would not budge and, as the "Old Man" expected another rush momentarily and the line might not be long enough, Linquist was ordered to keep alert and not as usual let the anchor go. The "Old Man" succeeded however to wind in some seventy-five feet of line before the next rush came so there was enough line left for the salmon to waste his energy on.

The fight went on for nearly an hour, when Mr. Salmon got tired and nearly drowned, he was hawled near shore and caught in the landing net.

I understand that there was a heavy claim on the wet stuff just after the landing of that fish, but then you don't land a salmon every day on a small fly. After dinner we all separated and we boys started fishing in front of our dinner place called Bustucroken.

We got some very fine fish here and then we drifted down to Hellforsen. This rapid was carefully fished through, but the fish was not the same size as higher up.

At six o'clock p.m. we met again and the ceremony of the day before was repeated. Then we finished down Hellfloon and at ten p.m. the "Old Man" in his oat came along, poles upstream giving orders for return.

To lighten the boats as much as possible for the guides we all landed and walked back and had no trouble in finding the trail although late as sunset is, up here at this time of the summer, is not under the horizon more than fifteen minutes around twelve, midnight.

The trail however was very rough and although there is no underbrush of hardwood up here, there was quite a lot of dead fallen pine and spruce in our way.

We had six miles to go and although we walked as fast as we could it was nearly midnight when we arrived in camp and supper tasted splendidly.

Having had supper so ate we were not in bed before the early hours of the morning and consequently when we awoke it was pretty late.

As we had tried the river both up and downstream now, it was decided to use some days in looking over the limit, which the "Old Man" expected to get with the club property as soon as the crown forests were divided.

Getting the Diameter of the Log

Consequently we were divided up in two gangs and each received a calipher. Each gang also had a checker with a book in which the width of the trees were entered, and we counted trees all the day.

After us came the "Old Man," with two estimators with caliphers on thirten feet long sticks. By pushing the stick above your head and slipping the calipher over the trees you got a fairly correct idea of the diameter of the top log.

Several trees of different diameter were so measured, the size of the second and third log being guessed at, then the average was taken, and this was used as a basis for the amount of cubic feet of lumber per tree and, after deducting cost of logging and the drive, you got the value of tree and you had only to count the trees on the whole area to arrive at the value of the whole forest which is not such a complicated thing at it may seem.

We worked hard for three days and on the fourth day we had counted all of it or seventeen thousand trees.

One day when in the forest we heard in a distance the deep mellow tones of a herd horn, which is made of birch bark, six feet long and which can be heard for miles.

Up in these parts of the country, fodder is very scarce and, as there were no railways at this time, the cattle were collected from different owners in herds of from one to two hundred cows and two robust farm girls walked away to the muskegs followed by the herds who would follow them and always come at the call of the birch bark horn.

The tones of this horn are wonderfully impressive when you hear them in the stillness of these vast forests.

Every night the herds come back to the barns in what is called, fabostalles, or temporary stopping places, where cows are milked and the cream is made to butter and the milk to cheese, to be sold later on in the season.

To get fresh milk one of our guides had to go six miles from camp every morning.

Six miles above Snurrevallen a tributary empties itself in Osterdalelfven. A little above where this river empties itself is lake Sarna, a lake about three miles wide and eighteen miles long, and on the shore, at the lower end is the village Sarna, like a sapphire in emerald green, with a background of the mountain Stadjan with its top enshrouded in perpetual snow.

We had heard that the fishing was very good this year in Fjatellan and so at our usual council meeting it was decided to equip for an expedition up Fjatelfen twelve miles above its confluence.

Consequently everybody became very busy. Provisions were packed down, blankets, two tents, fishpoles, etc. and two boats were sent off with two guides in each boat, one poling in the front and the other in the back.

As the provisions and outfit were very heavy we decided to take along a horse, but as we had only a narrow trail to follow, we made a special rig for the horse on which the baggage was loaded.

The rig consisted of two thirty feet long Spruce logs, the heavy butt being reduced to necessary thickness. The butt end attached on each side of the horse like a pair of shafts, the other end trailing on the ground.

Crossways behind the horse were nailed two bars and on this the load was placed.

Came Upon Dozens of Quail

The following morning we started off and reached lake Sarna in two and a half hours march. There was a small steamboat, which we had hired and which took us up twelve miles on the lake and landed us opposite the place, where we were to start fishing in Fjatelfven.

We had now to cross over from the lake to Fjatelfven a distance of about eight miles but by very rough road. After an hour's march we came upon dozens of quail; uncle got busy with his gun and suceeded in downing six of them.

At noon we cleaned out the intestines of the birds without removing the feathers filled them with butter and parsley, then rolled them in a two inch layer of clay and threw them into the fire. After an hour and a half we took them out and with some other good things that Anders spread out we made a royal meal.

About three hours later we came down to the river about two hundred feet above where the boats were drawn up on the shore.

The tents were put up at once and the ground covered with Spruce, boughs and blankets and a few hours after a hearty supper, the camp became silent except for the roar from the rapids.

Next morning was very chilly as we were right under the snowtops, and every one was glad to get up and warm himself in front of the camp fire.

We had a heavy breakfast, and we started to get ready for a real good time. Fishpoles were put together, anchors were attached to the ropes in the boats and everything carefully inspected, and so the whole forenoon slipped away very quickly.

After lunch it was decided to fish down the river for six miles and then camp for the night. One man was sent back with the horse and the baggage was equally divided in the two boats.

One of us boys had to go in the "Old Man's" boat and the other in uncle's. Both of us wanted to go with the "Old Man" on account of his luck, so he settled it this way that I went with him the first day and brother the next.

We started fishing about five, and the trout kept us busy indeed all the time.

When we landed about 10 p.m. we found that he had a record catch and everybody was fully satisfied with the day's sport.

Next morning uncle went out with his gun for a few hours and came back with a few braces of quail and two ptarmigan.

He had seen fresh moose tracks all around and expected to see some animals at any moment; but his shots scared them away. It is forbidden to shoot moose at any time on crown forests and they watch this game very carefully.

In the afternoon we fished down the river, making an enormous catch and, after having towed the boats, passed a few waterfalls we came down to Fjatros. Looking over our catch we found that it was even bigger than that of the previous day.

We had taken two empty kegs with us, but they were now both filled with salted fish, the next night was to be in camp at Snurrevallen.

The following day we drifted down the river, anchoring here and there in the rapids and we arrived at Snurrevallen late in the evening. Counting over our catch we found that we had over fourteen hundred trout and greylings, but that they were very much smaller than in Osterdalefven.

Next day was used for repairs of rods and boats and for salting

fish. In salting fish you must remember that the fish must not be washed in water after it is cleaned. Open up the fish, take out the gills and intestines,, but don't cut off the head. Then sprinkle coarse salt all along inside the fish and lay him on his back, side by side until a row is filled. Then sprinkle some salt or sugar and salt, on top of this row and begin another row crossways over the first one, and so on until the keg is filled; then put a small board on top and on the board a heavy stone until it sinks down. Fill up the keg with fish again and put on the cover, and the fish are good for any time, many years.

To take out the salt put the fish in water, and cook as you want it. The time for breaking up was near but we wanted one more excursion, so we agreed to make another trip downstream next day.

But next day proved to be very wet so we postponed our trip for one day, and that next day proved to be ideal weather.

We left the clubhouse in the forenoon and fished down to Bustuskroken, where we had dinner, and at night we had another great fish story.

All boats had gone back to camp, but the "Old Man" did not turn up until half past twelve, and here is what he told us: "In fishing below Bustuskroken, he had seen something like a bark moving in an eddy and told his guide Lindquist that he believed the water was rising and consequently the bigger fish would come out. Coming nearer to the spot where the bark was supposed to be, he found to his astonishment that, instead of a piece of bark it was the fin of a salmon, and looking sharp at it he saw a small wound on it.

He ordered Lindquist to approach the fish and came up quite close to it. Taking a pole he rapped right over the water where the salmon stood, and that was the end of it. The salmon disappeared and he considered the incident closed. But a little further downstream they came on the same piece of bark. This time he drove the pole, end first, down in the water and succeeded in hitting the salmon right in the back. The fish turned belly up at once and was caught in the landing net. It weighed seventeen pounds."

Think we had "some" celebration on that fish. Next morning was packing day and at noon we had everything ready to start for southern parts. After dinner the packhorses were loaded. We started up the hill for the forest. At the end of the clearing we all stopped, looked back, but could say nothing.

Farewell Snurrevallen—until next year.

The Lumber Dealer and the Farmer

In recent articles in this paper, lumber dealers have been urged to do their part in promoting the best interests of their town and trade territory. One of the most insistent problems coming up in trade territories composed largely of farms is that of obtaining and maintaining an adequate supply of farm labor, says the Long-Bell Bulletin.

On many farms, unfortunately, the "unrest" among farm labor is traceable directly to the lack of suitable quarters. A farmer hires a man and gives him quarters either in his own house or in a tenant house unsuitable for occupancy. The man soon becomes dissatisfied. He has no place of his own. Particularly if he is married, he sees no opportunity ahead of being so much a part of that farm as to have a pretty home—no matter how small—and a few acres for his own use.

It is needless to go into extended argument regarding the need of tenant houses. Every lumber dealer realizes this need—or will realize it if he takes occasion to look around him at the farmers in his territory.

How many farmers in your neighborhood, Mr. Dealer, have suitable and attractive tenant houses?

Dealers experienced with farm trade know that a farmer must be shown why he needs a certain building. If you can be personal conversation, advertising and circuar letters persuade several farmers that a small tenant house of moderate cost will do much toward keeping hired labor on the farm, you will have made good headway in introducing this suggestion into your whole trade territory. No doubt you can pick out a dozen farmers who not only are able to build but are also in need of a house for hired hands. There are many arguments you could bring to bear on these twelve farmers to pave the way for your campaign on tenant houses. Newspaper advertising would help, personal letters woud give you a medium for putting your arguments right into the farmers' hands, and seeing them personally would develop your campaign still further.

The dealers interested in making some headway in their own trade territories along the lines suggested, and desiring further information on this subject, may have the benefit of some concrete suggestions we have to make, by writing the Advertising Department. This service is, of course, free and dealers really interested in promoting the building of tenant houses may be sure of co-operation from the advertising department by writing a letter to us.

The Salesman—Missionary to the Trade

A Salesman occupies a peculiarly important position in the organization. He is the conveyor as between production and the market, the connection between cost and selling prices; and as the degree of his efficiency, so will be the degree of profits—all else being equal, says the "Log of Long Bell" He is the missonary of his industry; an educator of his trade. The industry looks to him to carry the work of its product to the buying world; it looks to him to create a confidence in its product and a demand for it, and then to secure a price equal or better than competition in its class. It looks to him to assist in establishing and maintaining a reputation as a producer of goods of quality. He is one of its most important advertising mediums. It looks to him to overcome undue prejudice, and to climinate unjust claims; to act in the capacity of a judge in the matter of credit worth and risk, and to collect or assist in the collection of slow accounts. It expects the salesman to have confidence in himself and in its product.

From the viewpoint of the customer, the salesman is the representative of supply and its cost. It is the salesman who brings to the buying world word of the condition of supply and the extent of demand. He is looked to as the conveyor of information as to the condition of the market in his territory. And if he be the right kind of salesman—the one who gets close to his trade—his advice and counsel will be sought as to the time to buy, and the quantity. His judgment will have weight in guarding against an over-stock and in preventing a supply detrimentally inferior to the demand. He will be an educator to his trade of the merits of the product he sells; will inform of its various uses, and suggest new fields for its consumption. He will propagate his particular brand of products over all competition, and be prepared with facts and figures to substantiate his contention.

So, as it stands between the Manufacturer and the Salesman, and as between the Salesman and his trade:

Confidence creates co-operation; and the right kind of confidence begets the right kind of co-operation.

The Manufacturer who does not place every confidence in his salesman should not expect the salesman in turn to have full and complete confidence in him. Neither should he expect him to be able to influence his trade to a full confidence in the article produced, nor in the manufacturer, nor in the salesman himself. He should not expect confidence and representation from the salesman if he hold that salesman in a position which lacks the possibilities of efficient representation, and is indicative of or lacking in ability to create confidence. If he would have his salesman gain the confidence of his trade and strongly represent him in his appointed field, individuality of position will be the key to a successful realization of that objective.

A position lacking in indviduality does not command the full co-operation of the co-workers. The trade also senses it, perhaps unconsciously, and as unconsciously it has its detrimental effect. They sense the lack of confidence placed in him by those he represents, and they, in turn, refuse their confidence. His power of influence is abrogated or to a great extent destroyed. And not only does the representatives suffer in consequence, but the represented as well.

A manufacturer will pay out thousands of dollars in advertising; he will name his wares before the public so that "he who runs may read;" and yet, in too many instances, he will hide the light of his most brilliant medium of advertising under a bushel—he refuses sufficient publicity (Individuality of Position) to his salesman.

If the manufacturer would secure to his representative the open door of confidence, let him place him in a position of individuality, have confidence in him, advertise him, that he in turn may create confidence in the manufacturer and his products among his trade, and that he may advertise those products to a position a step or two above competition. Let the manufacturer place the salesman to himself, and have the trade refer to him alone their requirements. Let him supply the salesman with the necessary assistants; give him his territory and let him alone sell that territory. The confidence placed in the salesman by the manufacturer and the salesman's own personality count with the trade. Advertise those qualities. A brand will represent quality, but it takes a salesman to sell the brand. Advertise him.

An Aggressive Lumber Salesman

John Hall, Toronto, Ont.

John Hall, 160 Huron St., Toronto, who represents the W. M. Ritter Lumber Co., Columbus, Ohio, is widely known to the Canadian consumers of hardwood. He has been with the firm for nine years, calling upon the wholesale and retail trade, manufacturers and others. The W. M. Ritter Lumber Co. recently joined the Wholesale Lumber Dealers' Association.

Mr. Hall was present at the last meeting, being accorded a hearty reception. Born in West Virginia, he spent his boyhood days in Richmond and his first job was as tally-boy with the Deverex Lumber Co. of Charleston, W. Va., with whom he remained seven years, serving in various capacities which gave him a practical, all-round knowledge of the lumber game. He then went into business for himself, which he followed for some four or five years previous to becoming associated with Mr. Ritter. Mr. Hall has had twenty-one years' insight in the lumber line and remembers Mr. Ritter when that gentleman started out with one mule and a truck drawing out logs for a little circular mill. To-day the Ritter Lumber Co. own and operate thirteen band mills with an annual capacity of 130,000,000 feet, six planing mills and eleven flooring units. Mr. Hall, their Canadian representative, handles oak of all kinds, poplar, chestnut, cypress, birch, beech, basswood, buckeye and yellow pine.

Lumberman Does Not Lose Good Name

The victim in 1913 of what Justice Middleton, of Toronto, describes as "a series of financial reverses comparable only to the business disasters of the patriarch Job," Charles Pedwell, of Lion's Head, Bruce county, sawmiller and lumberman, had been in 1912 abundantly solvent, worth $75,000, according to his own estimate, and $25,000, according to his banker's. He struggled along for six years as one "whom unmerciful disaster followed fast and followed faster." In 1919 he was hopelessly insolvent, and on November 21st, 1919, assigned to Osler Wade, of Toronto, for the benefit of his creditors.

In July, 1912, in the days of his prosperity, Mr. Pedwell had given his wife certain property for an expressed consideration of $9,800. She had granted him the right, on the same day as the gift, to cut timber on the land for twenty years. This right he mortgaged with his bank to secure the ready money, $9,800, which he required to close a contract for the purchase of a valuable timber property in which he was associated with a man named Tackaberry. The gift to his wife was part of a plan to raise the necessary funds. The bank not being able to advance money on the land, the bank and the bank's lawyers devised this scheme to circumvent the provisions of the Bank Act.

In the days of Mr. Pedwell's adversity his former business associate and friend instigated legal action which the assignee had not desired to take. The action attacked the gift of these lands to Mrs. Pedwell, who has since died, as being fraudulent and void as against Mr. Pedwell's creditors. Mr. Justice Middleton, Toronto, recently gave judgment dismissing the action with costs, pointing out that the property given to the wife was but an insignificant fraction of Mr. Pedwell's wealth in 1912, holding that there was an effective gift of the property, and that there was nothing further from Mr. Pedwell's mind than to defeat or defraud his creditors.

Mrs. Pedwell died intestate in 1915. Mr. Pedwell's share of the property has passed to his assignee for the benefit of his creditors. It was the share which would pass to her six children which Mr. Pedwell's creditors have vainly attempted to seize.

Comprehensive Review of Lumber Operations

A general survey of conditions in the lumber industry in Canada is given in the last issue of the Labor Gazette, Ottawa, which says: Labor was generally reported scarce during October in the lumber camps in the Maritime provinces, Quebec and Ontario. Charlottetown reported quiet conditions in the industry. The saw and shingle mills at St. John and Fredericton were still running. Bathurst reported the demand for men to be less than last year, and the camps were beginning to fill. In Quebec district the sawmills were actively engaged in finishing their season's cuts. The mills at Sherbrooke were fairly active and the logging, tie and other surrounding camps were busy. At St. John's and Iberville sawmill workers were still employed. One sawmill at Ottawa and Hull closed during the month; some improvement was reported before the month closed in the water power situation. Peterborough reported the lumber camps very active and taking on all available men; the saw and shingle mills continued busy. A strong demand for loggers was reported from Timmins, Pembroke, North Bay and Cobalt. The saw and shingle mills at Owen sound were still active. Sault Ste. Marie, Port Arthur and Fort William reported a shortage of men for the woods. A demand for bushmen for the prairie provinces was reported from Winnipeg, Regina, Edmonton and other employment centres, the fine weather tending to keep many men working on the farms. A considerable curtailment of production was reported in the lumber industry of British Columbia. At Fernie the lumbering industry was reported rather quiet owing, it was said, to the unsettled condition of the prairie and American markets, the new freight rate increase and unsettled labor conditions; the closing of some mills and the return of laborers from the prairies reduced the previous labor shortage; the pole and tie branch was also rather quiet. The lumbering industry was very slack at Nelson and Trail, many mills closing down; some, it was said, because of a shortage of cars, and some because of low prices or high railway rates. Some demand for loggers was reported from Kamloops and Vernon. Vancouver reported that a number of camps closed down towards the end of the month, and saw and shingle mills less active; tie makers and piece workers on poles and posts were in demand for interior points on the Grand Trunk Pacific Railway. At New Westminster several lumber mills were already curtailing operations owing to the unsatisfactory state of the market or shortage of cars, and one mill closed down, throwing about 170 men out of work. Prince Rupert reported most of the lumber camps as still busy, but a few of the smaller camps closed for the winter; the tie camps along the G. T. R. Railways were opening up. Victoria and Nanaimo reported some decline on Vancouver Island from the activity of the past months, several mills ceasing operations on account, it was said, of the dull market and high freight rates.

Bargain Lumber Sale Advt. Did Not Pull

Is there such a thing as "bargain lumber" from the retailer's standpoint and how far would a special publicity campaign, proclaiming cut prices or a sacrifice sale be successful?

A well-known retail lumberman in Manitoba city, got a chance to buy several carloads of lumber at a very low price and thought he could clear up money on the deal by some catchy advertising, the same as is often presented in the announcements of dry goods stores, shoe merchants, clothing houses and others. Here is the way he relates his experience:—

> "We appreciate that coming out in the paper with a splashy price in lumber is a unique proposition, but from our experience we are inclined to think that this is our first and last effort in that direction. We had in mind trying to dispose of about $10,000 worth of stock, but our effort proved anything but satisfactory. In our opinion, lumber purchasers are no different from the general public and seem to think that when there is a drop, it is time to stay out of the market as this is only a starter. We think that was the case here.
>
> "We are extremely sorry that we cannot give you a better report than this as we would have liked to have had the lumber move, especially when we can buy it at about $10.00 per M. less to-day. While we favor newspaper publicity and straight-forward business talks on stock, service, delivery, building prospects, etc., for the retail lumberman, we cannot endorse, with any degree of assurance, a bargain campaign, a cut-rate move or a sacrifice sale, the same as merchants in other lines advertise and get away with successfully. In our little excursion into this arena we, as lumbermen, have to report a reverse, much as we would like to record a success."

Canadian Trees Over Brave Canadians

Hon. Honore Mercier, Minister of Lands and Forests, has had shipped five thousand maple and elm trees to the forest service in Belgium, through the channel of the Quebec Government agent, Mr. Godfroi Langlais, at Brussels. These trees are sent by Mr. Mercier, who asks that, as they were grown in the Quebec Province nursery, situated at Berthierville, P. Q., they be planted in the grave centers of France and Flanders, where the Canadian soldiers who fought and died during the great war, were buried. This will, no doubt, give consolation to the parents and families of those brave soldiers who made the supreme sacrifice for the allied cause and Christian civilization. It will be at the same time please the families and Canadian people in general, to know that the boys sleep within the shadow of trees grown in Canada, their home.

Pulpwood and Its Varied Activities

Why Pulpwood is Worth the Money

Writing the "Canada Lumberman" a leading eastern pulpwood concern says: The pulpwood situation is very much mixed at present and we scarcely know where we stand. It is true that American mills are just at the present staying out of the market, but we anticipate that they will all be back together with the result that the price will be maintained.

It is hard to say whether or not there has been an over-production of pulpwood, but it is quite apparent that many dealers are willing to accept much more reasonable prices than they have been receiving during the past fall and summer. Prices on pulpwood were no doubt inflated by the demand for spot wood that existed during the summer and fall months, and it looks now as if quotations may go back to where they were last spring, of a delivered basis somewhere around thirty-three dollars Watertown.

As far as we are concerned we are not purchasing at the present time, but reports of any sales made would give us the impression that perhaps prices have fallen about five dollars per cord below the recent high level, making a figure of about twenty-five dollars f.o.b. cars Quebec Central to the shipper on the most favorable freight rate. This price would, of course, be reduced by additional freight rate from more isolated points of shipment. These prices are quoted on sap-peeled spruce and balsam pulpwood.

Quite a quantity of rossed wood was made this fall, and quite a few lumbermen anticipate putting their logs into pulpwood this winter, but we are inclined to think this will be discouraged on account of the present low market. We are of the opinion that there is sufficient pulpwood for the 1921 requirements, and for this reason are discouraging further manufacture of either rossed or rough pulpwood for the market, asking our shippers to concentrate on making sap-peeled pulpwood in the spring of next year for the 1922 market.

The present facts in the pulpwood situation that must be taken into consideration constitute good argument for this country against the Underwood resolution, in that, by paying good prices for pulpwood there is no question that a sufficient output can be obtained tc take care of all the requirements of both the Canadian and American mills. Heretofore before the war, our farmers practically got nothing for their stumpage, selling their pulpwood for about the labor cost that was put into it at a small margin of profit. Our people should wake up to the fact that their stumpage is a valuable asset, and as it is something that cannot be reproduced in this generation they should demand a reasonable price for it.

There is not much demand for other kinds of pulpwood outside of spruce and balsam, and when pulpwood is made from hemlock or jack pine it is rather difficult to dispose of, there being very few mills who can use this product.

Equipping New Rossing Plant at Bancroft

"The Hydro Electric Power Commission of Ontario who operate a pulp and paper mill at Campbellford, Ont., are putting in a rossing plant at Bancroft, Ont., from which place most of their wood is procured. Previous to this they simply had the logs cut into 2 ft. wood and loaded on cars for shipment to Campbellford where it was barked on disc barkers, but now they intend to cut up the logs and bark them right at Bancroft. For this purpose they have recently placed orders with the William Hamilton Company of Peterboro for complete barking outfit, including three strand log haul-up, eight saw pulpwood slasher cutting the wood into 2 ft. lengths, and also an 8'x30' barking drum on rollers, together with the necessary conveyors and transmission machinery. The power will be supplied by two (2) 66"x16' boilers, and 20"x24" engine. This equipment will greatly increase the supply of barked wood for their pulp mill, and it is expected that they will be able to ship from six to eight cars of barked wood every day. The foundations for the machinery have already been laid, and it is expected that they will be ready to commence operations around the 1st. of May."

Pulp Industry Wants New Research Building

The Canadian Pulp and Paper Association is supporting a proposal to obtain legislative authority to establish in Ottawa, and under Government support and direction a national institution which is to combine a bureau of standards and an institute of scientific research and which shall be available to every Canadian industry. The bill to be introduced will provide for a free grant of land and an appropriation of $500,000 with which to erect a building and inaugurate the work. Once established it is proposed to make the institute self-supporting through the co-operation of individual manufacturers and groups of manufacturers who may desire to make use of its facilities. Such industries as desire, furthermore, will be furnished opportunities to install their own facilities and employ their own staffs for carrying on work of any specialized character, all under the general supervision and guidance of the institute's executive staff. It is proposed to make the institute independent of the Civil Service Commission in order that appointments to its staff may not be subjected to the salary limitations ordinarily placed upon public servants in Canada and which would otherwise prevent the employment of highly-trained, skilled experts such as would be necessary to make the institute of real service.

A committee of technical experts of the pulp and paper have reported to the association in favor of hearty co-operation with the council. It is proposed that the industry shall engage its own technical director and staff and equip and maintain its own laboratory, in conjunction with the general government plan. Among the proposed objects of research in such a laboratory would be: Determining the output of fiber extractable from different wood species by the various processes employed; development of by-products such as alcohol from waste sulphite liquor; studying the effect of fungi in wood; developing means for the utilization of hardwoods in making pulp, and the study of many other problems confronting the industry. The new institute would probably, among other things, absorb the forest products laboratory, now carried on by the Government in connection with McGill University.

Good Progress on New Plants

It is understood that construction is going ahead satisfactorily in the case of mills being erected at the head of Lake Superior. The Kaministiquia Pulp & Paper Co. is pushing work at Port Arthur, and expects to be producing thirty tons of ground wood by the end of the month. It is expected that a newsprint mill will be added later on. The Fort William Paper Co. is also making good progress in its undertaking and hopes to reach the production stage in the early spring. Progress was recently handicapped by the lack of carpenters, but this defect has now been overcome.

Discussing the future of the industry, a leading authority stated recently that the Canadian pulp and paper industry had naturally received adverse comments of late from the heavy declines of many pulp and paper stocks in the market, but, the losses were in the speculative stocks and the change did not affect all the companies, and, after all, the biggest decline might, from speculative reasons, have taken place in the case of companies which were most firmly established and highest in earning power. Canadian paper companies would have an advantage for some time because of the lower cost of production through proximity to raw materials, while at the same time having the advantage of the price being fixed in the United States market, where production costs were higher. At present, the United States fixes the price, as it still has a larger production of paper. In a few years, however, that condition might change, and the price be fixed in Canada, when the production here exceeds the production across the line. The region at the head of Lake Superior seemed well suited to the paper industry, because of the large consumption in the middle Western States, and because of the great quantities of wood available, much of it from territory that had been previously cut over by lumbermen.

The Future of Pulp, Paper and Timberlands

By Frank J. D. Barnjum, Annapolis Royal, N. S.

No one should be deceived by the present lull in business in so far as pulp and paper are concerned, as this particular line is in a class by itself and any decline in price will be very transitory as this industry differs from any other, owing to the short supply of wood, its raw material, which will be the price controlling factor for the future.

There are so many paper companies who own either no lands at all or very small holdings who will be forced out of business on that account, that there will be a continued shortage of pulp and paper from the time business once takes its normal stride, which in all probability will be not later than next March.

The foregoing statements apply with equal force to the lumber situation, and as soon as building begins next spring prices for lumber will be higher than have yet obtained.

Within two years timber lands will be selling in the State of

Maine, for instance, for fifty dollars per acre. I am willing to stake my reputation on this, and I shall leave it to my friends to state whether or not my predictions in the past in connection with timber lands have been correct.

When one considers that land in Maine has already sold for thirty dollars and more per acre, and stumpage contracts have already been made at prices running up to nine dollars and fifty cents per cord, it is not a very far cry to fifty-dollar land and thirteen-dollar stumpage.

Within two years there will be little, if any, wood going out of Canada, and I shall leave the reader to imagine what will happen when this annual supply of a million and a half cords is no longer available to the American mills.

This will be simply a case of self preservation on the part of Canada, as her own mills have absolutely no wood to spare. The Province of Quebec has already been forced to notify her large limit-holders that they must reduce the cut on their Crown Lands one-half. This will necessitate the purchasing by the Canadian mills of all fee-land wood which has been going across the line; otherwise they will be prematurely forced out of business themselves.

Personally, I will not sell an acre of land, a cord of stumpage, or a cord of wood at any price. This is the advice which I have given all of my friends for the past year. I am not cutting a cord of wood on my holdings, but am buying wood and stumpage, and have stocked my mills for the coming year in this way.

The facts above stated are all indicative of our only too short timber supply, and further emphasize the necessity of practicing greater conservation.

A word further to the paper mills. Don't be deceived by a present supply of wood in the mill yard and at the railroad sidings, as every cord of extra wood cut this year means a cord less standing.

In the wood we are now cutting we are simply robbing our children.

The present accumulation of cut pulp wood has been brought about by the four following causes:

1. A temporary recession in business during the readjustment period, which was bound to come.

2. The increase in price for wood, which helped to pay for the longer haul, as much of the wood that has been cut recently is from the very back end of many of four timber lots.

3. An attempt on the part of land owners in the bud worm killed area to salvage at least a small portion of the bug killed timber.

4. The fact that lumber has temporarily dropped in price, owing to the delay in building, causing a diversion of logs from lumber to pulp wood.

The great trouble with the paper companies is that they are always living in the present, forgetting the past when at times they have already known where the next carload of wood was to come from, and disregarding the larger and more permanent shortage of the future.

The latest reports which I have received from cruisers in New Brunswick now raise the amount of loss in the standing wood supply of that Province from the recent attack of the bud worm to approximately fifty per cent., so when you look at the present wood pile don't lose sight of any of the above facts.

It is far better to look this situation squarely in the face and endeavor by every means at our command to prepare for the future. Therefore, anything that can be said or done which will tend to arouse the public to a realization of the danger that is confronting us with regard to our future timber supply is a public work of the first importance.

Frank J. D. Barnjum.

Annapolis Royal, Nova Scotia.
November 27, 1920.

Tractors to Haul Wood on Ice

Due to the freezing of the river north of Grand Piles, 1,000 cords of hardwood belonging to Laurentide that were cut near the Manigance Rapids during the late summer are still in the woods. An experiment is to be made shortly with a few loads of the wood which will be brought to the mill by the tractors which are at the Proulx nursery of the Forestry Department. If the cost of bringing in the hardwood over the ice by means of the tractors is not too expensive, it is likely that much of the wood will be brought in during the winter. The hardwood, it will be recalled, is to be used for the manufacture of groundwood pulp, experiments having shown that certain varieties of hardwood may be used advantageously.

The salesman who does the talking himself, may be all right, and may get the business. But look out for the fellow who gets you to talking. He'll sell you, sure as fate.

New Industrial City Will Spring Up

A new city, whose name, Saguenay City, is already incorporated, is to be built, beginning next spring, near Kenogami, Lake St. John county, by the Price Brothers & Co. This firm intends to establish there a very large pulp and paper plant. The contractors say they will need at least 4,000 men next spring.

Lumber is Bound to Bring Good Price

Writing to a prominent Ontario wholesaler a leading Eastern man thus sizes up the lumber situation, present and prospective:—

"We all realize that deflation in many commodities that have been artificially manipulated and driven much beyond their value, is necessary and has got to come. For instance, sugar, coffee, tea, rice and many other lines that there were tremendous stores of in the Orient and were left there to accumulate for at least three years owing to the impossibility of getting shipping to move it. Java in particular was at its wits ends to find storage for many of the above commodities. Where an artificial shortage has been created, naturally, when these came on the market it brought a tremendous slump in many of them, possibly carrying things further than there was any need of, through tightness of money, high exchange, and the natural tendency of the individual who had carried things away beyond their value to throw on the market regardless of results once it seemed to be going against him.

"The lumber situation is entirely different. The world's production of lumber for several years has been under normal, and produced at a tremendously increased cost. The increased prices until this year, in the opinion of many, did not meet the increased cost of production, and I think you will find that with the wage reduction in labor that is being brought about by unemployment in many of the trades, a tremendously increased building programme is going to be brought about in the coming year.

"They are in bad shape on the Continent. A shortage of houses, and practically the only competition that this continent has, has been from Sweden these last few years. Russia was a large producer of lumber and, to a great extent, our prices for export were determined by their cost of laying down in France, or the British Isles. They have not been a factor for several years and, under the conditions now existing and likely to exist for some time, are not likely to be a factor for at least two or three years' time, many think five. The bulk then has got to be produced on this continent, and from the present outlook, we are going to have the smallest lumber production in 1921 that we have had in many years.

You speak of spruce prices. I will venture to assert that in the provinces of Quebec and New Brunswick in the coming year, there will not be made over forty-five to fifty per cent. of the normal production. The pulp and paper producers are the governing factors for wages in the woods now, and have been for approximately the last three years. Practically all of them, with the exception of a very odd one, are short of pulp at the present time and are paying prices, and are willing to pay more if necessary, in order to get the stock. The prices being paid at many points east of Montreal, and I know whereof I speak, equal $60.00 per M. or better in the log for the small sizes. You will find that many of the smaller mills will not produce spruce this winter, nor in the coming summer. I know of several instances where mills normally making from 500,000 to 2,000,000 feet, will not produce any in this coming year, and have made contracts for rossed wood for they can make more money in this way than by putting it into lumber.

"If this is the case, and with the tremendously increased building programme which nine out of ten admit has got to come, through easier money—and money is going to be a lot easier and cheaper after the New Year—and with more competition for work, more efficiency in the trades, and labor, lumber prices are not going to be considered very much in the aggregate, for on the average contract lumber is not a factor to exceed 17-18 per cent. of the total cost.

"There is a great variance of opinions on these matters, and I love to discuss them with the man who is prepared to cross swords, so to speak.. What we want to-day is vision, well balasted, and nerve. Everything is going to be right, and I believe with the turn of the year, or shortly after it, we are going to have a number of very prosperous years ahead of us."

Western Mills are Ready to Meet the Demand

"Seller Knows That There is Not a Chance of Prices Going Lower as Present Quotations are Not on Legitimate Basis Relative to Cost of Production"

When lumber inquiries get beyond the curiosity stage, and crystallize into real-honest-to-goodness orders, the purchasers will find on the part of British Columbia lumber producers a readiness to serve, amounting to alacrity. They will also find a spirit of co-operation with respect to securing the best material for any particular order, and a desire to foster the re-awakening trade by every means in their power. One means will be the modest price basis which will continue to prevail, by all appearances, for some time to come.

Another very valuable means will be in the assurance of being able to supply promptly stocks to almost any specification, says the Vancouver correspondent of the "Canada Lumberman." Of that there can be no question, for the stocks exist in the hands of the producers, and are fully up to normal, and very far beyond any prospective demands so far in evidence.

It is somewhat difficult to get real statistics of lumber stocks on hand at any definite date. The practice of the mills in the Coast association is to report an estimate quarterly and an exact figure, as near as obtainable, from actual inventory at the end of each year. The Mountain association mills are in a somewhat different position, as so many of them close down at the beginning of the winter season. Their stocks at that time can be very closely figured, especially in a year like this when the outgoing orders are reduced to very small compass.

Capacity to Deliver the Goods.

Some idea of the stocks on hand this year in comparison with other recent years can be gathered from a few figures secured from official sources in the two British Columbia associations. These figures show that there is nothing alarming in the present situation, with so many mills shut down and the log production dropping to zero. The fact is that it would afford the lumber manufacturers of the province of British Columbia the extremest pleasure to have their capacity to "deliver the goods" put to the utmost test. They are not in the least likely to have that strain put upon them for a few months at least, but whenever they do, they will demonstrate their ability to take on all comers at any specifications and at almost any notice, car service being about the only thing that might put a bar on their activities.

As to actual stocks in sight in the mill yards of the Coast and Interior, here are some figures which will serve at least as a guide in forming an opinion on the capability of the mills to make deliveries:

The mills in the B. C. Lumber & Shingle Manufacturers' Association—the Coast mills—had on hand at Sept. 30, 1920,—two months ago, 147,000,000 feet of lumber. September 30, 1919, the total was 168,000,000 feet; December 31, 1919, the inventory total reported (final figures) was 163,000,000 feet. The Mountain Lumber Manufacturers' Association mills had stock on hand at September 30, in the past five years, as follows: 1916, 103,000,000 feet; 1917, 8,000,000 feet; 1918, 154,000,000 feet; 1919, 111,000,000 feet; 1920, 154,000,000 feet.

From the above figures, it is seen at once that the situation at the present time is that stocks of lumber now in the hands of the manufacturers are well up to normal. In the case of the Mountain mills the present stocks are greater than those of a year ago. The Coast mills have somewhat less than at Sept. 30 last year, and than at the end of the year, but the amount is not enough less to make any serious difference in the lumber situation. That the latest available figures are for Sept. 30 of this year is not an important matter either, for the very good reason that any selling done in the past two months will be found to have been more than offset by the lumber cut in the same period. That the Coast mills in particular have been cutting more than they have been selling since Sept. 30, is not disputed by any one—it is too well known. Of course in the past few weeks that condition has been in course of correction, for the mills have been curtailing their output, and more mills have been shutting down. Practically all Mountain mills are down, and most of them cut their season shorter than usual, simply because of the dull market. The cut in the Mountain districts will be greater this year than last, though shipments have been considerably less.

Mills Are Ready to Meet Demand.

Should there be a revival in demand—either steady or sudden—the mills of British Columbia would be ready to meet it. The situation is shortly, that all interior mills are closed, many coast mills have closed or are closing, those still running are reducing their output, and in the main are working on orders, such as the railway tie export orders still unfinished. The coast logging camps are almost all closed down or closing. The mills of the interior, which nearly all do their own logging, are getting out some logs, but the majority of them will not get out many this winter unless there is much better prospect for business next season.

One might be led to think that with all this closing down a sudden awakening of the market would find the manufacturers unprepared to cope with it. But so far as the mills are concerned, most of them are utilizing the shut-down to put their plants in repair and refit them generally. The logging camps could start up at short notice if there was a demand for logs. The labor situation is not likely to cause any difficulty. With the Government Employment Bureau sending out distress signals to other parts of the Dominion warning all men seeking employment to stay away from British Columbia, there is no fear of dearth of labor for logging camp or sawmill, should they all start at once.

Unemployment is on the increase in British Columbia centres at the present time, with very little prospect of relief. The only possible source of employment is that which might offer if real and not feigned activity were to start on sundry projected public works, for which the Ottawa Government has let a number of contracts. Among these are the Ballantyne pier and the big dry-dock at Vancouver. Of minor possibilities are the improvements to the Canadian Northern Terminals at False Creek, Vancouver. All of these, and others, would afford employment for a good many men, but it is rather more than suspected that the men in authority are "swinging the lead" on all of these propositions, whatever the reasons may be behind the delays. The only work in sight for the several thousand out-of-works who have reported in coast cities, is a small amount of street work and road work started by the city of Vancouver and the provincial government. Most of the logging camp employees have by now drifted to the cities and could not get work if they tried.

No Chance of Any Lower Prices.

So far as the market is concerned, the lumbermen are a unit on the question of taking on future business and dating it forward at present day prices. While nearly all would be ready to discuss real orders and to quote present current prices, none would commit themselves to giving those prices for orders dated, say three months hence. It is a fair summary of the situation to say that lumber sellers are not a bit more anxious to sell on present basis than buyers are to buy. Possibly the sellers are less willing to do business than the buyers.

The seller knows that there is not a chance in the world of prices going lower, as present quotations are not on a legitimate basis relative to cost of production. Even if some elements of cost were to be reduced, it would only have the effect of putting future production more nearly on a parity with cost of production, should present selling figures stand. Stocks now in hand were not produced at a cost that shows a profit when disposed of at present current rates.

Decking logs—An operation on the Pearce Company's limits near Marmora

Use of Tractors in Woods Operations

Lighter Machines are the Best and Will Play Important Part in Lumber and Log Hauling

There appeared recently a photographic illustration showing a ten-ton caterpillar tractor with four loaded eight-wheel log wagons trailing behind it. Underneath it was this line: "Ten-ton tractors are now able to pull thirty-ton loads over our dirt highways."

For some time now there has been keen interest on the part of both millmen and tractor makers in the subject of tractors in the woods, especially in the lowland logging woods for logging operations. Many experiments are being tried. Some are proving disappointing, some show that mistakes have been made, some demonstrate remarkable possibilities, and gradually we are getting at some understanding of the possible future, nature and extent of the usefulness of the tractor in the logging woods.

A friend of the writer has had a ten-ton tractor in some logging operations in the hardwood belt of Louisiana quite a while now, and the picture referred to was so suggestive of this instance that following its appearance, the owner of the tractor in question was interviewed as to how it was getting along aand as to whether he thought tractors were to replace short line logging roads, or whether their mission would be more to replace horses, mules and cattle in logging.

The Main Trouble

First he told of some troubles he had had with the tractor. It is a ten-ton caterpillar, one of those "tanks" made famous by the war, and he said he thought he had made a mistake in the size; that a five-ton would have been better. He said the ten-ton tractor would pull thirty tons with proper trailers behind it, in fact it would pull anything that would hitch onto it, but that was not the trouble. The trouble happened to the things it was pulling. In the logging woods, if the wheels of a wagon mired down, or if it stuck a stump or something, the tractor would march right ahead and often the wagon would be torn to pieces. That, he said was the main trouble, hitting obstructions in the woods with the wagons. He figures that a smaller tractor, with only one or two wagons trailing behind, will give better results in logging operations proper.

He figured, however, that with a larger size good service can be had in short hauls over good dirt roads to the railway; that is, a ten-ton tractor with a proper equipment can be made to haul a carload at a time, of lumber or similar products, and in many instances it will solve the hauling problem from mills in the woods to the railroad.

Great Service Possibilities

From his experience he was very emphatically of the opinion that the tractor will not, to any extent, replace logging railroads. He does think, however, it will, to a great extent, replace horses, mules and oxen and in this respect will render great services. He thinks for the woods operations the lighter machines will be better, and for all tractor work. whether hauling logs or hauling the lumber to the railroad, the tractor wagons should be specifically designed for tractor work. The great trouble with hitching the ordinary wagon behind the tractor is in tearing up the wagons and pulling them to pieces when they hit some obstruction.

The indications are that tractors and trucks will both play an important part in log and lumber hauling from now on. The caterpillar type of tractor especially offers advantages in the lowlands for logging operations. Both trucks and tractors should do much to help solve the problem of hauling from country points to railroads.

It will take some time to develop proper roads in some instances, and from experimenting we will have to learn the types of tractor best adapted to a given service or kind of ground, but during the next year or two, we should be able to develop from the experimental into the readily practical and successful use of tractors on a larger scale in woods operations.—J. Crow Taylor in "Lumber."

How Service is Taking Hold To-Day

If we were asked what great idea and ideal had taken hold of the minds and hearts of men in the last ten years to a greater extent than ever before in the world's history, we would immediately answer, "The idea of service."

We hear and see more of "Service" in a religious, a social and a scientific way than ever before. We have seen in the past five or six years the spectacle of men giving up their time and talent without thought of remuneration that whole nations of people, thousands of miles away, might be clothed and fed. We have seen scientific men giving their lives perhaps to save some suffering people from the ravages of disease. We have seen millions of men die for a cause, often the cause of others than themselves, and we have all been called upon to give our time and money to an extent we would not have dreamed possible six years aago.

We have learned to think in terms of the other fellow's interest as well as our own—in fact, to realize that our own welfare is but a frail and unsafe structure if it does not take into consideration the welfare of others; that it isn't mere moralizing to say "That no man liveth to himself.' This is an actual fact that anyone who reads the signs of the times can see for himself. Our national ideals will affect the national ideals of the world, our ethical ideals will affect the ethical ideals of the world and our industrial ideals will affect the industrial ideals of the world. Whether we wish it or not, this is true. We cannot evade the actuality of it and it would seem that our national and ethical ideals are to be tried out in the crucible of our industrial life. In the final analysis from a great nation down to a small business organization, simmer down to the character and convictions of the individuals who go to make it up. It is like these composite pictures where we see a blending of the individual traits. A business organization can rise no higher than the ideals of the men who make it, and to be the greatest benefit to itself and others a broad conception of "service" must reach each individual employed. A home, a business or a nation cannot continue to exist where the individual is determined to get as much as he can for as little as he can possibly give. Each one must be brought to realize that there is an ethical as well as a material value attached to work well done and it is doubtful if anyone ever helped to build a material success for himself or anyone else without first coming to realize the truth of this statement..

We are living in perilous times, when the very foundations of our world seem insecure; when the institutions we have been reared to think unshakeable would seem to tremble. How shall we individuals meet these new conditions? Our greatest problem today is an economic one and only by greater "Service" can we cope with it—a giving of more—more energy, more time, more thought and more loyalty; and the measure of our "Service" will be the measure of our success.—R. F. Morse in the "Log of Long-Bell."

Prospects Bright in Equipment Line

Fisher & Davis Mfg. Co., of St. Louis, Mo., report that the prospects for the coming year in the line of sawmill machinery, etc., are exceptionally bright. They say that the past ten months have seen the greatest call that they have ever experienced, and that in the majority of the equipment they could not promise a better delivery than four months. A deided slump in the lumber business occurred during July and August and at the present time there is practically no demand for lumber of any kind, due principally to the almost complete cessation of building. The company do not expect any increase in demand for lumber during the remainder of this year, but as there are practically no big stocks on hand, with the exception of a few of the largest southern mills, there is almost certain to be a brisk requisition for all lumber in the early part of 1921.

Reforestation Plans in York County

York county is preparing to go into reforestation on a large scale. Recently the committee in charge of reforestation plans, headed by Reeve Geo. B. Padget of Markham, waited on the Ontario Government, and succeeded in getting a promise of assistance. The county will have to buy the land, but the Government has promised to plant it and look after the trees for forty years, when it will turn it back to the county. To what extent reforestation work will be done will be decided later by the county council.

Urges Buyers to Take Housing Bonds

Dr. Copeland, New York City Commissioner of Health, says that something must be done and done quickly in New York City to relieve the housing situation which is intensely acute. He states that New York City health laws are being winked at by the Health Department itself, in many cases, to avoid putting in the streets thousands of tenants who are overcrowding apartments and other buildings.

Before the Senate Committee on Reconstruction and Production Dr. Copeland approved the British plan of stimulating building by selling "housing bonds" guaranteed not only by municipalities but also by the government. He suggests that buyers be urged to take the housing bonds "in the name of civilization".

Many friends of J. L. Apedaile, managing director of Price Bros. & Co., of Quebec will extend sympathy in the death of his daughter, Miss S. Apedaile, who was fourteen years old and had been ill for some months. Besides her parents one brother and two sisters remain.

Chase rainbows—and you see no dollars. Chase dollars—and you see no rainbows. Moral—try a little of both.

What Canada is Doing in Pulp Line

A. L. Dawe, Montreal

What the pulp and paper industry means to Canada and her future development was emphasized in a recent instructive address delivered by A. L. Dawe, of Montreal, secretary of the Canadian Pulp and Paper Association. before the Kiwanis Club in Montreal. He spoke of the remarkable growth of the industry and laid stress on the splendid position of the newsprint trade, by reason of the large export to the United States, which had resulted as a consequence of the passing of far-seeing provincial laws restricting the export of the raw material, and a free market on the other side of the line, which the Canadian mills had had during the last few years. In passing, he remarked that Canada now supplied over one-third of the total consumption of newsprint in the United States, which at present represented over 200 million tons per annum.

He pointed out that while the Canadian mills were utilizing the forests of the country in making paper, they were also broad enough to see the future and the rights of posterity in the country's natural assets. In fact, he intimated that extensive reforestation plans were now being carried out by the larger companies; and, in addition to this, some of the companies had already sent experts to Europe to study forest husbandry systems developed there, and were planning to concentrate on this matter in the next few years. He urged his audience, as Canadians, to do everything possible to increase the interest taken in the matter of reforestation so that the younger generation might grow up harboring a just pride in their heritage, and a determination to safeguard the basic element of all paper and lumbering industry.

As indicating what the industry amounted to in Canada, Mr. Dawe remarked that the capitalization of the companies engaged in pulp and paper making was now over 300 million dollars and that the industry employed over 25,000 men, with as many more engaged in the winter operations in the woods. The value of the exports of newsprint and pulp, marketed in the United States and the British colonies, was now over 180 million dollars per annum. As a means of offsetting the adverse trade balance of the United States, he suggested that these figures must be considered in a national way.

In addition to giving a description of the newsprint mills of the country, Mr. Dawe also outlined the manufacture of specialty papers and paper boards, and urged his hearers to buy Canadian papers wherever possible, and if impossible to obtain exactly the papers required, to remember that, through the exigencies of a small market, it was not always possible to produce in the same volume as the United States mills were capable of doing, with a market of over 100 million people. He also referred to the by-products of the industry, such as artificial silk, alcohol, paper clothes and paper barrels, and described the process of making waterproof pipes and other articles, which are manufactured from what used to be considered the waste product of the mills.

Speaking of the social side of the industry, he gave an interesting description of some of the model towns which have been created by the paper industries and which have been promoted by the companies for the purpose of housing their employees, under happy hygienic conditions. Instances of this feature of the industry were mentioned at Iroquois Falls, Grand Mere and Kipawa.

It was mentioned, in the course of Mr. Dawe's address, that the province of Quebec is supplying about 40 per cent. of the total Canadian pulp and paper production at the present time, and that under the present sympathetic government there was likelihood of it becoming the leader in the pulp and paper industry.

Want to Export Burned Pulpwood

A meeting of the N. B. Forest Advisory Board was recently held in Fredericton.

The Lumbermen's Association has been asked to fill the vacancy caused by the death of D. J. Buckley.

The term of office of Archibald Fraser as representative of the private timber limit holders expires on Dec. 31. His successor will be appointed after that date.

J. W. Vanderbeck, M.P.P., tendered his resignation as a member of the board of examiners of fire rangers. No appointment will be made to the vacant office until the next board meeting, January 12.

The delegation of limit holders who appeared before the board asked for permission to export burnt timber to the United States from crown lands as pulp wood. The Act of 1911 forbids export of lumber in the round to the United States, the intention being to encourage the manufacture of lumber in New Brunswick. The delegation advanced various arguments in support of its request, notably that the timber was out of danger of destruction after being burnt unless cut as soon as possible.

Big Tract of Lumber Made Available

Approximately 900,000,000 feet of timber will be made accessible for commercial use by the construction of an eight-mile logging railway in Maple Ridge Municipality, the contract for which was let to the Northern Construction Company of Vancouver. N. S. Lougheed, head of the Port Haney Lumber firm of Abernethy & Lougheed, and H. M. Johnston of Chicago signed the contract on behalf of the Miami Corporation, Chicago owners of the big limits behind the Lillooet rivers. The work is to be completed by next spring and in a few days the contractor will have a gang of men at work, for much of the preliminary surveying and sketching has been done.

Tries Side Piling of Lumber

A retail lumber firm in Boonville, Mo., has found it necessary to expand its plant to take care of the increased business. The office and yard of the company, located, are on one of the most prominent business sites in the place and the business district is steadily expanding about it. All lumber is kept under cover and this year a house and lot adjoining the old plant on the east were bought. On the rear part of this lot an additional shed was put up. This shed simply has a V-shaped roof with no sides and the lumber is piled sideways in the shed instead of endways. The company finds it much easier and quicker to pile and unpile lumber when it is stored in this manner.

Value vs. Quantity of Lumber Exports

Although the value of exports of lumber and other forest products of the United States in 1919 was approximately $137,000,000 as compared with $55,000,000 in 1915 and $87,000,000 in 1918, the quantity in feet and cubic feet does not show any such advance. The tremendous increase in value over quantity is due largely to money inflation and higher prices. It is impossible to give exact quantity figures for all wood manufacturers as quantity is of necessity variously computed by number of pieces, as of shingles and railroad ties; by board feet, as of lumber, and by tons, as of wood pulp.

Strong Advocate of Practical Forestry

Frank I. Ritchie, Three Rivers, P. Q.

Frank I. Ritchie, who is well-known in the lumber trade and has always taken an active interest in forestry work, is the president of the Quebec Forest Protective Association. He is a strong exponent of reforestation under practical methods, and a number of interesting articles from his pen have appeared from time to time in the "Canada Lumberman."

Mr. Ritchie is a son of Wm. Ritchie, one of the pioneers and largest lumbermen in the province of Quebec, and was associated with his father in the operation of his mills until they were sold to the Union Bag & Paper Co. in 1900. For the next ten years the subject of this reference was in charge of various operations in the Three Rivers district, when he became actively interested in the organization of the Wayagamack Pulp & Paper Co., Three Rivers, Que. At the time this progressive institution started operating, he was appointed superintendent of the lumber department, and is now, and has been for the past three years, manager of the company, which is making splendid progress and will, within the next few months, add six new machines to its equipment, practically doubling its production of kraft paper, both glazed and unglazed. The company does a large export business and also manufactures sulphate pulp, turning out about 200 tons daily.

Second Hand Machinery & Equipment Wanted & For Sale

Quick Action Section

Special Lots Of Lumber—Positions Wanted & Vacant

Lumber Wanted

Wanted

4 foot Body Hardwood by the cord for firewood purposes, in any quantity. Advances made.

Toronto Timber & Cordwood Co., Limited,
24-3 95 King St. E., Toronto, Ont.

PULPWOOD

We are open to purchase peeled Spruce and Balsam Pulpwood in carload lots. Quotations furnished on request.

The Jost Company, Limited,
285 Beaver Hall Hill,
1-t.f. Montreal, P.Q.

Pulp Wood

We are prepared to buy unlimited quantities of peeled poplar and hemlock and peeled or unpeeled spruce and balsam pulpwood.

ADVANCES MADE

Thompson & Heyland Lumber Company, Limited,
12-t.f. 123 Bay St., Toronto.

Lumber For Sale

Baled Shavings

For sale at attractive prices. Send your enquiry to L. S. Barrand Planing Mills, Pembroke, Ont. 24-3

FOR SALE—3000 Cords of Mixed White Birch and Tamarac, ready for shipment 10th December, 1920, at Stone Siding, A.E.R., 28 miles west of Sudbury. For further particulars apply to C. G. Hyett, Worthington, Ont., Soo branch C.P.R. 24-3

Pulpwood For Sale

1920-1921 Delivery

3,000-4,000 cords Spruce and Balsam.
1,000-1,500 cords Poplar.

JAMES THOMAS CLAIR,
11-t.f. Clair, N.B.

For Sale—White Ash

1 car each 1", 1¼", 1½" and 2" No. 1 Com.
1 car each 1", 1¼", 1½" and 2" No. 2 Com.

Dry Northern stock of good texture. Can ship immediately at attractive prices. Also have good stock other grades and thicknesses one inch to four inch. Address Box 426, Canada Lumberman, Toronto. 23-24

For Sale

115,000 ft. White Pine Lumber, classified as follows:—

1"	25,000
1½"	13,000
2"	64,000
3"	13,000

This cut of lumber, being out of large trees, runs very wide, and is well sawn. It was sawn in the months of January and February, stuck-up and covered and should be ready for shipment very soon.

For further particulars apply to J. A. Farnsworth, Cookshire, Que. 15-t.f.

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 25 cents per agate line (14 agate lines make one inch). $3.50 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

PILES FOR SALE—Norway Pine and Jack Pine Piles 30 to 60 feet. Wish to contract for a quantity of these, delivered on cars at Whitefish or on Vermillion River. Con. McGuire, Whitefish P. O., Ont. 24-3

Selected Trimmer Ends

8 to 10 cars White Pine Selected Trimmer Ends for sale. For prices and particulars apply JOHN B. SMITH & SONS, Toronto, Ont. 23

Bala, Ont.
24-1

For Sale

Planing Mill on Canadian National Railway Lines, between Levis and Mont Joli, doing a Milling In Transit business, working night and day, with work ahead, guaranteed for several months at profitable prices. Fully equipped with planer, sticker, ripper, re-saw; handling several cars daily, with siding capacity of five cars, which is shortly to be extended to nine cars capacity; right in the heart of lumber section where more than ten times mill's capacity has been refused due to over-taxing of mill. Mill built of cement with cement floor, with additional buildings for Sash and Door Factory or Box Factory attached, and sheds for piling, also with piling ground for around half of million feet of lumber. Sellers will guarantee work several weeks ahead. Price $30,000.00, on terms that will be satisfactory. A live man or group of men can easily clean up $20,000.00 a year net profit, and mill can be extended for increased business very easily up to ten cars per day. Principals only. If interested write to Box 430, Canada Lumberman, Toronto, Ont. 24-4

Lumber Property For Sale

About 8,000 acres (held in fee) of lumber lands estimated to contain about 30,000,000 sp. feet of merchantable soft wood.

As a pulp wood proposition, this property should contain 60,000 cords or more.

Included with the lands, is a saw mill, equipped with Dutch furnaces, Waterous edger, planer and lath machine, and situated along the line of the C. N. Railway, the port lies within three miles of the mill, so that water shipments may be made as well as rail.

All the lands are within easy distance of the river, and stream driving does not exceed a distance of more than six miles.

For further information apply to

E. A. SMITH,
Shediac, N. B.
23t.f.

Miscellaneous

SAWDUST GRATES WANTED: about 75 sq. feet, good and heavy, 4 or 5 ft. long. French River Lumber Co., Bigwood, Ont. 23-24

TENDERS for Pulpwood and Timber Limit

Tenders will be received by the undersigned up to and including the **18th day of December, 1920**, for the right to cut forest products on an area in the English River Water Shed.

Tenderers shall state the amount of lump sum cash bonus they are prepared to pay, which sum shall be in addition to the rates of Crown Dues fixed by Order in Council dated 27th day of March, 1920.

Parties making tender will be required to deposit a marked cheque payable to the Treasurer of the Province of Ontario for the entire amount of the lump sum bonus specified above, which lump sum shall be forfeited to the Crown if the successful tenderer does not enter into an agreement as provided in conditions of sale.

The highest or any tender not necessarily accepted.

General terms and conditions of sale may be had by applying to the undersigned.

BENIAH BOWMAN,
Minister of Lands and Forests.

Toronto, September 24th, 1920.

N.B.—No unauthorized publication of this notice will be paid for. 23-24

Tenders for Pulpwood and Pine Limit

Tenders will be received by the undersigned up to and including **the 29th day of December, 1920**, for the right to cut pulpwood and pine timber on a certain area situated on the North Shore of Lake Superior, and territory adjacent thereto, in the district of Thunder Bay.

Tenders shall state the amount per cord on pulpwood, and per thousand feet board measure on pine, that they are prepared to pay as a bonus in addition to dues of 80c per cord for spruce and 40c per cord for other pulpwoods, and $2.50 per thousand feet board measure for pine, or such other rates as may from time to time be fixed by the Lieutenant-Governor-in-Council for the right to operate a pulp mill and a paper mill on or near the area referred to.

The successful tenderer shall be required to erect a mill or mills on or near the territory and to manufacture the wood into pulp and paper in the Province of Ontario.

Parties making tender will be required to deposit with their tender a marked cheque payable to the Honourable the Treasurer of the Province of Ontario for twenty-five thousand dollars ($25,000), which amount will be forfeited in the event of their not entering into agreement to carry out the conditions, etc.

The highest or any tender not necessarily accepted.

General terms and conditions of sale, together with particulars and description of territory, may be had on application to the undersigned.

BENIAH BOWMAN,
Minister of Lands and Forests.

Toronto, 1920.

N.B.—No unauthorized publication of this notice will be paid for. 24

Sale of Timber

Tenders will be received by the undersigned up to and including **Friday, the 31st day of December next**, for the right to cut the timber on the south half of the Township of Shackleton, in the district of Temiskaming.

Terms and conditions of sale and further particulars may be obtained upon application to the undersigned or to Mr. Dalton Spence, Acting Crown Timber Agent, Cochrane, Ontario.

BENIAH BOWMAN,
Minister of Lands and Forests.

Toronto,
November 2nd, 1920. 23-24

Uses of Sycamore.

More than 50 per cent. of the sycamore cut in the United States is made into boxes and crates, says a recent bulletin of the Forest Service. In 1918, the estimated cut of sycamore was 30,000,000 feet. Arkansas cut 6,437,000 feet; Indiana, 3,457,000; Tennessee, 3,162,000, and Missouri, Ohio, Illinois, Mississippi, Kentucky and Louisiana each cut more than a million feet.

After boxes and crates, slack cooperage takes about 20 per cent. of the sycamore cut and furniture and fixtures more than 10 per cent. Much of the sycamore manufactured into furniture goes into common varieties, as kitchen cabinets, chairs, etc., and into the interior and hidden parts of more expensive furniture, especially drawer sides, backs and bottoms, shelves, linings and core material for veneers. Its moderate price is its chief advantage in such uses.

More than 300,000 feet of sycamore is used in making musical instruments. It is employed largely for the interior parts and braces of pianos and organs because of its fair degree of strength and moderate cost. It is also used for agricultural implements, carpet sweepers, trunks, sewing machines and wooden novelties.

One of its greatest advantages for boxes and crates is its non-contaminating qualities as well as its moderate strength and attractive appearance. Tobacco boxes and fruit and vegetable baskets and boxes are often made of sycamore and it is considered the best wood available for berry boxes as it will bend successfully without breaking when made into square or octagonal shaped boxes.

The sycamore occupies flood lands and areas along streams not suitable for cultivation. For this reason it is especially valuable to the agriculturist as it keeps his lands from washing. Its growth should be especially encouraged in such situations.

New Kiln Drying Process.

A kiln-drying process which will dry one-inch softwood lumber, green from the saw, to 10 per cent. moisture content in 24 hours or less has been developed at the U. S. Forest Products Laboratory at Madison. The novel feature of the process consists in forcing superheated steam at high velocity first in one direction and then in the opposite through the pile of lumber in the kiln. This treatment dries the lumber very uniformly and rapidly with a minimum of checking and warping. Drying lumber by this process consumes more steam per thousand feet of lumber than ordinary kiln-drying processes; it somewhat reduces the toughness of the lumber and cannot be used in thicknesses of more than two inches.

TIMBERLANDS FOR SALE

We have many attractive properties listed with us, for sale, in all parts of Canada and Newfoundland, in both Freehold and Crown lands.

BRITISH COLUMBIA
Large tracts of Cedar and Spruce situated on tide waters and the larger rivers, with or without saw mills.

NEW BRUNSWICK
Some very fine Freehold hardwood properties.

NEWFOUNDLAND
More than 3,000 square miles of the best timbered pulpwood land in the Colony.

ONTARIO
Many pulpwood and hardwood tracts, both Freehold and Crown land.

QUEBEC
Some excellent Freehold properties running heavily to pulpwood. Large pulpwood limits on the Upper Ottawa and on the North and South Shores of the St. Lawrence.

Cruiser's reports and blue prints, where available, will be sent to Principals or their accredited agents.

Review of Current Trade Conditions

Ontario and the East

General conditions in the lumber line remain unchanged, and, while some wholesalers report business as being fair, other dealers declare that trade is decidedly quiet. In certain lines the turn-over is spotty, but as a rule very few cars are being sold, and it is not expected that there will be any material alteration in conditions until after the new year.

All the retailers are marking time and wondering whether the bottom has been reached in prices. They declare that unless lumber comes down more, the farmers will not buy. The produce of the farmers has been lowered in value and yeomen naturally think that everything else will come down in proportion although lumber has taken a decided drop, particularly in hemlock, and reports are heard of cut prices. Travellers, who are out on the road, say that they are finding it difficult to interest purchasers, and factories who consume large quantities of hardwood, are not in the market just now unless it be for something to satisfy immediate requirements.

Labor appears to be plentiful at all points, and the report comes from Port Arthur and the Sudbury district that some operators have reduced the wages of lumberjacks from $70.00 to as low as $45.00 a month. This condition of affairs is, however, not general as yet although there may be some drop in the high figures, which have prevailed, after the Christmas holidays. Men are coming forward in larger quantities than camps can require or can accommodate them, and as logging operations are on a restricted scale, not as many lumberjacks are needed at this time as last season, and in the ranks of labor generally there is more unemployment.

In Eastern Canada the production of spruce will be very light, and it is also expected that the hemlock output in Ontario will not be large owing to the recent slump in quotations. Some souhern pine is still being offered at low prices by firms who are obliged to liquidate, and some purchases have been made. However, the offerings are not as plentiful in number or as low in price as they were some time ago.

It is too early as yet to give any indication of what the building demand will be for next year, and no prediction can be made whether the present level of values will be raised. Many believe that, as soon as confidence reasserts itself, declines in prices will cease and lumber will get back somewhere near the quotations that prevailed in 1918.

Stocks of most retailers are low and with the exception of a few firms, wholesalers are not heavily loaded up. There will be no particular hurry this season to buy cuts for 1921, judging by the present attitude of the wholesale price.

While much is heard regarding existing conditions, there are very few pessimists in the industry, and the number who are wearing blue spectacles can be counted on the fingers of one's hand. The outlook on the whole is regarded as favorable as soon as the present temporary period of depression has passed away, but the query arises when will it be over? The best guesses are that next spring will see the termination of the period of stagnation.

Fall building keeps up fairly well in the larger centers.

For the month of November the city architect's department, Toronto, issued building permits to the value of $1,482,914. For November, 1919, the total was $2,536,045; for eleven months of 1919, $17,779,811; eleven months this year, $24,333,045.

United States

What buying is done, is on a limited and conservative basis. Each week there is a further slump in other commodities and the feeling grows that the sooner these declines are over, the better. Then will the process of readjustment be ended and things get down to a normal prewar state. Speaking of declining values in lumber, a leading exchange says: "The outstanding feature of the present price movement is the resistance which the retail dealer is offering to the force of deflation, and if there is any force comparable to this resistance of the retailer, it is the termination of buyers to refrain from purchasing anything except absolute necessities.

In the eastern market there have been few inquiries of any importance, and the only buying that occurred was for special stock and railroad material. There has been a considerable shaking up in the late market and a few sales have been made at sacrifice prices. Many yards have practically all the stock on hand which they bought last spring, and one firm says "There are millions of lath on hand bought at $15.00 and up which the dealers had hoped of disposing of at $20.00 and up. These laths are being hustled out to-day at $12.50 retail, and with the yards taking this loss and big stocks on hand, there does not appear to be much hope of an early revival."

One concern say there is absolutely nothing in sight between now and spring, which will give the yards a chance to run their lumber out, and run this high-priced lumber out they must, before they will buy again.

Summing up generally, one market letter, sent out a few days ago, says:

Liquidation in general business has by no means been completed, although the prices of raw material, manufactured goods and wholesale lots have decreased to what must be the minimum in the greater proportion of industry, the retail prices have not fallen in proportion to wholesale. Until these stocks, which were purchased at former high levels, have been worked off or closed out by the retailers lowering their prices and taking a loss no normal demand can develop.

How close this country has come to a panic does not appear on the surface and is known only on the inside of the big banks. Just at present there is a false air of prosperity in the retail shops due to the holiday buying as the banks are unquestionably carrying these stores over the holiday, but once the holidays are over, you will see further price reduction until liquidation is completed.

By the end of the winter the readjustment period should be over and the general industry ready for a turn of normal activity, but under the circumstances no one should believe for a moment that this means a return to the speculative prices of 1920 as any attempt to reach those levels will immediately result in closing down what business develops and of a repetition of last year.

The real situation is clearly illustrated in the lumber business. The retail yards are stocked with high priced lumber which they are moving only in small parcel lots. They have stocks below previous records, but due to the change in business and new sources of supply it is not necessary for the retail yards to-day to carry the stocks of former years and they never will again; consequently it is fair to assume that their stocks are slightly under normal. They are doing no business; what little lumber they are selling is going for repair and industrial work, as there is no frame house construction whatever.

The hardwood demand is quiet and sales are few and far between. The requisition for hardwood lumber continued heavy and at peak prices considerably later in the year than the maximum softwood prices held. The same conditions which caused a drop in softwood prices have operated to bring about reduction in hardwoods; though these causes operated on the hardwood trade at a later date. The result is that the hardwood trade is now going through the experience that the softwood trade went through some weeks ago. The most encouraging feature of the market continues to be the export announced as having been placed in Memphis several weeks ago is an actual order and since its placement there have been a number of small orders given which lend encouragement to the millmen. Hardwood production is being greatly curtailed and stocks are not up to normal in many cases. There is a wide spread in prices with no set market.

Great Britain

The trend in business lately has been quiet and there is a tendency on the part of buyers to withhold from replenishing their stocks at present-day prices. The general opinion is that values have not yet reached their lowest limit, so that almost everybody is waiting to see if shippers in the U. S. A. will further reduce their prices for all kinds of American hardwoods. On the other hand, there are some merchants who hold fairly large stocks of imported timber bought before the recent decline in values, who are "hedging" themselves by purchasing further supplies at whatever lower offers they may obtain.

It is difficult to say whether prices will decline to such an extent as many people imagine. For one thing the rate of exchange is militating against any serious drop in values, while it would appear as though shippers, are becoming impatient at the lack of orders from this side, and are more inclined to come down in their ideas of values so as to secure a larger proportion of business. Whatever may be the ultimate outcome of the present situation. it must be admitted by everyone that a greater volume of trade would ensue if we were all sure that prices had reached the bottom.

We have said enough, we think, to show how extremely uncertain is the whole question, says an exchange. We are now more than half through November, and yet practically nothing has been done in the way of buying for the ensuing season. In an ordinary year, business commences in earnest about this time, and quite a number of special

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

contracts are fixed up. We doubt, however, whether anything of importance will be concluded this year, as all buyers state that they intend to wait until after Christmas before considering 1921 purchases. By that time the financial position should be clearer, and it will be seen how the general shortage of money and the fall in the prices of other commodities is going to affect the timber trade.

Dealing with the Continental market, we cannot write in a very hopeful strain. Two years after the war, Great Britain is still only commencing to recover, but France, Belgium and Germany are far worse off. Their international trade is hampered to such an extent by the depreciation in their currencies that the timber importers simply dare not attempt any larger business. This depreciation is due in a great measure to the fact that the national budgets have not been placed on a sound footing, and that the process known as deflation has scarcely commenced. In order to meet current expenses, all the Continental countries have to resort to the issue of fresh paper money, and until this ceases, there can be no real improvement. There must be a tremendous demand in France, Belgium and Germany for softwoods, but it costs too much to import, and therefore business cannot be done.

Meantime, in Great Britain, we find the consumption is just ready. Every day small contracts are made, and in these contracts prices keep up, because the wood is bought for immediate use, and for a specific purpose. Trade, of course, is not brick, and outside the housebuilding sizes there is no very large demand. Stockholders, therefore, must exercise patience, but if they avoid the fatal mistake of pressing their wood, they should be able to sell slowly at fairly good figures.

The worst market of all is spruce. Prices for months past have continued to drop. In the Manchester and Liverpool districts, the supplies are out of all proportion to the demand, and a lot of money must have been lost. In London and in other parts of Great Britain, the situation is not quite so acute, but it is bad enough, as the prices which spruce fetched at the last auction in London clearly show. Over the market hangs the cloud of the old Government stock. It is not known how much of this is still left unshipped, but reports state a very considerable quantity, and it is also believed that there is a lot of rubbish among the unshipped balances. In this country, 3x9 in. St. John's spruce is scarcely worth more than about £35 to £40, while for the smaller sizes it is difficult to find buyers at any figure.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Quebec Trade Quiet and Production Not Large

The lumber trade in Quebec has undergone no change in its condition and judging from the present outlook, the activities for manufacture this winter will be greatly lessened in comparison to previous years. Quebec lumber firms consulted, regarding the situation, make the laconic reply that there are no changes in the situation, and they have as yet formulated no plans. The drop in prices and the high cost of production offer no encouragement. Together, with the stringency in the money market these factors are causing all Quebec firms to proceed with the utmost caution. The market is practically at a standstill and the retail trade doing very little, in fact no business. This is due to the continued high cost of material and the arrogant demand of labor.

Like all other sections of Canada, Quebec is suffering acutely from a scarcity of houses, and people are packed in apartment and rooming houses and tenements for want of home accommodation. Nevertheless those, with capital and a desire to build, are determined not to invest until the cost of material and labor comes down to meet the exigencies of those with money to invest in building that will at least give them a fair and equitable return.

The recent decision of the banking interests to loan no money is having an alarming effect on the people with medium means, who, finding they cannot obtain loans to carry on their business ventures, feel that there must be something amiss in the financial conditions of Canada. This has caused them to close their purses and sit tight on their holdings. When told that the banks are curtailing their loans in order to conserve their money to finance, the wheat crop of the Canadian West, they are dubious and make the reply that that is no reason why the general business activities of the whole Dominion of Canada should be sidetracked.

In the meantime the big lumber interests of the city and district of Quebec who have all their money practically tied up, and who have been closely watching the industrial condition in the United Kingdom, which show so little sign of adjustment in the present, have concluded to curtail greatly their operations in the woods and their mills this winter.

During the past season of navigation in the St. Lawrence, the lumber trade has been fairly good, in fact much in excess of expectations, but it is generally concluded that unless the building question in Great Britain undergoes a material change between now and next spring, Canadian lumber products will be greatly affected. Export business will be diminished and competition, that is sure to ensue by no demand, will destroy profits, a future condition that the Quebec trade are carefully watching, and using their sense of judgment accordingly. In consequence they have decided to curtail operations for manufacture this winter. The news of the curtailment of operations is beginning to have an affect on laborers, who are realizing that the demand for their service in the woods and in the mills will also be curtailed.

The pulpwood business at Quebec is also at the present suffering from a slow market. The pulp and paper mills having stopped buying, is causing the dealers considerable concern, especially those indebted largely to the banks. They feel, however, that the slump is only temporary and are determined to stand by their prices, knowing that in the end the mills will require their wood. The situation, however, is affecting the independent farmers, who for the past few years have been engaged in cutting pulpwood in the wooded sections of their farm lands, and just as soon as they realize that there is no immediate call for their wood, they will cease to operate. The French Canadian farmer is not the unsophisticated, ignorant habitant of the past, proving education has greatly enlightened him as to material things and his welfare, and as a close student of market conditions, he is not to be caught napping; therefore, rather than sacrifice his wood, he will quietly bide his time until things improve, with the knowledge that sooner or later his wood product will be needed. In the meantine he will quietly await his opportunity.

The meeting that took place between the Quebec limit-holders and the Provincial Government of Quebec, is having its good effect. Though no modification of the tariff has yet been declared, it is learned that the Government is studying the question with a likelihood of meeting the wishes of the limit-holders. The Government in the meantime has in a measure acceded to the petition as contained in the memorandum submitted by the deputation of the limit-holders, who waited on the Taschereau Administration on November 18 last in regard to article 12 of the forest regulations which forbade the licensees to cut on crown lands white or red pine measuring less than 13 inches, and other trees less than 12 inches in diameter. The correspondent of the "Canada Lumberman" was told by the Department of Lands and Forests, "That the department was now co-operating with the Quebec Limit Holders in connection with surveying under operation, with the object of having regulations strictly followed. The Department has modified article 12 passed by order-in-Council in April last, which will allow the cutting of spruce below the diameter stipulated in article 12, providing the findings of the inspection warrants it.

Mr. G. C. Piche, superintendent of the forest branch of the service in an interview with the "Canada Lumberman" said: "We are employing forty men this winter to assist the usual staff in checking operations in the woods. In many cases the lumbermen also furnish an inspector who travels with the Government inspector. Thus we have secured a walking tribunal who immediately fines the jobbers who violate the law. Posters are put up in each lumber camp, explaining how the logs must be cut, with the threat that any man who cuts below the permitted size will be liable to a fine of $3 per tree.

"There have been complaints that some of the pulpwood camps were butchering their forests, but this the Quebec Government will not tolerate or any such infraction of the law. We wish to, and are determined to preserve the forests, and perpetuate them in the best manner possible, the law in regard to lumber and pulpwood operations must be strictly obeyed.

"The Quebec forest engineers, despatched to Europe, have arrived at Paris, France, and have begun their studies, as outlined in the last edition of the "Canada Lumberman."

Montreal Market Slow and Trade Dull

The Montreal market continues very quiet. Here and there business is fair but on the whole the market is slow. Although prices have of course declined from their previous high level, the drop in quotations has had no effect in stimulating sales.

In discussing conditions with wholesalers two main ideas developed—one is, that in the spring there is likely to be a recovery in

the direction of a greater consumption, due to more construction. This larger building programme will, it is argued, be influenced by the probable reduction of values in general building materials, in line with the lower prices for many commodities. Lumber, it is further argued, has already dropped, and that there is not an appreciable margin for lower values, having regard to the cost of production. The other idea is, that there is little hope of any great increase in business, this view being based on the assumption that there is little hope of any great increase in business, and no encouragement in the present situation for expansion. It is true that there is a shortage of houses, but even should the cost of building be reduced, it will not come down to such an extent as to invite the expenditure of any large sums. Moreover, many manufacturing departments are now being carried on at a loss, and there will be no spare capital to be spent in new ventures requiring lumber.

Some reports from the Province are to the effect that the new cut will be considerably smaller. The output from the camps is likely to be curtailed.

The general woodworking firms have a good amount of work in hand, one company being engaged on a very large order of pine doors for the Old Country.

The housing problem in Montreal is still acute. The Administrative Commissioners having made no progress with the scheme for workmen's dwellings, a meeting of contractors and supply firms was held to expedite matters. A committee was appointed to wait on the Commissioners, with a view to some aggressive action being taken.

For the month of November Montreal building permits totalled $612,810, a decrease of $278,054, as compared with the corresponding period last year. For the eleven months the total was $13,685,455, a gain of $4,309,955.

Market at Ottawa is Quiet and Orders Scattered

A continued slowness of business, coupled with firm prices, and the hope in some circles that the first few months of 1921 would bring about a change for the better, were the principal features of the Ottawa lumber situation during the opening period of December.

Taken all around, trade was abnormally slow even for the season of the year, and some sellers stated it was the dullest market they had witnessed since the autumn of 1913. Orders or inquiries either from the domestic or United States markets were practically nil, and very little trading went on with the European countries. Stocks in most instances were more plentiful than in demand, but most buyers did not express great apprehension as to their ultimate disposition and seemed willing to retain stocks rather than cut prices or sacrifice them.

The general view taken as to the future was that it would largely depend on the amount of building that would be undertaken next spring. In this connection the two dominant factors to the minds of the trade were "the easiness of money," and the attitude of labor.

The money market at present as the retail and part of the wholesale trade sees it, is that money is "exceptionally tight" and that the banks will not advance it for speculative building purposes. This they point out has had a great deal to do with the curtailment of building operations, which consequently reflects itself on the lumber market.

"No one can just tell what the readjustment will bring about. Unless the banks loosen up and loan money to home builders and for commercial building there is not going to be the volume of building next spring that should take place. Consequently there is not going to be the demand for lumber stocks if building does not go ahead," was the summary of one wholesaler. He was also of the opinion that if money could be more readily secured from the banks that 1921 would see one of the greatest building booms that Canada has ever witnessed. So far as Ottawa goes, the indications are that there is going to be a shortage of commercial space next spring. Some prospective builders have seen it coming and were willing to go ahead and take a chance on putting up buildings this fall and winter, but were unable to secure the necessary credits from the banks.

Inquiry in manufacturing circles shows that the banks are on the whole taking care of their old customers, and advancing credits for the continuance of the woods operations. Very few, except the "bigger fellows" are financially able to take care of the whole of their woods operations and the sawmill cutting season, and wait for their money until their lumber is sold. Consequently they go to the banks for advances and when the cash is received for the sale of their lumber, they repay their loans. With some of the smaller companies, it is heard in the trade, that difficulty has been experienced in financing woods operations.

In regard to the labor situation, from the woods end, the fact is becoming plainer that woodsmen or many of them let their opportunity for employment go by early in the fall when their services were not available to the lumbering companies, who could not find enough men to fill the camps they intended to put in. In face of this fewer camps were established and the woods production this year shall drop conisderably. As an instance, one company who usually cut 18,000,000 feet reports a cut of only 7,000,000 for last season, and predicts this season will be lower than last.

"The time for fast logging has gone past, the months of September and early October are the best period of the year for bush operations, but this year the men were not available, and it is too late now to begin to open up new operations," was the comment of one of the leading manufacturers.

Another point that the members of the whole lumber trade are turning over in their minds, is what the attitude of labor toward higher wages in the building industries next year is likely to be? If wages for labor go higher lumbermen are afraid that building will not be undertaken on a large scale, and consequently the demand for their product will fall away.

Besides a very slow movement in lumber the lath and shingle markets was also slow. Most of the few sales of shingles, it was reported, were British Columbia stock, which had been shipped on consignment and was sometimes sold before it reached its destination, depending on the price offered at the intervening points.

With the John R. Booth interests it was reported that about the same number of camps was in operation as last season, but what the production would be, or what the future lumber market would be like was stated by Mr. Jackson Booth "as only guess work." This company also stated that the tendency of woodsmen migrating from one camp to another showed up in the last few weeks and that men were now staying more permanently in the one camp.

The European export situation was reported to be even quieter than the Canadian or American markets, and even not so active as it was a year ago. This, exporters claimed, was largely due to the unsettled conditions prevailing in England, which was accelerated by the strike of the British coal miners, the effect of which was only now beginning to make itself felt on the trade in this country.

Another factor was, that the English market was conceded to be well stocked, and that until conditions righted themselves and owners of the stock on the other side saw their way clear to dispose of it that they were not inclined to order more. The improvement in the exchange rate was referred to as a favorable sign, but, on the other hand, it was also mentioned that all of the stock purchased some time ago by Sir James Ball, the British Timber Controlier, had not yet been "cleaned up."

Rail transportation remained good and foreign cars were plentiful.

Mr. Caverhill Takes Over New Duties

Peter Z. Caverhill, who succeeds M. A. Grainger as chief forester of British Columbia, has entered upon his new duties. Mr. Grainger, who had been associated with the forestry department since its reorganization in 1911 and who was chief forester for two years, resigned to enter private business and will probably locate in Vancouver. Mr. Caverhill, who has been in the British Columbia forest service for some time and recently as district forester at Vancouver, was formerly chief forester for the province of New Brunswick. He was graduated from

P. Z. Caverhill, Victoria, B. C.
Newly appointed Chief Forester for British Columbia.

the New Brunswick Forestry School and for two years was associated with the Dominion Government forest service, with headquarters in Alberta. He came to British Columbia in 1912 and became a member of the forest service under H. R. MacMillan. Later he returned to New Brunswick to take charge of the department, but in 1917 he returned to British Columbia, where he has remained since.

What Will 1921 Bring in Lumber Line

How Far will Demand for Forest Products Reassert Itself and the Level of Prices Rise?

By A. E. Mothersill

As we near the end of 1920, the average business man and manufacturer is giving thought and attention to what stocks they have on hand and considering what the year 1921 will bring forth. The question is being asked on all sides—have prices on lumber and all other commodities touched bottom? and when will a revival of demand and volume of turnover set in

Keeping careful watch over the present and trying to gauge the future is uppermost just now in the minds of most men. It is well known that after every great upheaval like a war that economic industrial and social conditions are decidedly upset. The process of readjustment is neither as swift nor as certain as many would like to see. "As has been predicted" are words which no longer carry much weight, for the simple reason that this is a period when all prophecies go by the board and the usual omens no longer illumine the pathway of the days to come. There is nothing more unsettled than what lumber prices, wages and production will be during the approaching year.

There is one thing certain and that is some improvement is bound to take place, but just how far demand will reassert itself and prices rise—for no one expects they will recede to pre-war levels—depends on many factors, and among them are European conditions and credits, industrial expansion, building operations, the cost of living, scale of wages, public confidence and an optimistic spirit.

Every activity and enterprise has been followed by extraordinary inflation since the war ended. Nearly two years of unparalleled prosperity and generous returns on investment and business operations have ensued. During the past few months, however, we have been experiencing more or less depression—a period of curtailment in production, a general attack on and resenting of high prices and a sincere desire "to get from under." The question every business man must now decide for himself is how far will depression go, and how long will it last and what will be the truth.

A conference of bankers, manufacturers and economists was recently held by the Harvard Bureau of Economic Research. The probable drift of business during the next six months was discussed and the consensus of opinion was that the present quietness will extend to about next spring and that thereafter there will be a revival of business which may, however, not be of very large proportions, or, if so, not very long continued.

This forecast is based partly upon the course of commodity prices. In the war period, with the "price revolution" of the "fifty-cent dollar," however, it broke down. Just as we have had an unprecedented rise in prices we now are having an unprecedented fall. Such a violent and comparatively sudden fall is almost certain to produce an almost equally violent upward rebound, or a protracted period of stagnation. If the latter be the result then the price of labor must immediately fall, perhaps more than commensurately with the fall of the commodity markets, for if we are entering a long stretch of business stagnation the buying and therefore the production of all commodities will be of the hand to mouth variety and prices will therefore continue low.

If, however, the end of this period of falling prices ends definitely in the near future, as the majority confidently believe, and a new rise in prices starts, it might mean and should mean another business boom.

It seems probable that no real over production of goods has taken place. The present situation was brought about largely by the absurd prices which the owners of all commodities demand for their wares and the recent panic on the part of buyers frantically bidding against each other for the things they desired. When the end of this orgy was in sight and prices ceased to go up, the decline was rapid because both sellers and buyers fully realized that business was being done on an inflated basis. This applies to the lumber line as well as others and the sellers haing that knowledge were anxious to dispose of all goods before the demand ceased entirely. Buyers, seeing prices melt away, are loath to purchase even the things they really need at enormously reduced prices for fear prices will decline still further. This condition is accentuated by the overstrained credit situation and the resultant necessity of calling loans.

If there is an enormous latent buying power and buying desire only waiting for prices to strike bottom, the rebound in prices and in business, when it comes, should be rapid. With an average reduction in the cost of commodities nearly 30 per cent. from the peak reached in the spring of 1920, the amount of money and credit required to transact the business of the country is enormously lessened, and both money and credit should soon be easier as the natural result.

New Wholesale Lumber Firm Formed

Lay & Haight is the name of a new wholesale lumber firm which has just been formed with head office at Room 21, 34 Victoria St., Toronto. They will handle general stocks of white pine, red pine, jack pine and spruce, and may later on do something in the way of selling B. C. stocks.

Both members of the firm—Gilbert S. Lay of Toronto, and D. H. Haight of Sudbury—are well known to the industry and are practical lumbermen.

Points to Watch in Ordering Lumber

An eastern U. S. lumber firm has formulated several points to observe when ordering lumber. The suggestions are well worth keeping in mind:—

1. Consider carefully points you wish to cover in your order.
2. Shippers must be financially responsible, or satisfactory to you by reputation.
3. Terms.
4. Time of shipment, approximately.
5. If orders are given to travellers, have it understood that before his company enters the order, his company mail you an acceptance so worded that wou will be mutually agreed on all points.
6. Wire order for transit cars is very dangerous.
7. Consider the terms, grading, method of working, widths and thickness will be accorded to custom rules at shipping points unless otherwise agreed.
8. Dryness, air or kiln-dried.
9. If air-dried, it is best to go by weight, since most trouble will come from southwestern short leaf, on account of stain, etc.
10. If kiln-dried, especially in expensive woods, must be done with modern equipment; case hardened, warped, split output won't do.
11. Flooring, ceiling and all worked lumber be sure and agree on percentage of lengths and widths.
12. Thickness, whether rough or dressed, have your shipper note what he intends to ship.
13. Kind of car, rack, box or open car.
14. If high-priced material, car roof must be tested for leaks.
15. Routing.
16. Discount, amount, when.
17. Mention bundled or loose stock. In flooring and ceiling, how many pieces to bundle.
18. Hemlock mention grade No. 1, Merchant, or No. 2.
19. Lath, be careful about widths, thickness and lengths.
20. If lumber is purchased at shipping point, agree on freight rates.
21. Working of flooring, hollow back, planed one side and matched, or planed one side and centre matched.
22. All hardwood flooring must be according to the Hardwood Manufacturers' Association Rules, as regarding grades, percentage of lengths, etc.
23. Do not confuse Coast Stock, especially in roofers and flooring, with South Western, as to the grades and working.

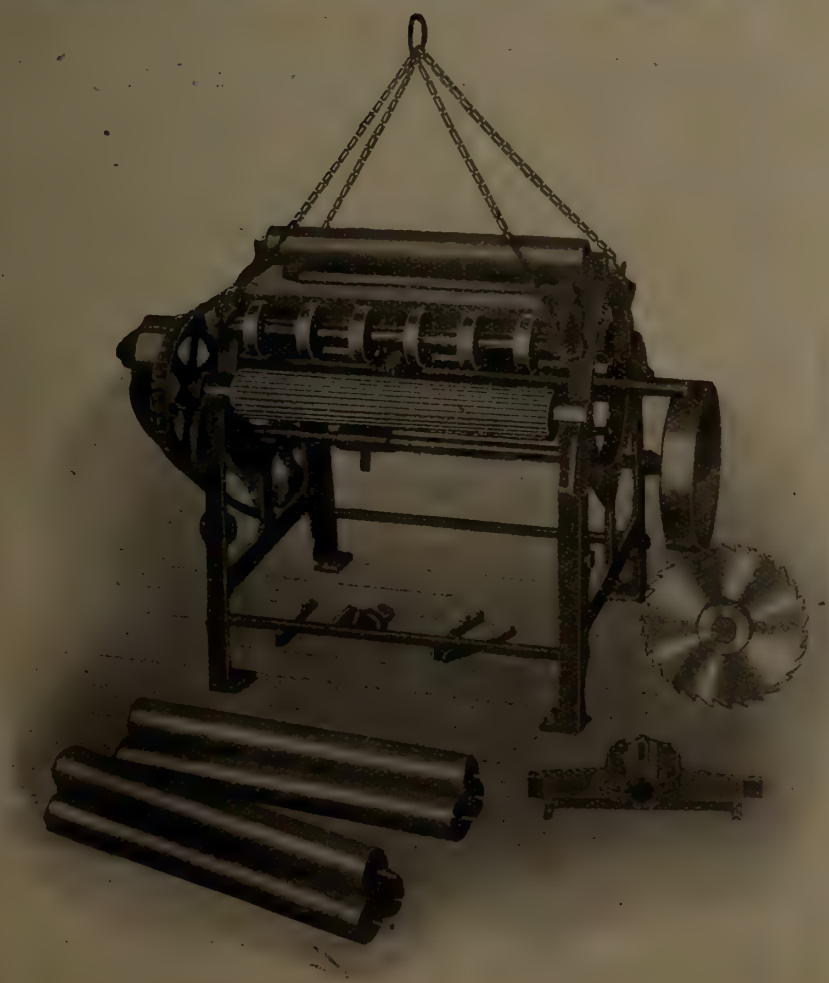
The Ideal Edger for Light Mills



Specifications

Our new Double Edger is built on entirely new lines, and possesses many features that commend it to mill men. The saving in material alone will soon pay for the machine. The output of a mill with this machine can be increased by one-third. It is best adapted for medium-sized or portable mills that cut from 5,000 to 25,000 feet of lumber per day.

SAWS—This Edger is fitted with either two or three saws as required. The saws are 16 in. in diameter, and 10 in. gauge. The greatest distance between saws is:—Two saw machines, 24 in.; three saw machine, 20 in., the least distance between saws, 2 in.

DRIVE PULLEY—The Drive Pulley is 9 in. x 9 in., affording a good belt grip, and is supported by an outside bearing.

SAW ARBOR—The Saw Arbor is made of 2½ in. steel, and has very wide bearings.

EDGINGS

Ontario

The Hintonburg Planing Mill on Armstrong St., Ottawa, which was burned down recently, is being rebuilt. The work is being done by day labor.

The Renfrew Town Council has adopted a resolution asking residents to plant no more North Carolina poplars, a tree growing in Renfrew, as the roots spread so as to block sewers.

T. S. Woollings & Co., Limited, Englehart, Ont., were recently granted a provincial charter of incorporation to manufacture and deal in timber, lumber and other forest products and to take over the business conducted by Thomas Smith Woollings. Capital $200,000.

Toronto Timber and Cord Wood Co., Limited, Toronto, Ont., have been incorporated with provincial charter to manufacture and deal in lumber, timber and wood products. Capital $40,000. J. R. Roaf and J. Creighton, solicitors, both of Toronto, are two of the incorporators.

The Abitibi Power & Paper Co. of Iroquois Falls, Ont., are pushing woods operations and have about three thousand men busy cutting. The company have opened up two new camps this season and innumerable jobbers and sub-jobbers are busy getting out logs to float down the river in the spring.

The name of the Canada Boxboard Co., of which D. F. Robertson of Montreal, is general manager, has been changed to the Canadian Paperboard Co. The company are the largest producers of board in the Dominion and have mills at Montreal, Campbellford and Frankford, Ont. A new groundwood plant will shortly be put in operation at the latter point.

Every employee of the Abitibi Power and Paper Company, Iroquois Falls, Ont., who is a householder, has during the past few days been the recipient of a card which entitles the holder to a turkey for Christmas. This gift is accompanied with the compliments of F. H. Hanson, president of the company. The list includes every employee whether in the mills, woods or town, who is a householder.

The merchants and business men of Picton and Prince Edward County held a reunion recently. It was a great get-together meeting with the idea of discussing the best methods of dealing with present market conditions. Mayor Newman, who is also president of the Board of Trade, presided, and among those who delivered addresses were A. J. Young of the Young Lumber Co., North Bay and Toronto.

Andrew Martin of the Cochrane Lumber Co., North Bay, lost his life recently while hunting. Mr. Martin and a young man were going down a hill, the latter walking behind. The latter's gun struck a stump and discharged a shot which went through Mr. Martin's body. When the member of the rescuing party reached Mr. Martin, he was able to talk, but became unconscious before the others came up. The body was brought to North Bay. Mr. Martin was a man of about 60 years of age and leaves a wife and grown-up family.

The Department of Lands and Forests of the Ontario Government is calling for tenders for the right to cut pulpwood and pine timber on a certain area situated on the north shore of Lake Superior and territory adjacent thereto. Tenders will be received up to the 29th day of December. They are required to state the amount per cord on pulpwood and per M. feet, b.m., on pine, that they are prepared to pay as a bonus, in addition to the dues of 80c per cord for spruce and 40c per cord for other pulpwoods, and $2.50 per M. feet, b.m., for pine, or such other rates as may be from time to time fixed for the right to operate a pulp and paper mill on or near the area. The successful tenderer must erect a mill on the limits within a specified time.

A charter has been granted to the Cornwall Pulp & Paper Co., with a capital stock of $200,000. The men behind the enterprise are principally from Buffalo, N.Y., the president being J. B. O'Brien, who holds a similar position with the Niagara Wallboard Paper Co. The treasurer is C. C. Hullinger, who is also connected with the Niagara Wallboard Co. and the Maine Pulp & Paper Co. The company have leased a building in Cornwall which they may purchase later on, the premises being formerly occupied by Ross & Co. It is the intention to turn out groundwood pulp to the extent of forty tons a day. Five grinders are being installed and it is expected that operations will begin early in the new year. Later on heavy paper specialties, such as wallboard, beaver board, etc., will be turned out. E. E. Emigh, of Richmond, Va., is in charge of the plant.

Eastern Canada

Price Bros. & Co., of Quebec, will build a new sawmill at Montmagny in the spring.

It is reported that Mr. J. H. Dansereau is contemplating conducting a pulp mill at Sorel, P.Q.

The contract for the erection of the Three Rivers Pulp & Paper Co., Ltd., plant, including wharves, docks, etc., has been let to William I. Bishop, Ltd., Montreal.

The "Union Co-operative Agricole" of Harricana, Abitibi, has just signed a big contract with the International Company of New York for 25,000 cords of pulpwood at very fair prices.

The Laurentide Co., whose plant is located at Grand Mere, Que., is now turning out 400 tons of newsprint daily as compared with 225 a few weeks ago. Two new machines have been recently installed and are working in a satisfactory manner.

Maisonneuve Box & Lumber, Limited, Montreal, P.Q., have been incorporated to acquire the business and interests of La Fabrique de Bois Laval, Limitee, and to manufacture all kinds of wooden boxes. Capital $49,500. E. Abel and J. T. Legault, both of Montreal, are two of the incorporators.

In connection with a recent despatch from Quebec to the effect that the mills of the Brompton Pulp and Lumber Company, at Brompton, Quebec, were to be closed down for the winter, in order to carry out extensive repairs to the plant, it need hardly be stated that the company referred to is in no

way connected with the Brompton Pulp and Paper Company. Offices of this company stated to-day that the several plants of the enterprise were working to capacity at the present time, and that, earnings were being maintained at the record levels, established in the last quarter of the current year.

While a strong easterly gale was raging recently, the mill of the Canada Box and Lumber Company, Bergmont avenue, Limoilu, was destroyed by fire entailing a loss of about $70,000. As a result of the high wind the firemen were powerless to arrest the progress of the flames. The loss is partially covered by insurance.

W. and J. Sharples, Limited, Quebec, P.Q., were recently granted a federal charter of incorporation to take over the business known as W. & J. Sharples, Reg., and to conduct a general lumber business, importing and exporting lumber, timber and other forest products. Capital $1,500,000. W. Power and J. G. Levie, both of Quebec, are two of the incorporators.

The Laurentide Company have purchased 404 square miles of timber limits in Saguenay County, 145 miles below Quebec city. These contain about 1,500,000 available cords of pulpwood, and this winter 10,000 cords will be cut. The pulpwood will be shipped first on barges to St. Augustin, twenty miles from Quebec, then shipped by National Transcontinental to the Black River, and thence by water down to the Laurentide mills.

Western Canada

A firm known as the City Lumber Yards, Winnipeg, Man., has recently entered the lumber business.

Another concern has launched into the field of "knock-down houses." The Mill Cut Homes & Lumber, Ltd., with $50,000 capital, has been organized in Vancouver.

Nicola Pine Mills, Limited, made a record run for its first season of active lumber cutting. Their total output for 1920 is estimated at 33,000,000 feet, of which 10,000,000 approximately is piled out and seasoned in their yards.

At a recent meeting of the Canadian Credit Men's Trust Association, held in Vancouver, Mark Rector, manager of the International Timber Co., gave an address on the logging and lumbering industry of British Columbia.

It is understood that a fibre box manufacturing company have been looking over the situation in Vernon, B.C., with a view to producing their patent boxes which are highly suitable for many of the fruit products of this valley.

Thomas Gwilt, of the Gwilt Lumber Company, Nanaimo, has purchased Dan Kilpatrick's interest in the Bevan Lumber Company, Ltd., at Bevan, and will co-operate with Major Hilton in running the business, according to news from Comox.

McKinnell's, Limited, Tuelon, Man., were recently granted a provincial charter of incorporation as wholesale dealers in lumber and timber. Capital $20,000. W. C. McKinnell and G. A. Elliot of Tuelon, Man., are two of the incorporators.

A. K. Bannerman of the Associated Mills, Limited, Vancouver, has returned from an extended eastern tour, covering Canadian and American cities. His trip was mainly a business one undertaken to get in personal touch with conditions in eastern markets and to meet the company's agents.

The Adolph Lumber Company, Limited, has closed its logging camps for the present indefinitely. They cut 10,000,000 feet of lumber in 1920, which is about the same as their 1919 run. Of this amount they are carrying over about 4,000,000 feet in their yards, and with the present state of trade they are not shipping out much of it.

The Laminated Materials Co., Ltd., of New Westminster, has been organized into a joint stock company with capital of $400,000. The company specializes in panels and veneer and other goods, made from cottonwood, and prepared by their own secret processes which render it waterproof and impervious to weather conditions.

Hon. T. W. McGarry, K.C., newly-elected president of the Whalen Pulp & Paper Mills, Limited, returned east early recently, after paying his first visit to the company's head offices in Vancouver, and also making a trip of personal inspection to the three plants operated by the company up the coast. Among the party accompanying him on his visit to the pulp mills was Mr. Jas. Whalen and Mr. W. D. Ross, prominent directors in the pulp company. Mr. McGarry plans to return to the coast very soon on another business trip in connection with the Whalen Company's affairs.

H. H. Ross, general manager of the Ross-Saskatoon Lumber Company, Limited, looks for fair revival of prairie business after January 1st, though trade is dull now. His company is preparing for the 1921 season by putting in a new horizontal band re-saw, which will greatly increase their capacity and power to utilize their cants to advantage. The mill record for 1920 was 14,000,000 feet of lumber, which is 3,000,000 more than they cut in 1919. They are carrying at the present time in their yards, 8,500,000 of high-grade seasoned stock. During the winter one camp is operating and three or four million feet of logs will be got out. The supply of camp labor is improving.

If Canada expects to capture a portion of the world-trade and share in the business of foreign countries in the great reconstruction work, it is high time that some manufacturers and business interests awaken from their torpor. There is little need of saying anything further in this regard, as a recent despatch from Windsor, Ont., tells a tale that no Canadian can point to with pride. Here it is: Urging Canadian manufacturers to "get busy" in cultivating the export trade of Great Britain and its Dominions, A. N. Lawrence, Foreign Sales Agent for the Ford Motor Co., recently told members of the Chamber of Commerce that during his trip of 62,000 miles around the world, he had not seen one Canadian salesman. Americans are monopolizing the export trade of the British Dominions, he added.

The lumber merchants who are making a marked success of their business, are those who leave just as little to haphazard fortune as possible.

"By-Pass" Blower Systems

for green saw dust and wet stringy material

Material that usually clogs the ordinary Blower is handled easily and continuously by our "By-Pass" Blowers. No material passes through or around the fan. That is the big secret of "By-Pass" success. Slow speed and minimum power are other strong features. Write for literature and all details.

We manufacture and install complete systems

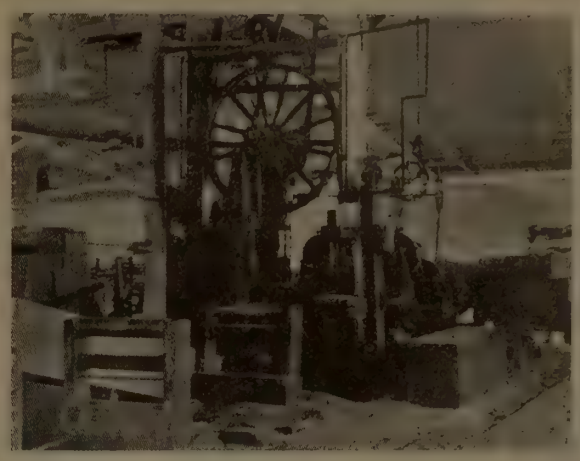
Ploughs Right Through "Iron Bark"

Ball-bearing Equipped Resaw Stands Up to Work in Fine Shape, Says Filer of Southern Sawmill

In spite of the constantly-growing use of ball bearings in woodworking machines, some millmen still hesitate to trust them on heavy, hard service. The well-known anti-friction qualities, the dust-proof boxes, the saving in oil and power effected—all this is admitted—but the fear that something will go wrong later seems to dominate many minds. Possibly the reason for this feeling is that the claims for ball bearings seem too good to be true.



Ball bearing resaw at work

Skeptics are inclined to wait for the other fellow to test out machines fitted with ball bearings, and see what happens. Apparently that is the easiest course to follow, but when one takes into consideration that he is paying for extra power and oil and possibly several other items, such as babbitt, repairing and delays incident to repairs on bearings, etc., while continuing the use of babbitted bearings, he may find he has not adopted the cheapest course by any means.

The accompanying picture shows a machine on which ball bearings have been given a pretty severe test, and the "testing" still continues. It is a 54-in. band resaw which was installed in the Hammond Lumber Co.'s big planing mill, at San Pedro, Calif., in July, 1918—over two years ago. It has not only been in daily service since then, but has been used regularly on the night shift, which was maintained for six months, and on overtime runs three nights a week for several months.

The machine carries 18 and 19-gauge saws that are 7 in. wide when new, and the work is not "soft" by any means. Most of the stock resawed is fir, in all sizes from 1-in. boards to timbers 18 x 18-in. The rates of feed are from 32 to 192-ft. per minute. Stock 8-in. thick is usually put through on the 110-ft. feed and 12-in. and over on the 65-ft. feed, although 12-in. boards and planks are sometimes fed 110-ft. per minute when the saw is newly-sharpened. The daily cut runs from 40,000 to 80,000-ft. board measure.

The machine, which is manufactured by the American Woodworking Co. of Rochester, N.Y., is handled in Canada by the Garlock-Walker Machinery Co. of Toronto. It is installed in a couple of Toronto woodworking plants and is equipped with six infeed rolls, which makes it particularly well-adapted to timber resawing. Not infrequently it is put to the supreme test of resawing large hewed timbers of Australian ironwood—"iron bark," some call it—and, gentlemen, this wood is rightly named; it's almost as heavy and hard as iron. The ironwood is brought over as ballast in ships returning from trips to Australia. When any of this wood is to be resawed at Hammond's, this band resaw is the "goat," but it stands up to the work in fine shape—and remember it is ball-bearing equipped!

Filer Fidel Schmitz puts up the saws for this machine—has put them up ever since it was installed—and says he has not had a crack or made a braze, due to breakage, in one of them in over two years. The wheels turn very easily; in fact, with a saw on the wheels and under full strain, a man can take hold of the blade and turn the wheels. Each bearing is fitted with a small hard-oil cup which is filled with special ball-bearing cup-grease once a day. The machine has its original bearings and has never given the least trouble.

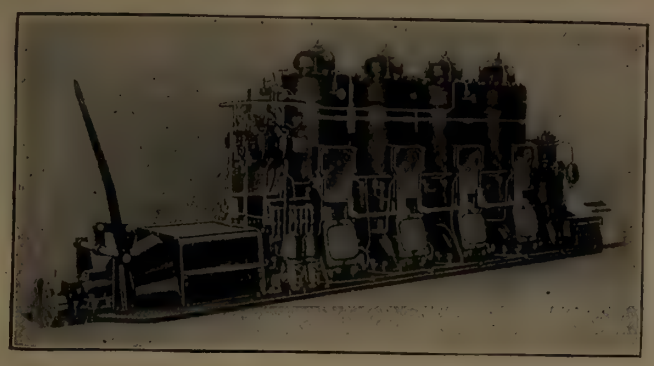
BOLINDER CRUDE OIL ENGINE

Most Efficient and Economical Power Equipment for Tug Boats and Barges



SWEDISH STEEL & IMPORTING CO., LIMITED
SHAUGHNESSY BUILDING MONTREAL

HORSES
for Lumber Camps

We always have a selection of young horses, weighing from 1,300 to 1,800 lbs.—a selection that will enable you to buy exactly what you want.

For fifty-five years the firm of J. W. Jacobs, Limited, has been in business—giving satisfaction to its customers and building up its reputation for honest dealing and fair prices. Our experience is valuable to you; our reputation is your guarantee.

J. W. JACOBS, LIMITED
29 Hermine Street, *Telephone Main 1630* Montreal

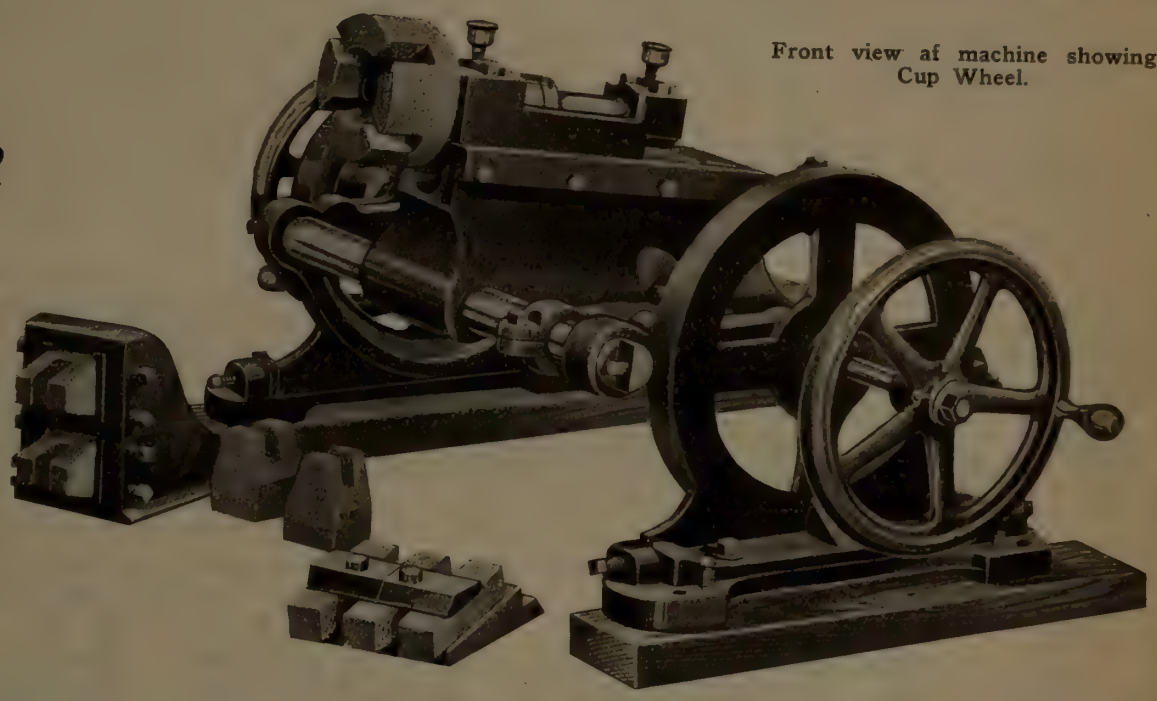
Over 500 Now In Use

The demand for GeBott Grinders has proven their worth in the short time they have been on the market. Many customers send in their repeat orders.

For grinding Band Wheels, and Planing Mill Resaws, the GeBott Grinder is supreme in its field.

Sturdy in construction, portable and entirely efficient, it is a machine that fills a long felt want in the planing mill. It is the only appliance that will grind a Clark mill without going into the pit to grind the lower wheel.

Write for further information .



Front view af machine showing Cup Wheel.

We can furnish rebuilt guaranteed filing room machinery for single or double band mills, and make prompt shipment. Your enquiries solicited and prices gladly given.

BEARINGS

The bearing is one of the most important parts of machinery—this is true in any industry—and the Lumber Trade is no exception.

Line your bearings with scientifically made Babbitts alloyed under the "Stanley Process." It is an elemental fact that there is less friction generated by high grade babbitts;—when friction is lessened, the wear and tear on your machinery is diminished.

Babbitt is designed to avoid friction. A scientific alloy accomplishes this best by its smooth homogeneity.

Specify "Stanley Process" Babbitts

Gunns Good FOOD

Greetings

The Christmas season is again with us—a time when a feeling of goodwill is abroad in the land. We take this opportunity to extend to all our customers a wish for a good old-time Yuletide, and a New Year that will yield its full measure of Success and Prosperity. We thank our many friends in the lumber industry for past favours, and look forward to our pleasant business relations in 1921.

The Christmas dinner in camp will be a big success if "Easi-first" Shortening is used in the preparation thereof. The cook prefers "Easifirst."

FIRE BRICK
AND CLAY

We make several brands of fire brick made by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best adapted fire brick for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse, which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel," "St. Marys," "Keystone" and "M.D. Elk"

DUPLEX TRUCKS

BUILT FOR BUSINESS

Hauling Logs Successfully With a Duplex 4-Wheel Drive Truck

Read What J. L. Smith, Dallas, Oregon, Says About His Duplex— How It Is the Most Dependable Truck He Has Ever Seen Used

J. L. Smith, Dallas, Oregon, bought his first Duplex in the winter of 1917 to haul logs.

He had heard of the truck through the enthusiasm of the County Commissioner of Polk County, Oregon—that it had pulled the standard size Russell Scarified in 8″ of hard macadam.

$40 Repair Cost For One Year's Work Hauling Logs

"After one year's hard work," says Mr. Smith, "hauling logs, mining props, and piling with something like $40 for repairs, I placed my order for a second Duplex to handle additional contracts.

"This truck has always worked with a 2-wheel trailer and hauled loads on the truck and trailer up to ten tons right out of the woods, through creek beds, across fields, wherever I wanted to go

"Some of these loads of piling were 90 feet long and the props fo rmining purposes averaged 40 feet.

"I am still running on the original set of tires and they are good for this season. I am now hauling logs about a mile—using two trailers, one semi trailer and a double bunk, both steel wheels, plain bearing of my own make. The double bunk trailer has eight wheels and the semi trailer four wheels.

"Each load averages 2500 board feet to the load and I am putting into the pond, 20,000 board feet every ten hours.

"The loads are second growth fir and each load runs about ten tons net.

"I kept close figures on my gas and oil for all of last season hauling logs and timber and I find I used one pint of cylinder oil to every forty miles of road travel and an average of five miles to the gallon of gasoline."

Duplex Flexibility and Applied Power Makes for Economy in Operation and For Steady Going in Hard Places.

Quoting Mr. Smith further—"One time in particular with a load of long piling, I had to go over a bad place in crossing a creek bottom. The Duplex 4-Wheel Drive came through without a single hitch with every hub deep in the mud. The way it took the road-torque with all four wheels pulling reminded me of an alligator crawling through the mud.

"I have never had to use all the power of which the Duplex is capable, so I do not know how much it can do, but it has always come through with its load and has never had to be pulled out.

"I have always been able to deliver on my trucks as specified and can, therefore, honestly recommend the Duplex 4-Wheel Drive to anyone wishing a dependable truck for heavy hauling of this kind."

The Duplex Dealer Will Show You

Go to the Duplex dealer near you and have him demonstrate the Duplex 4-Wheel Drive either by itself or in competition with any truck you care to name.

You want facts—and the Duplex dealer will give them to you—and the Duplex 4-Wheel Drive will back up everything he says.

3½ tons capacity, price $4250, F.O.B. Lansing.

For all round high speed hauling, nothing can beat the world's record Duplex Limited—medium capacity, electrical equipment, pneumatic tires. It ran 935 miles in 24 hours continuous operation on the Indianapolis Speedway, Oct. 1st. Price $2775 F.O.B. Lansing.

Gasoline Power in the Woods

Is Cheaper than Man Power

The machine shown in the illustration will haul or load the logs much more quickly than man power, and at much less expense. This has been proven by actual experience in the woods. It is not a theory—but a positive fact. The saving effected by the use of one of these little machines will soon pay for the machine and leave a handsome margin of profit. Moreover this machine will work right along through the coldest weather of an Ontario winter, and is always ready to give you its maximum service at a minute's notice.

We make these machines in the right size for your work and will gladly give you fuller information on request.

NOTE—These machines are made for steam or electric power also.

Marsh Engineering Works, Limited *Established 1846* **Belleville, Ontario**

Sales Agents: MUSSENS LIMITED, Montreal, Toronto, Winnipeg, Vancouver.

The Three Goodhue Belts

"EXTRA" "STANDARD" "ACME WATERPROOF"

These three brands are made for three different services and each brand is the best quality made from selected hides with the stretch taken out.

"Goodhue Belts" stretch less than any other belt by 15 to 25 per cent. This quality effects a great saving because it is unnecessary to be continually shortening the belt to keep it taut.

"Acme Waterproof" brand is made for the wet places in a mill and will give a remarkable service under the most trying conditions.

When you buy a belt—buy a Goodhue. Prices and particulars on request.

Sturtevant
PUTS AIR TO WORK

Shavings impede production. Here is a plant in Montreal equipped with the Sturtevant system.

Shavings —the Food of the Fire Demon

IT is the accumulation of shavings and sawdust that collect in quantities in the planing mill, that often prove the favorite breakfast food of the Fire Demon.

In fact his appetite is whetted to such an extent that he devours the entire plant.

The planing mill has always been a more or less precarious risk for the fire insurance people, because of—shavings.

Sturtevant (TRADE MARK)

Planing-Mill Exhausters

The modern system that removes the sawdust and shavings the instant they are formed at the tool edge, and hurls them with lightning speed to the boiler room, or other outside points for disposal.

The air in the plant is freed from dust and dirt, the machinery from clogging, refuse or no litter collects on the floor.

Write for Catalogue 261.

Sturtevant
PUTS AIR TO WORK

Give Them to the Winds

PILES of sawdust—bushels and bushels of it littering the floor and machines of your plant. Clouds of dirt and dust in the atmosphere — shavings all over the place.

This condition prevails in many planing mills, causing ill-health among the workers, delay in production, and exposing the whole plant to destruction by fire or explosion.

The installation of a

Sturtevant
(TRADE MARK)

Planing-Mill System

Solves many problems.

It increases the efficiency of both workers and machinery with a corresponding improvement in production.

Write to-day for Special Bulletin 261-C which describes our system now being used by progressive mill men throughout Canada.

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

Factory and Warehouse

147 to 151 Albert Street, Ottawa, Canada

Cold Weather Does Not Affect KLIM

One of the advantages of using Klim, powdered separated milk, in Lumber Camps and Boarding Houses is that it is perfectly dry and will not freeze in coldest weather. It keeps sweet and fresh under all climatic conditions and when made into liquid, by dissolving in water, the natural flavor and consistency of fresh separated milk is restored.

The contents of the compact ten-pound tin will make forty quarts of pure liquid separated milk. These tins are packed six to the case. The cases can be stored in any dry place, the cook keeping a tin in the cookhouse and using the Klim as needed for each day's cooking and on the table.

To make Klim into liquid add the correct quantity of Klim to water and whip with a beater until the powder is dissolved. There is no waste as any quantity of liquid Klim can be made as desired. Klim is clean, wholesome, and convenient. Order it for your Camp from your Supply House. Your cooks will appreciate it.

Showing No. 2 Power Machine

If you are using more than one half a bag of vegetables per day you cannot afford to be without a

Cyclone Vegetable Peeler

This machine is guaranteed to pay for itself within one year, in most cases within a few months.

Now universally used through Canada in the leading Lumber Camps, Mills,, Mines, Industrial Plants, Hotels, Restaurants, Government Institutions, Steamboats, Steamships, both Atlantic and Pacific Ocean lines, etc., etc. Tested and proved by over 14 years on the market.

Write for Circular "L"

We manufacture all kinds of kitchen labour saving appliances also "Burns Steel Ranges" for all purposes.

Established 1865

Machines made in four styles
2 Hand and 2 Power

MILLMEN

and others interested in Steam Power Plants

Whether you contemplate building a new or repairing your old power plant it will pay you to investigate our recently patented Steel Water-Jacket Furnace. This brickless furnace is built of heavy steel plates, spaced apart, forming a water jacket all around, carrying same amount of steam as boiler. Splendidly adapted for use of portable mills as it is easily moved and placed in position. Burns sawdust or mill refuse of any description, while at the same time it generates one hundred per cent. more steam than will any other type of furnace. Conforms to any style or type of boiler, either straight draft return or water tube.

Do you, or do you not want to save half your coal? It's up to you. Ask for particulars.

DEMING BROS.,

Woodstock - New Brunswick

Kirkaldy Test of ALUMINUM GENUINE BABBITT

In a test for ability to carry load, Kirkaldy, the recognized English authority, found that Aluminum Genuine Babbitt withstood a pressure of 24,600 lbs. to the square inch.

In lumber machinery, where the bearings are subjected to especially severe service, such as in lumber-gangs, Aluminum Genuine Babbitt will stand the gaff with practically no effect on the bearings.

For general service, where the bearings are not subjected to such great loads or heavy vibrations as to require Aluminum Genuine, use Manganese Antrifriction Metal.

United American Metals Corp'n

W. G. Harris,
President the Canada Metal Co., Limited

I want you to use

Imperial Genuine Babbitt Metal

For Stickers of highest speed, or Engines of heavy weight and

Harris Heavy Pressure

For all other general purpose work about your mills or factories, because in thirty-five years of practice, I have proven them to be

TRUSTWORTHY

I have been telling you this for many years. Won't you try them?

You have my word, no better Babbitt is made, and I want you to believe me.

Our Factories in

TORONTO MONTREAL WINNIPEG and VANCOUVER

will be pleased to fill your orders.

THE CANADA METAL COMPANY, Limited

He Knows It Will!

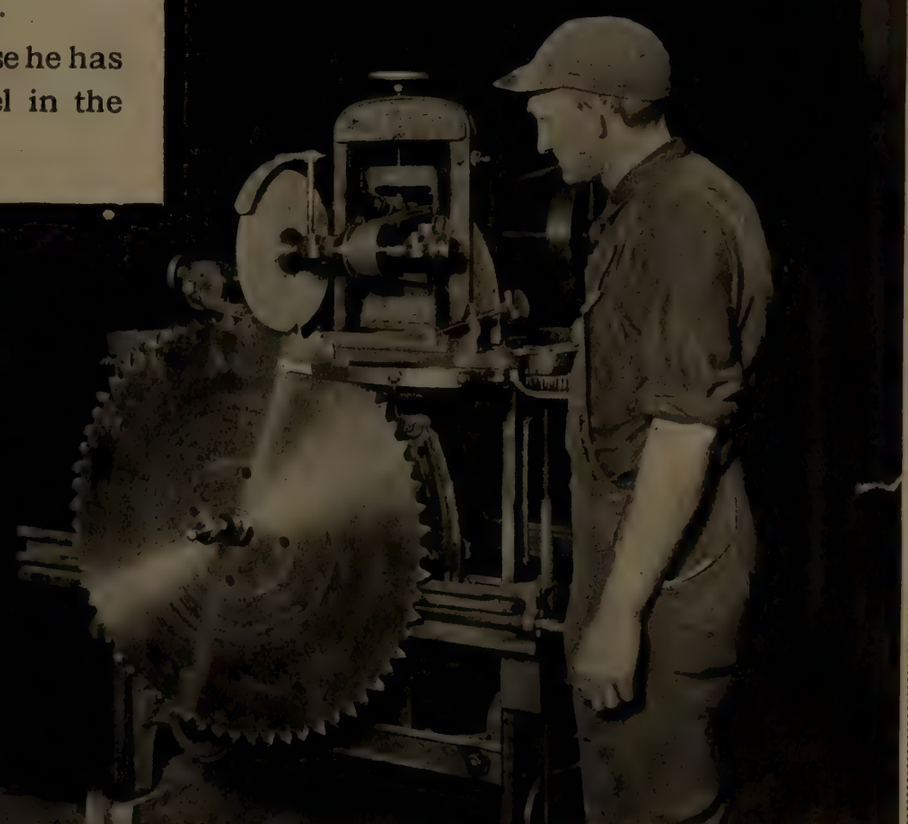
There isn't any question in this filer's mind regarding that Aloxite Saw Gummer.

He knows it is going to cut cool and clean without much more than warming the saw.

He knows it is going to keep those teeth and the gullets true to shape.

He knows that Aloxite wheels are so efficient that the mill foreman won't worry about his saws being right.

He knows because he has the Right Wheel in the Right Place.



Aloxite Saw Gumming Wheels

Better Gummed Saws—Quicker
